

# Service Manual

PDP-507XD

ORDER NO.  
**ARP3396**

PLASMA TELEVISION

# PDP-507XD PDP-507XG

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
PDP-507XD	WYVIXK5	AC 220 V to 240 V	
PDP-507XG	WYVIXK5	AC 220 V to 240 V	
PDP-507XA	WYV5	AC 220 V to 240 V	

For details, refer to "Important Check Points for good servicing".

# 1. NOTES ON SERVICE VISIT

## 1.1 SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

### WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

### NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

### REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

## SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

- When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
- When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
- When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
- Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
- Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.

6. Perform the following precautions against unwanted radiation and rise in internal temperature.

- Always return the internal wiring to the original styling.
  - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
7. Perform the following precautions for the PDP panel.
- When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
  - Make sure that the panel vent does not break. (Check that the cover is attached.)
  - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
8. Pay attention to the following.
- Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

### Leakage Current Cold Check

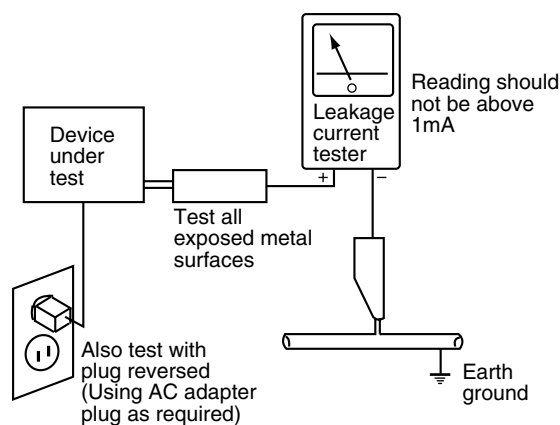

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of  $4M\Omega$ . The below  $4M\Omega$  resistor value indicate an abnormality which require corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

### Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 1mA.

AC Leakage Test

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.**

### PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

## ■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. Power Cord
2. AC Inlet
3. Power Switch (S1)
4. Fuse (In the POWER SUPPLY Unit)
5. STB Transformer and Converter Transformer (In the POWER SUPPLY Unit)
6. Other primary side of the POWER SUPPLY Unit

## ■ High Voltage Generating Point

The places where voltage is 100 V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

The VSUS voltage remains for several minutes after the power to the unit is turned off. These places must not be touched until about 10 minutes after the power is turned off, or it is confirmed with a tester that there is no residual VSUS voltage.

If the procedures described in “10.3 POWER ON/OFF FUNCTION FOR THE LARGE-SIGNAL SYSTEM” are performed before the power is turned off, the voltage will be discharged in about 30 seconds.

POWER SUPPLY UNIT .....	(205 V)
50 X MAIN DRIVE Assy.....	(-180 V to 205 V)
50 X SUB DRIVE Assy.....	(-180 V to 205 V)
50 Y MAIN DRIVE Assy.....	(500 V)
50 Y SUB DRIVE Assy.....	(350 V)
50 SCAN A Assy.....	(500 V)
50 SCAN B Assy.....	(500 V)

- C ■ : Part is Charged Section.  
 ■ : Part is the High Voltage Generating Points other than the Charged Section.

Fig.1 High Voltage Generating Point (Rear view)

## [Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.  
Please be sure to confirm and follow these procedures.

### 1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.  
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.  
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.  
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.  
Please pay attention to your surroundings and repair safely.

### 2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.  
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

### 3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.  
Make sure the proper amount is applied.

### 4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

### 5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

## 1.2 QUICK REFERENCE UPON SERVICE VISIT

### Quick Reference upon Service Visit ① Notes, PD/SD diagnosis, and methods for various settings

#### Notes when visiting for service

##### 1. Notes when disassembling/reassembling

###### ① Rear case

When reassembling the rear case, the screws must be tightened in a specific order. Be careful not to tighten them in the wrong order forcibly. For details, see "Rear Case" in "6. DISASSEMBLY"

###### ② Attaching screws for the HDMI connector

When attaching the HDMI connector after replacing the Main Assy, secure the HDMI connector manually with a screwdriver, but not with an electric screwdriver. If you tighten the screws too tightly with an electric screwdriver, the screw heads may be damaged, in which case the screws cannot be untightened/tightened any more.

##### 2. On parts replacement

###### ① How to discharge before replacing the Assys

A charge of significant voltage remains in the Plasma Panel even after the power is turned off. Safely discharge the panel before replacement of parts, in either manner indicated below:

A: Let the panel sit at least for 3 minutes after the power is turned off.

B: Turn the Large Signal System off before the power is turned off then, after 1 minute, turn the power off.

For details, see "10.3 Power ON/OFF Function for the Large-Signal System."

###### ② On the settings after replacement of the Assys

Some boards need settings made after replacement of the Assys.

For details, see "7. ADJUSTMENT"

##### 3. On various settings

###### ① SR+

After a repair using a PC, be sure to restore the setting for the RS-232C connector to SR+.

###### ② Setting in Factory mode

After a Mask indication into the panel is performed, be sure to set the Mask setting to "OFF" then exit Factory mode.

PD/SD		Change of settings	
Item		No. of LEDs flashing	
		Red	Blue
Panel section	Communication with the panel drive IC		Blue 1
	Communication with the module IIC		Blue 2
	DIGITAL-RST2		Blue 3
	Panel high temperature		Blue 4
Main section	Audio		Blue 5
	Communication with the Module microcomputer		Blue 6
	Main 3-wire serial communication		Blue 7
	Main IIC communication		Blue 8
	Communication with the Main microcomputer		Blue 9
	FAN		Blue 10
	Unit high temperature		Blue 11
	Communication with the D-TUNER		Blue 12
MTB-RST2/RST4			Blue 13
POWER		Red 2	
SCAN		Red 3	
SCN-5V		Red 4	
Y-DRIVE		Red 5	
Y-DCDC		Red 6	
Y-SUS		Red 7	
ADRS		Red 8	
X-DRIVE		Red 9	
X-DCDC		Red 10	
X-SUS		Red 11	
UNKNOWN		Red 15	

#### How to enter Factory mode using the supplied remote control unit

In the same way as with the remote control unit supplied with the 6th-generation model

#### How to enter Integrator mode using the supplied remote control unit

- Enter the Standby mode.
- Press [MENU].
- Press [TV ⏻].

#### How to switch UART ① (Integrator)

- Enter the Integrator mode.
- Display "OFF" using [➡].
- Change the communication speed using [↓], then [➡].

#### How to switch UART ② (During Standby)

- Enter the Standby mode.
- Hold [VOL +] or [VOL -] pressed for 3 seconds.
- Hold [SPLIT] pressed for 3 seconds.
- ④-1 To set to 232C, press [ENTER].
- ⑤-2 To set to SR+, press [HOME MENU].

**Note:** If switching is completed successfully, the red LED will flash twice.

**Note 1:** Use a remote control unit supplied with the 6th-generation models or later.

**Note 2:** Do not hold a key pressed for more than 5 seconds.

#### How to locate several items on the Factory menu

{ }	: Item on the Factory menu
[ ]	: Key on the remote control unit
" "	: Screen indication

##### 1. Confirmation of accumulated power-on time and power-on count

Select {INFORMATION} then {HOUR METER}.  
(After entering Factory mode, press [↓] four times.)

##### 2. Confirmation of the Power-down and Shutdown histories

###### ① Panel system

PD: Select {PANEL FACTORY} then {POWER DOWN}.  
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [↓] three times.)

SD: Select {PANEL FACTORY} then {SHUT DOWN}.  
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [↓] four times.)

###### ② Main Assy

Select {INFORMATION} then {MAIN NG}.  
(After entering Factory mode, press [↓] three times.)

##### 3. How to display the Mask indication

###### ① Mask indication in the panel side

1. Select {PANEL FACTORY} then {RASTER MASK SETUP}.  
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [↓] 8 times.)

2. Press [ENTER], then select a Mask indication, using [↑] or [↓].

###### ② Mask (SG screen) indication in the Main Assy (MAIN VDEC)

1. Select either Input 1 or 2, to which no signal is input (black screen).

2. Select {INITIALIZE} then {SG MODE}. Press [←]. (After entering Factory mode, press [MUTING] three times, then press [↓] once.)  
Then, the indication at the lower right of the screen changes from "OFF" to "ANA AD YCBCR".

3. You can change Mask patterns by pressing [↓] to select {SG PATTERN} then using [←] or [→].

**Note:** When you switch "SG MODE" routes, some displays become monochrome, as they are in Y-signal only mode.

#### Adjustments and Settings after replacement of the Assys (Procedures in Factory mode)

##### 1. Digital Video Assy: Transfer of backup data

- Select {PANEL FACTORY}, {ETC}, then {BACKUP DATA}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, then press [ENTER].)
- Select {TRANSFER}, using [➡], then hold [SET] pressed for at least 5 seconds.
- After transfer of backup data is completed, {ETC} is automatically selected, and the LED on the front panel returns to normal lighting.

##### 2. MAIN Assy : Switching to SR+ from RS-232C

- Enter the Integrator mode. (The way is described above.)
- As SR+ <=> is [OFF] state, switch to [ON] state by using [➡].
- Turn the POWER switch of the main unit off by the remote control.

##### 3. POWER SUPPLY Unit: Clearance of the accumulated power-on count and maximum temperature value

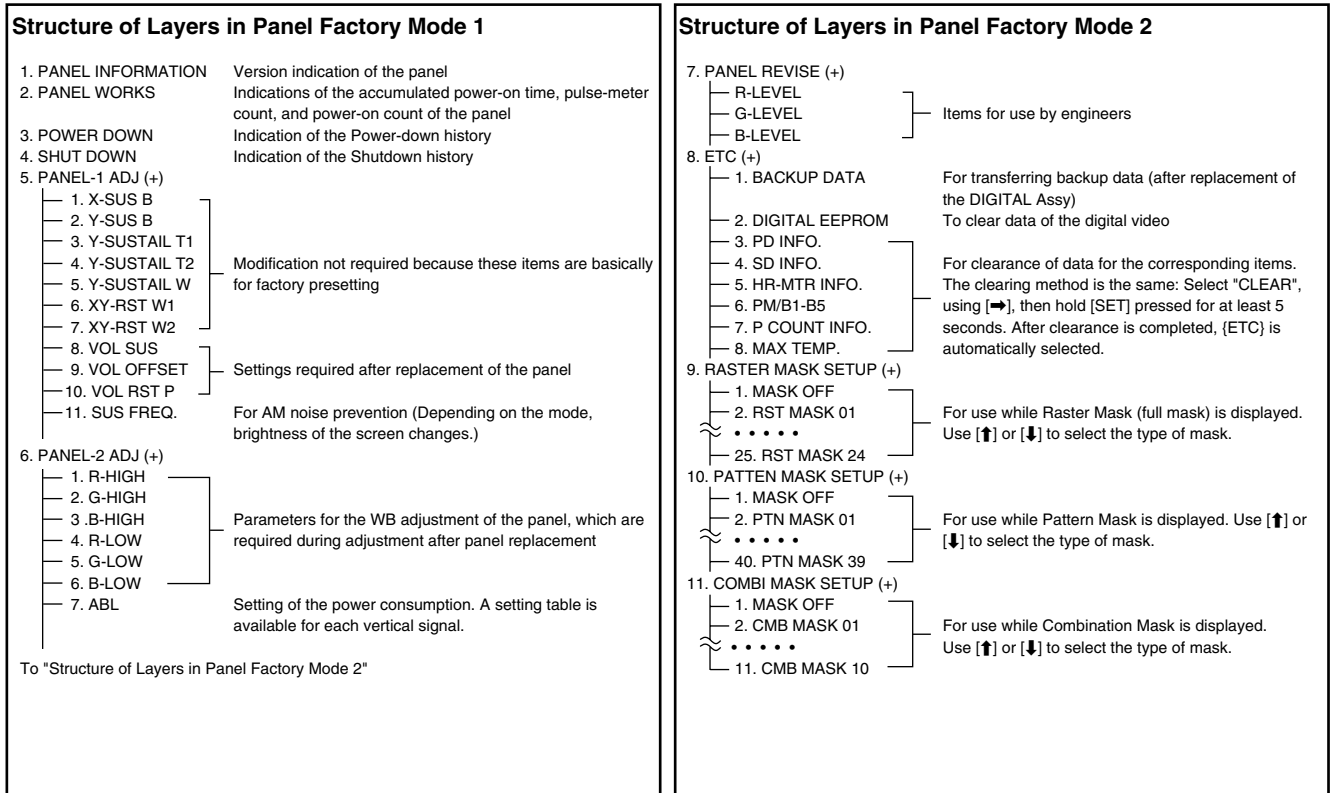

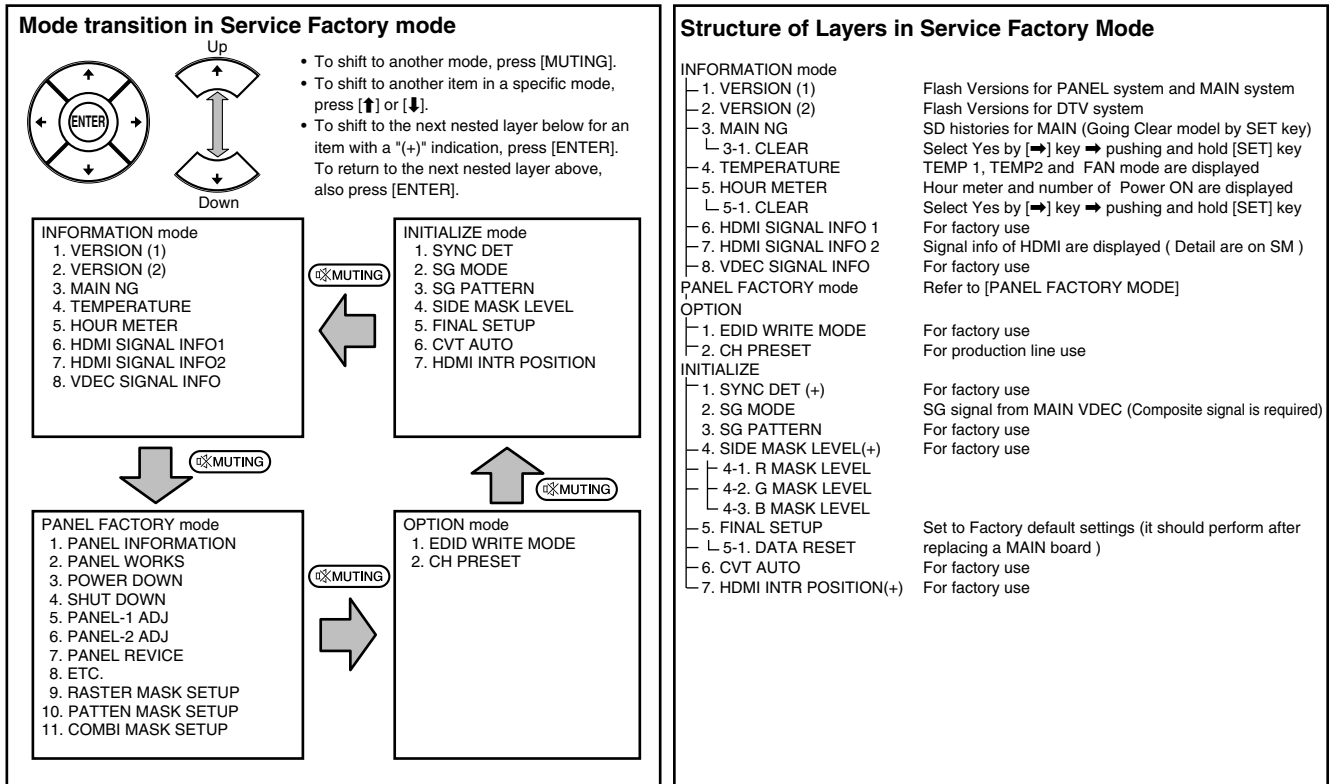

- Select {PANEL FACTORY}, {ETC}, then {P COUNT INFO}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, press [ENTER], then press [↓] six times.)
- Press [➡] to select "CLEAR". Hold [SET] pressed for at least 5 seconds.  
After clearance is completed, "ETC" is automatically selected. Clear the maximum temperature value (MAX TEMP) in the same manner.

##### 4. Other Assys: Clearance of the maximum temperature value

- Select {PANEL FACTORY}, {ETC}, then {MAX TEMP}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, press [ENTER], then press [↓] seven times.)
- Press [➡] to select "CLEAR". Hold [SET] pressed for at least 5 seconds.  
After clearance is completed, "ETC" is automatically selected.

## 2. EXPLODED VIEWS AND PARTS LIST

- NOTES:**
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - Screws adjacent to ▼ mark on product are used for disassembly.
  - For the applying amount of lubricants or glue, follow the instructions in this manual.  
(In the case of no amount instructions, apply as you think it appropriate.)

### 2.1 PACKING SECTION

## (1) PACKING PARTS LIST

Mark No.	Description	Part No.	Mark No.	Description	Part No.
△ 1	Power Cord (2 m)	ADG1214	15	Vinyl Bag	AHG1337

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.  
●The ⚠ mark found on some component parts indicates the importance of the safety factor of the part.  
Therefore, when replacing, be sure to use parts of identical designation.  
●When ordering resistors, first convert resistance values into code form as shown in the following examples.  
Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).  
560 Ω → 56 x 10<sup>1</sup> → 561 ..... RD1/4PU561J  
47k Ω → 47 x 10<sup>3</sup> → 473 ..... RD1/4PU473J  
0.5 Ω → R50 ..... RN2H50K  
1 Ω → 1R0 ..... RS1P1R0K  
Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).  
5.62k Ω → 562 x 10<sup>1</sup> → 5621 ..... RN1/4PC5621F

# 4. BLOCK DIAGRAM AND SCHEMATIC DIAGRAM

## 4.1 OVERALL CONNECTION DIAGRAM (1/2)

- When ordering service parts, be sure to refer to "EXPLODED VIEWS and PARTS LIST" or "PCB PARTS LIST".
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- The encircled numbers denote measuring point in the schematic diagram. Waveforms, refer to service manual (ARP3397).

\* VOFS DC/DC converter and VPRST regulator are controlled by electric volume.

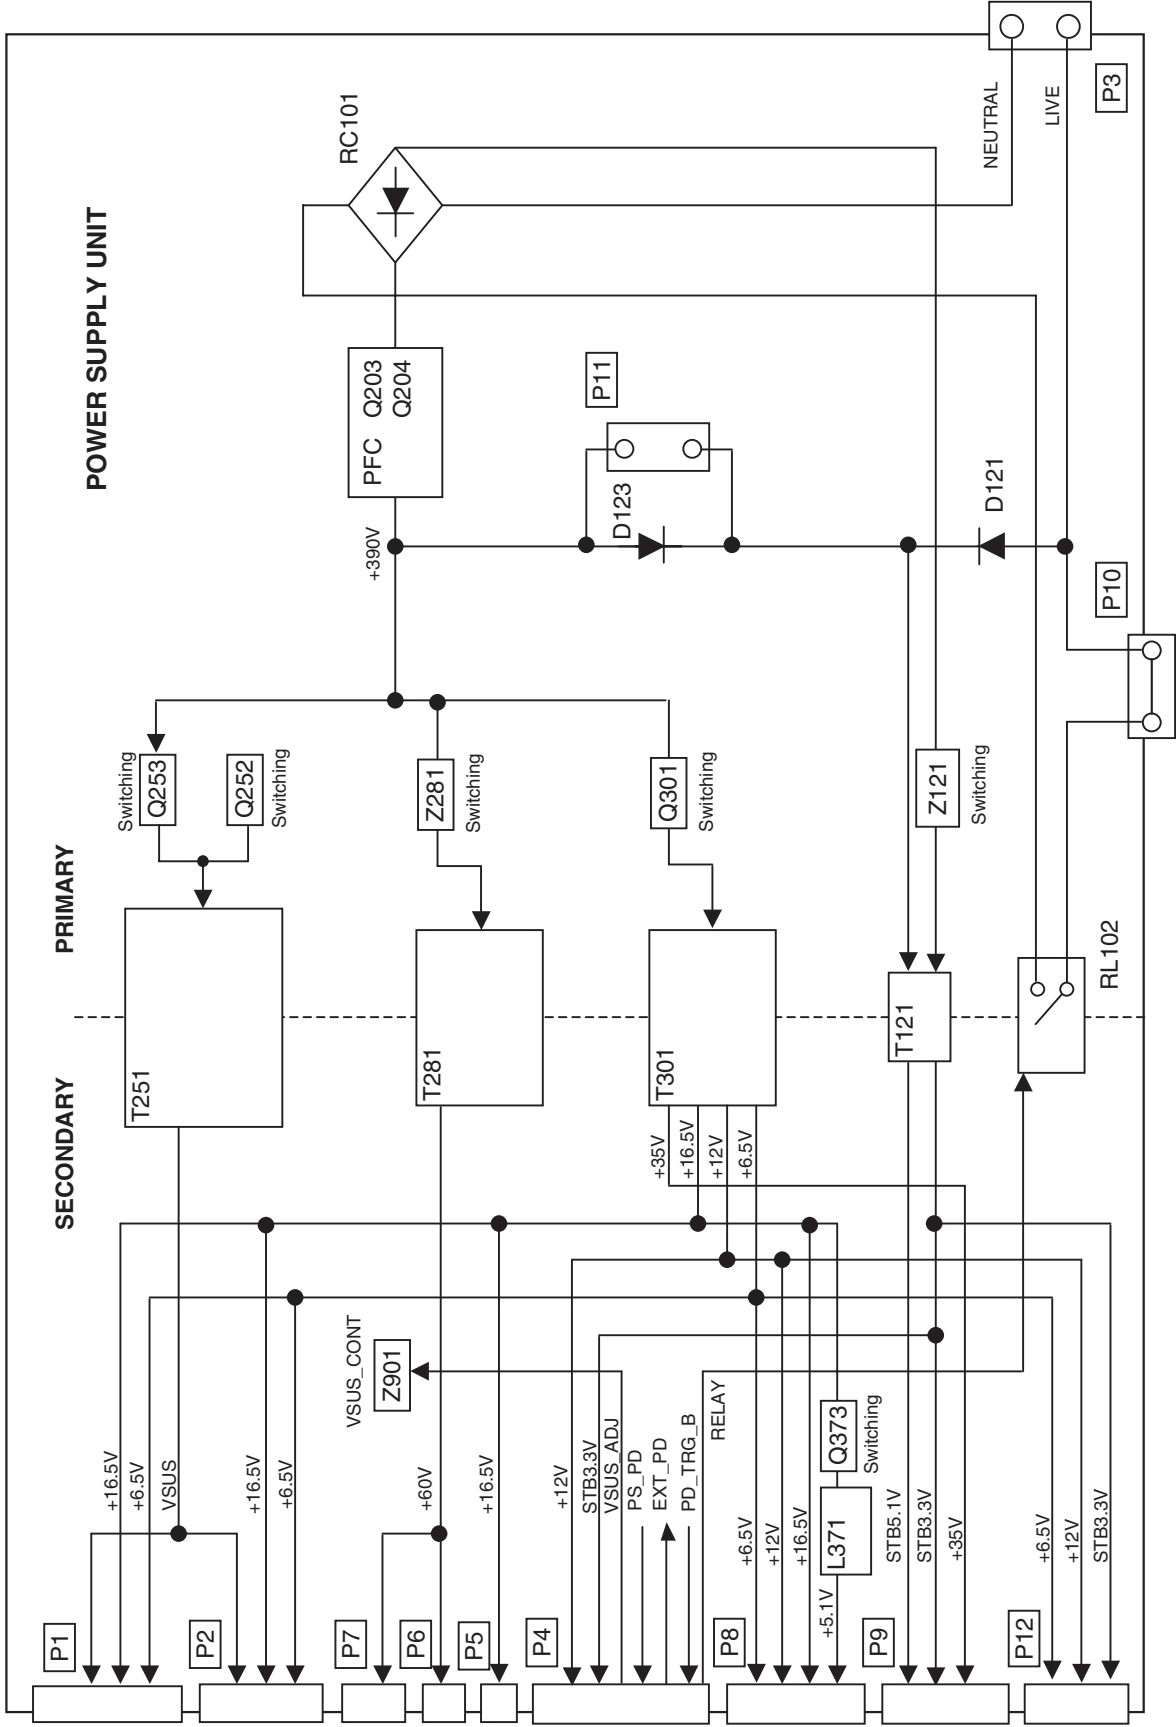

VOFS DC/DC converter and VRN DC/DC converter are generated from 16.5 v, but they do not operate when Vsus is under 100V.

# 5. DIAGNOSIS INFORMATION

## 5.1 THE FLOW OF DIAGNOSIS

### 5.1.1 FLOWCHART OF FAILURE ANALYSIS FOR THE WHOLE UNIT

A

A

In the subsequent diagnostic steps, it is most likely that the multi base section is in failure.

Problems concerning video display

Is the panel mask properly displayed?

No

Failure analysis for the drive system ⇒ DR2

Yes

Check with the animated slanting ramp mask.

B

Is the on-screen display (OSD) properly displayed?

No

Failure analysis for the DIGITAL Assy ⇒ DG1

Yes

Check on the Factory menu.

Is an external video signal displayed properly?

No

Failure analysis for the MAIN Assy ⇒ MA3

Yes

Problems concerning the audio output

Is the audio signal output?

No

Failure analysis for the audio system ⇒ AU1

Yes

C

Specific failure whose cause is difficult to identify in the initial stage

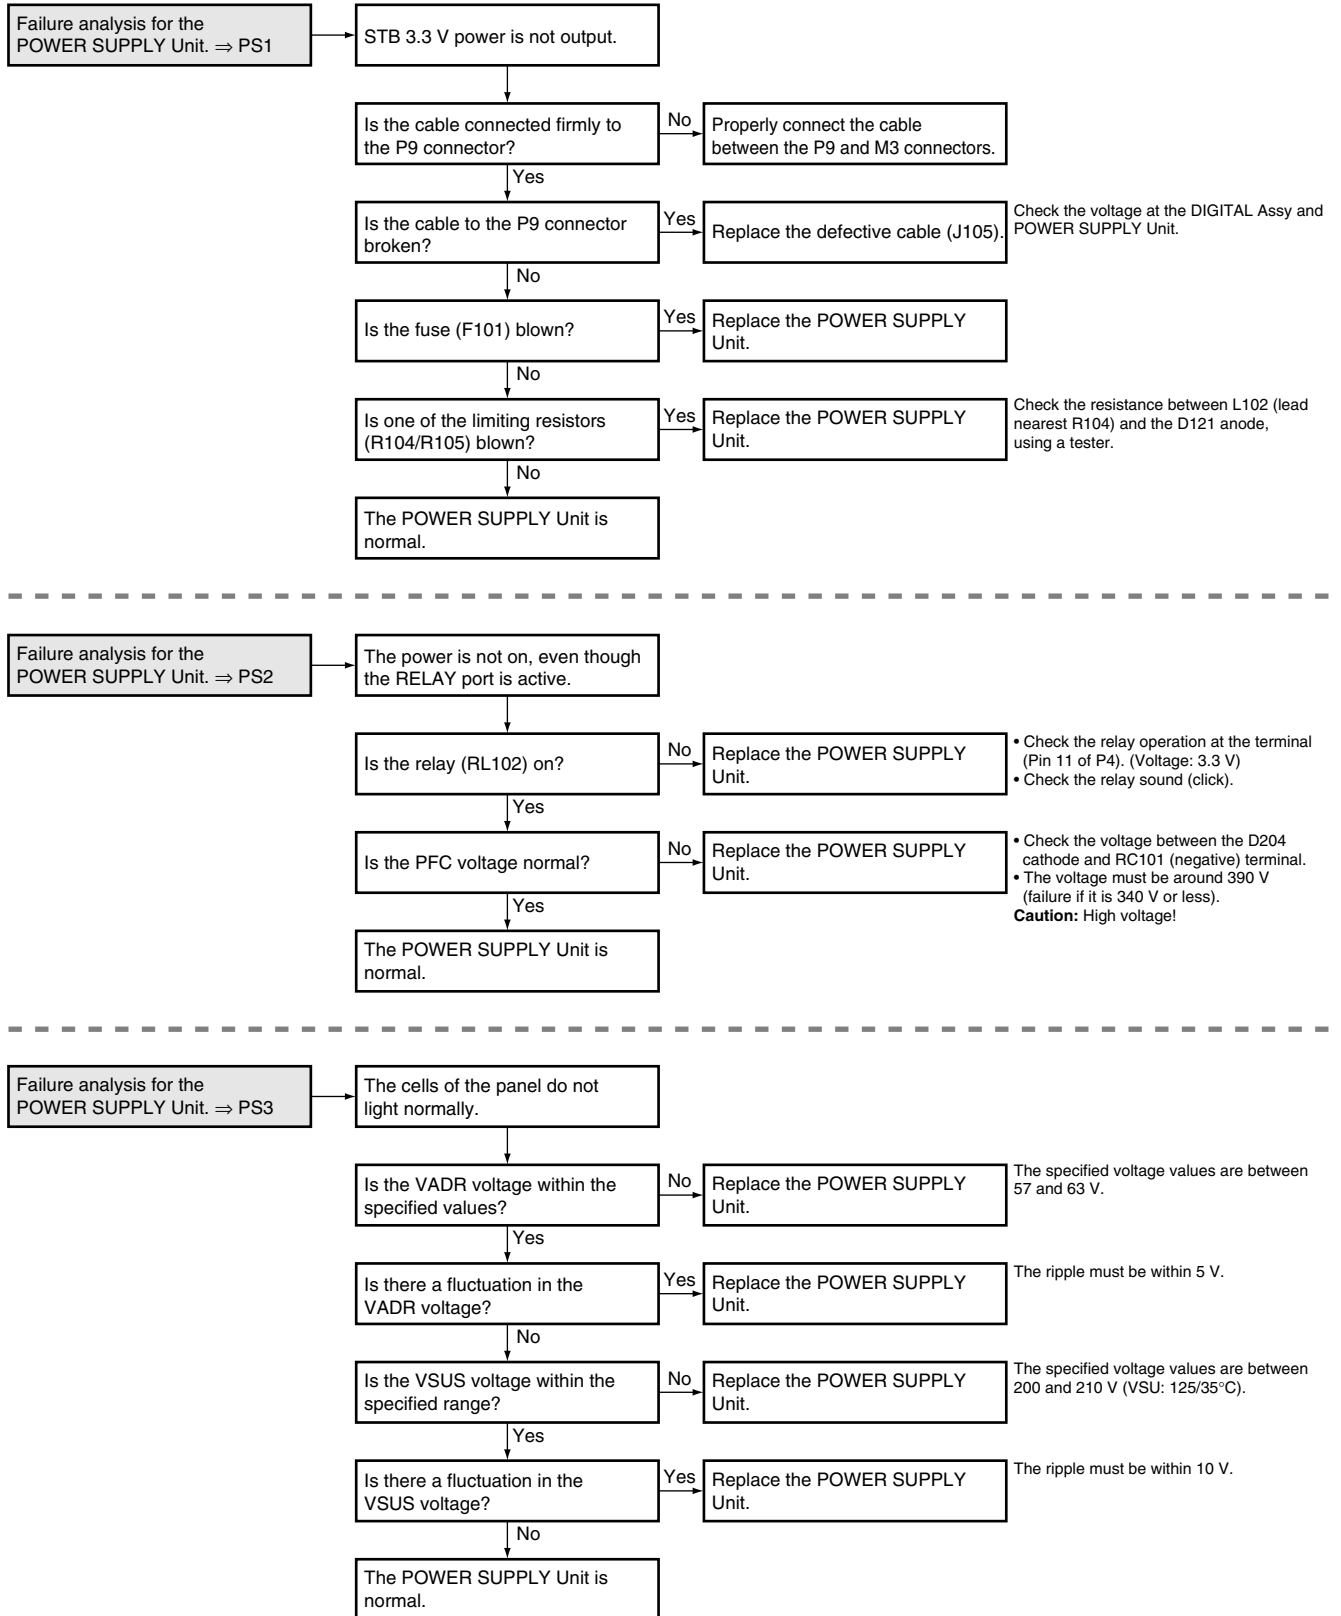

D

E

F

## 5.1.2 FLOWCHART OF FAILURE ANALYSIS FOR THE POWER SUPPLY UNIT

### Flowchart of Failure Analysis for The POWER SUPPLY Unit

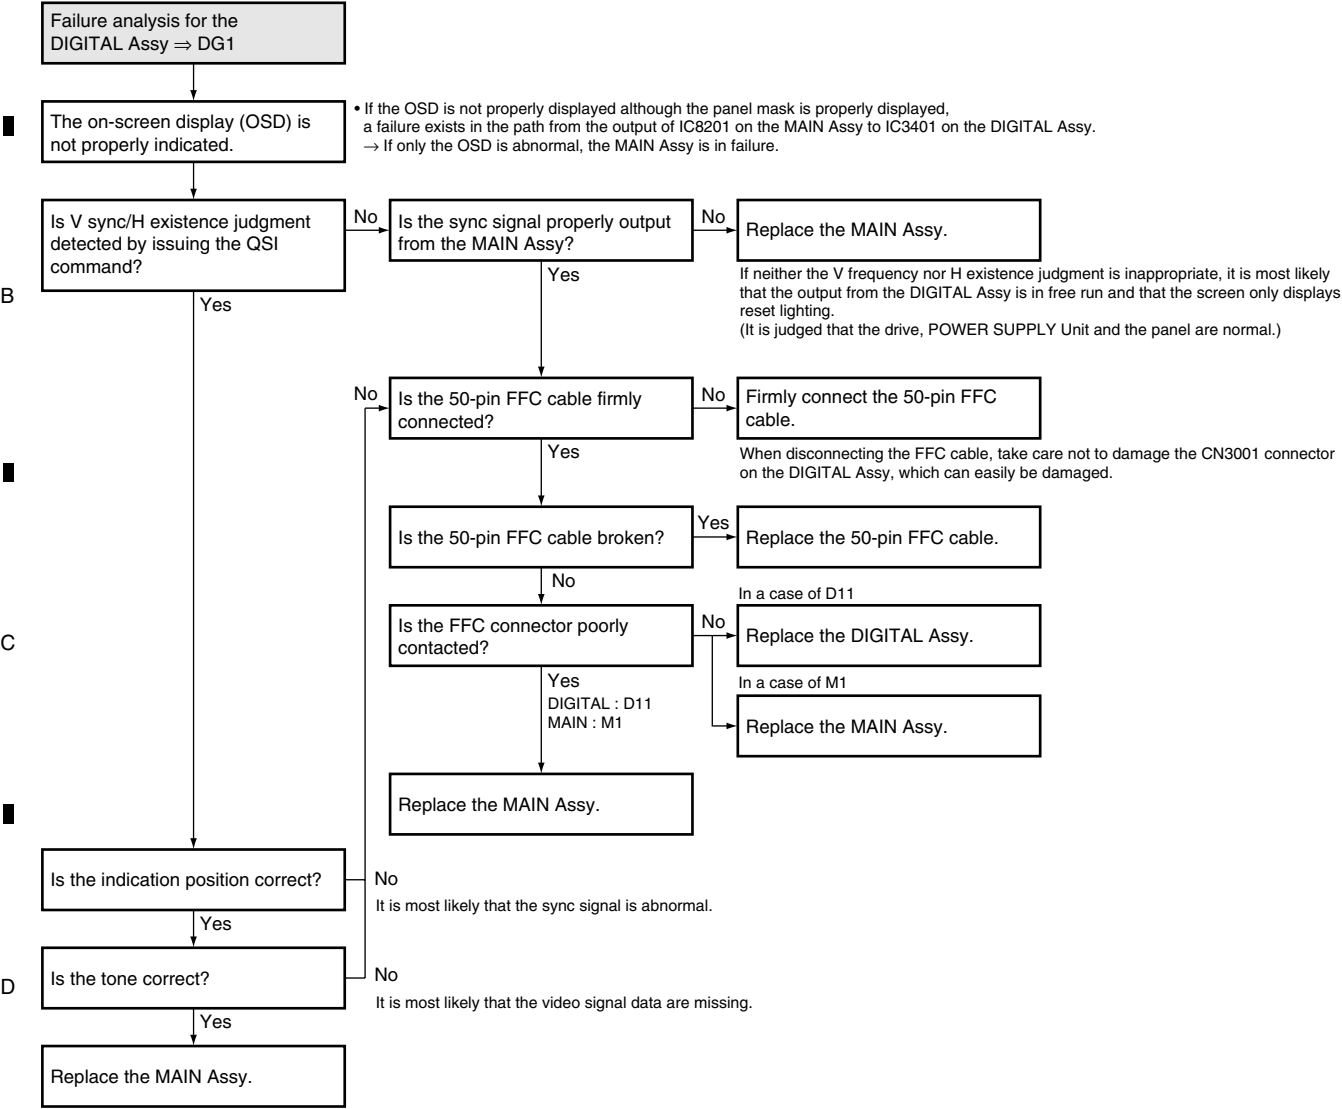

1234

5.1.3 FLOWCHART OF FAILURE ANALYSIS FOR THE DIGITAL ASSY

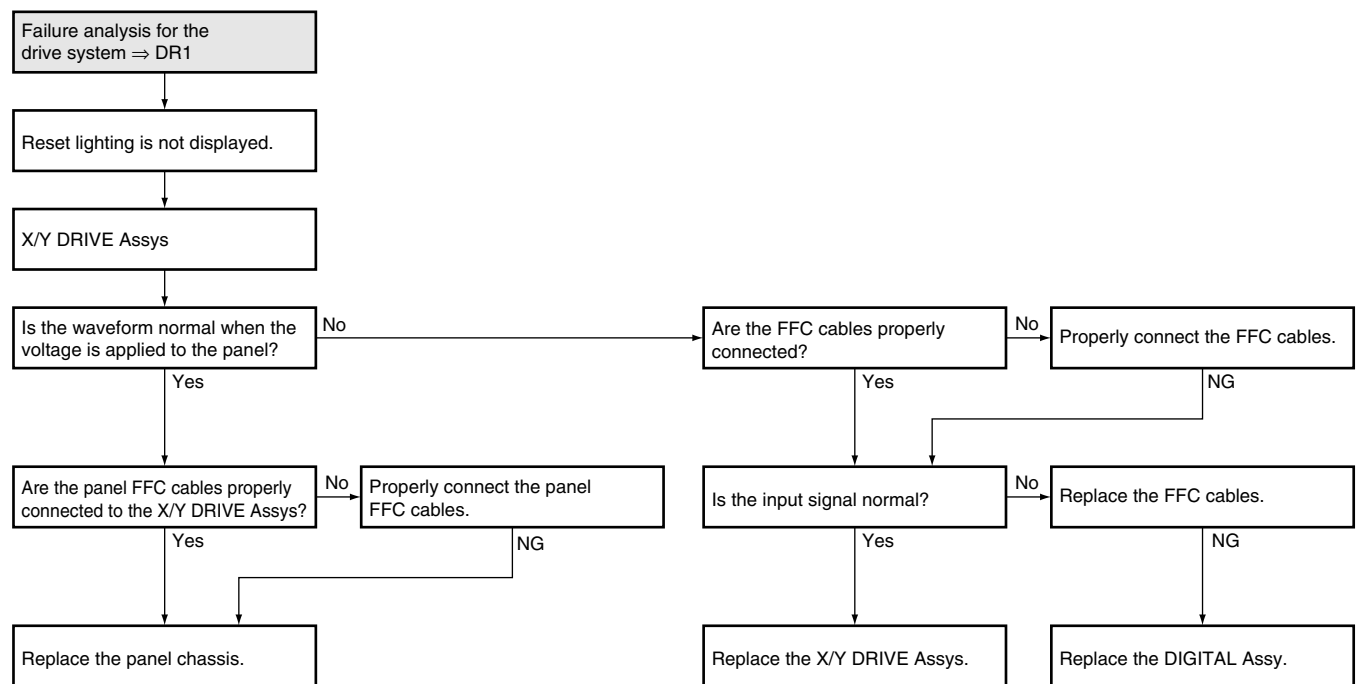

A

Flowchart of Failure Analysis for The DIGITAL Assy

## 5.1.4 FLOWCHART OF FAILURE ANALYSIS FOR THE DRIVE ASSY

Flowchart of Failure Analysis for The Drive Assy

A

Failure analysis for the  
drive system ⇒ DR2

Abnormality across the whole  
screen, such as luminescent spots

Because it is difficult to identify which drive is in failure, follow the flowchart below to check each Assy.

Y DRIVE Assy / SCAN A, B Assy

X DRIVE Assy

ADDRESS Assy

Ⓑ

Ⓒ

B

Are all the connectors properly  
connected?

No

Reconnect the connectors.

NG

Yes

Is the VH set voltage (130 V)  
correctly set?

No

Set the VH voltage correctly.

NG

Yes

C

Is the VOFS set voltage correctly  
set (set value: designated for  
each panel)?

No

Set the VOFS voltage correctly.

NG

Yes

Is the VYRST set voltage correctly  
set (set value: designated for  
each panel)?

No

Set the VYRST voltage correctly.

NG

Yes

D

Another Assy may be in failure.

Yes

Is the waveform normal when the  
voltage is applied to the panel?  
(See the oscilloscope photos.)

No

Ⓓ

Is the input signal normal?  
(See the oscilloscope photos.)

No

Replace the FFC cables.

NG

Yes

Replace the DIGITAL Assy.

E

Is the waveform of the control  
signal from the SCAN Assy  
normal?  
(See the oscilloscope photos.)

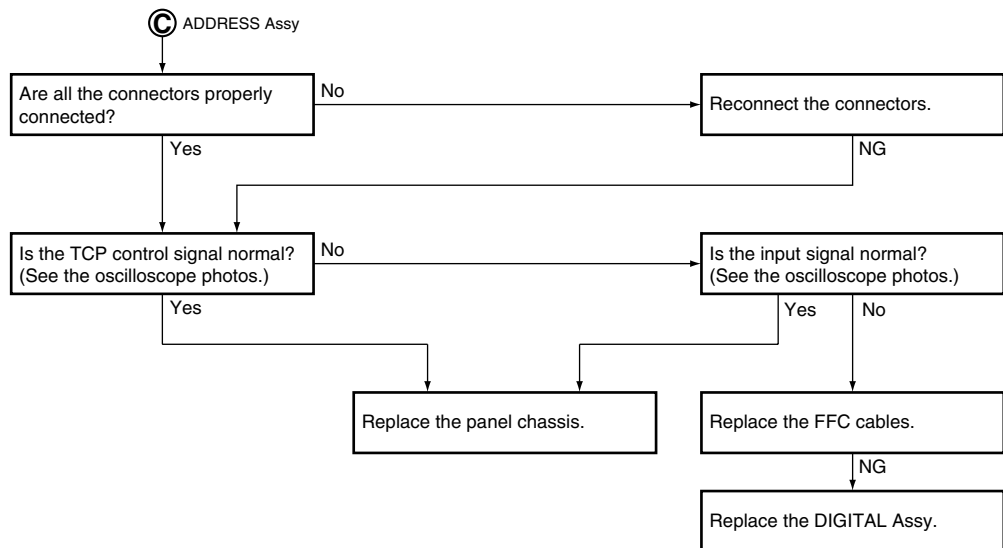

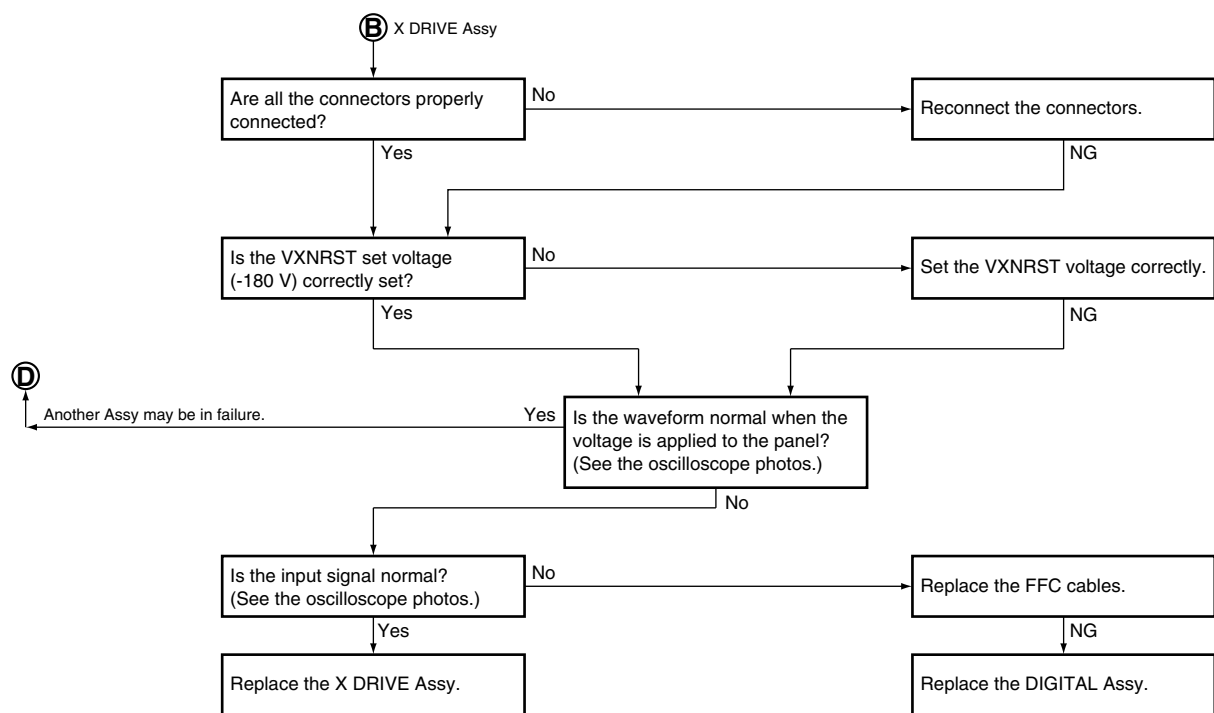

No

Replace the Y DRIVE Assy.

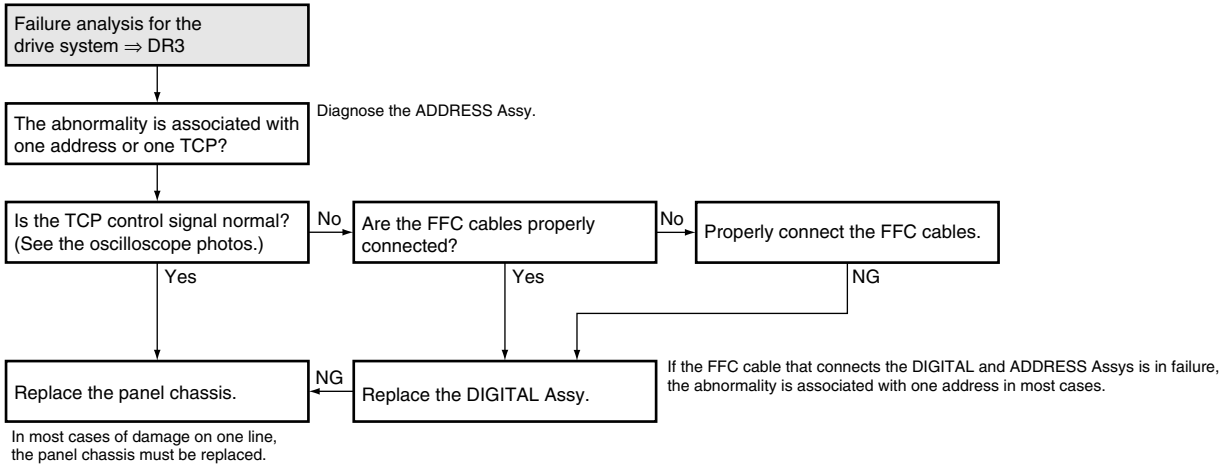

Yes

Replace the SCAN IC.

F

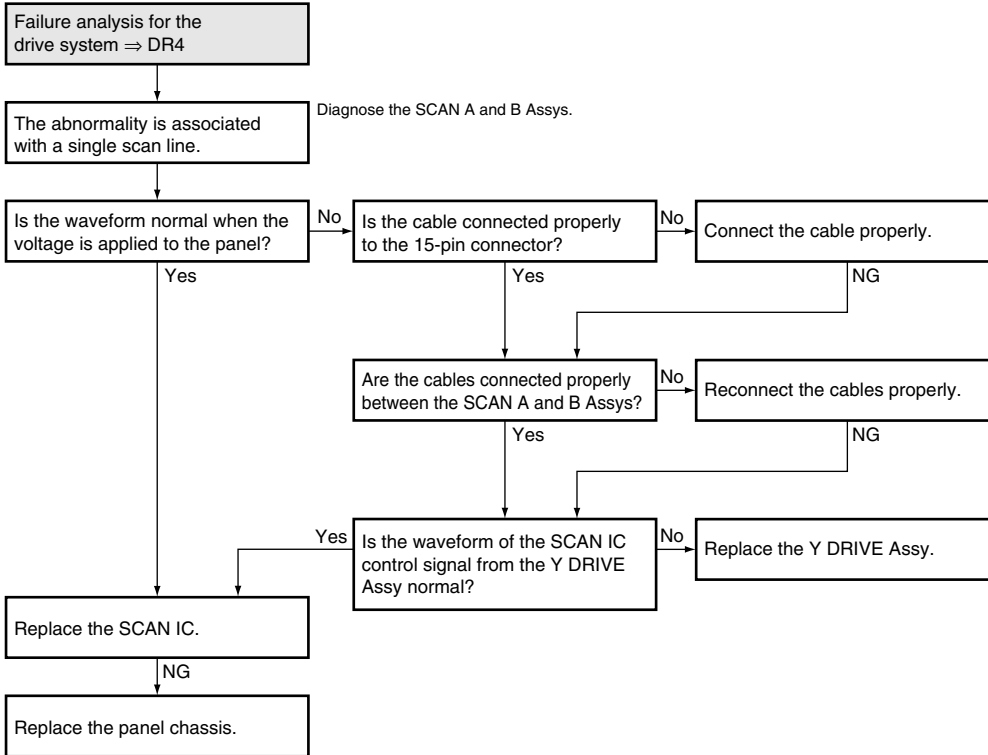

A

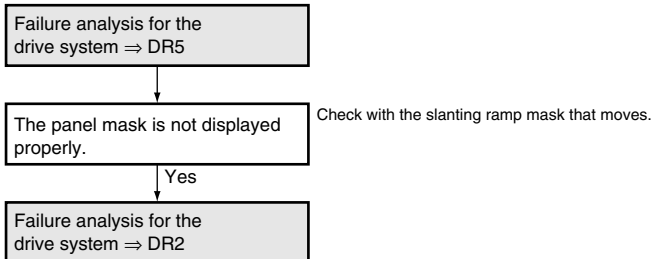

B

C

D

E

F

## Flowchart of Failure Analysis for The Video System

### ● Waveforms

Input signal: PAL Color-bar (S terminal)

## Flowchart of Failure Analysis for The Video System

A

### No video from component

⇒ COMP/PC1

Image for the component signal is not displayed.

Yes

Is the function corresponding to selected signal input selected?

No

Select the corresponding signal with the input selector.

Yes

Has the signal arrived at IC4901 ?  
(pins 2, 4, 6) (22) (23) (24)

No

Check the flexible cables between the CN8802 and CN4004 or between CN9003 and CN4005 or around of pin jack.

No

Replace the flexible cable.

Yes

Which signal is not output, main or sub signal?

Sub

Is the screen of main side Analog/Digital TV?

No

Specifications that does not display in the sub-side.

Main

Yes

Is a signal output from IC4901?  
(pins 41, 43, 45) (25) (26) (27)

No

Check around IC4901 and check the communications between IC4901 and the microcomputer. If there was no problem, replace the MAIN Assy.

Yes

Has the signal arrived at IC5301?  
(pins 43, 48, 54) (28) (29) (30)

No

Check the circuit between IC4901 and IC5301. If there was no problem, replace the MAIN Assy.

Yes

Is the communication between each IC (VDEC, ASIC) on the MAIN Assy and the microcomputer normal?

No

Check around the IC that is found to have a failure in communication and the microcomputer. If there was no problem, replace the MAIN Assy.

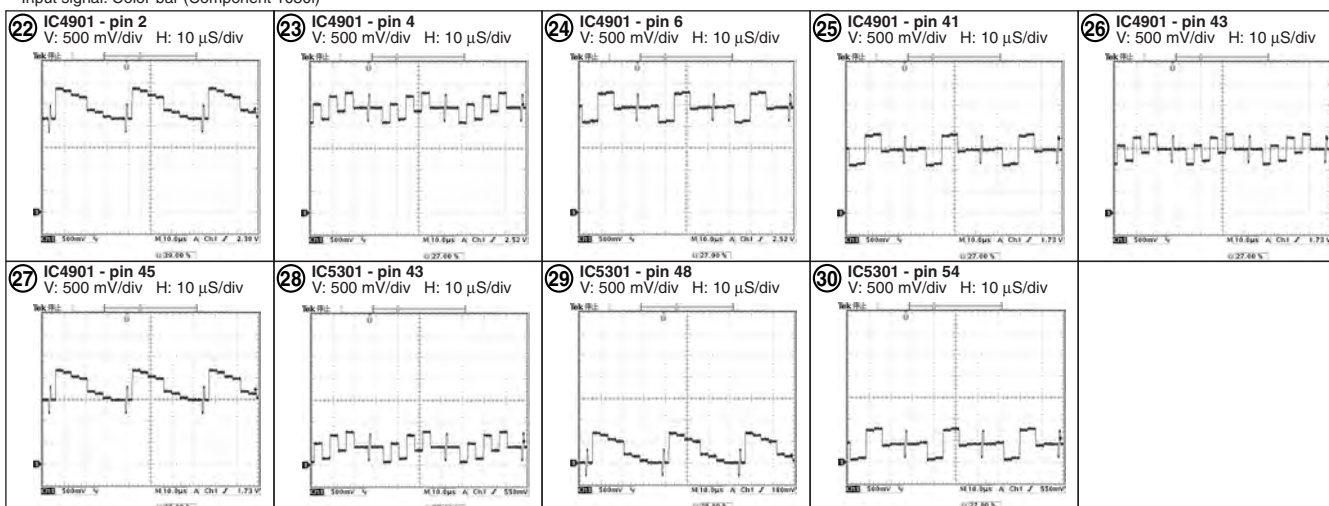

Yes

Replace the MAIN Assy.

D

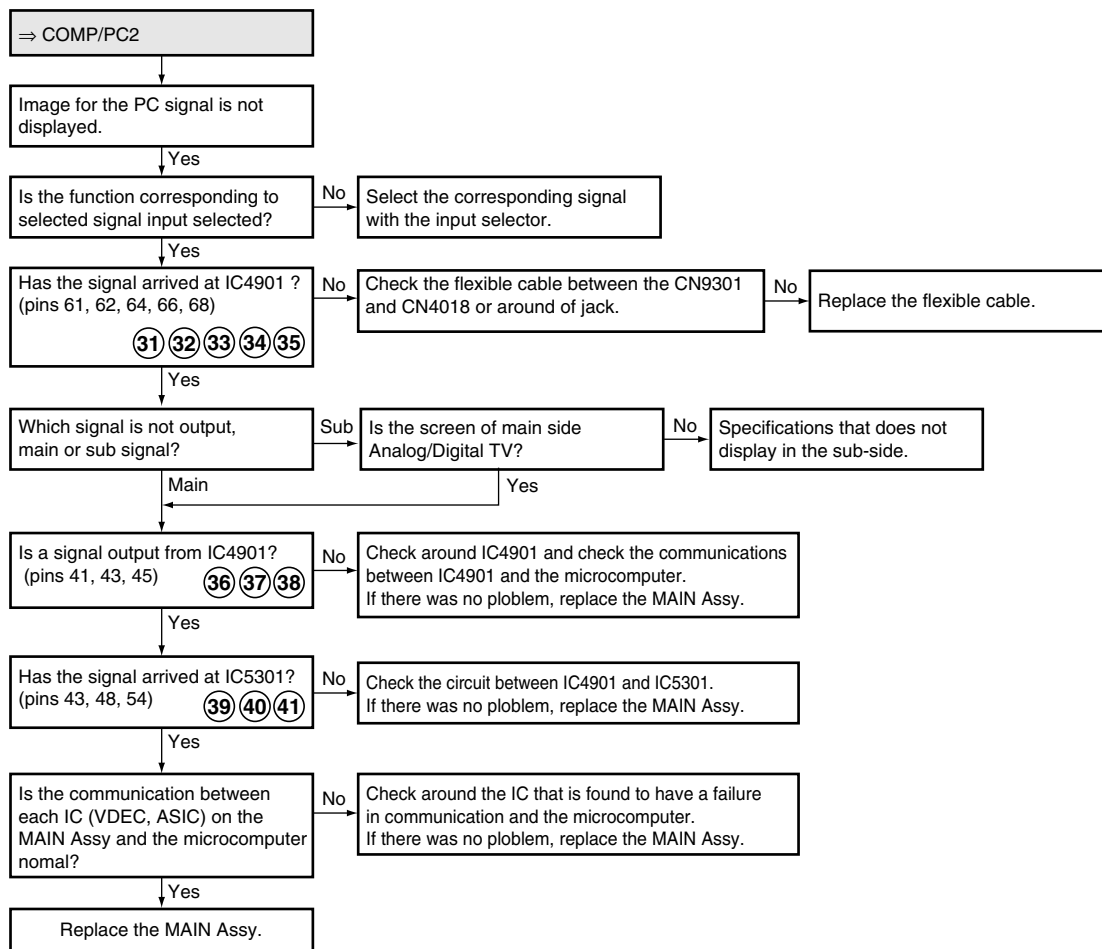

### Waveforms

Input signal: Color-bar (Component 1080i)

### • Waveforms

Input signal: Color-bar (PC XGA/60 Hz)

## Flowchart of Failure Analysis for The Video System

A

### DTV doesn't work

⇒ DTV

DTV (Digital Terrestrial Video)  
doesn't operate.

Yes

Is the function corresponding to  
selected signal input selected?

No

Select the corresponding signal  
with the input selector.

Yes

Has the symptom been settled  
when the Digital RF IN terminal  
and Input cable are checked?

No

Poor contact of the terminal part  
or input cable is defective.

Yes

Has the symptom been settled when the FFC between  
CN6003 and CN4013 is checked or replaced?  
Has the symptom been settled when the cable between  
CN6000 and CN4017 is checked or replaced?

No

Poor contact of the connector, or  
FFC or cable is defective.  
Replace FFC or cable.

Yes

Has the symptom been settled  
when the R07 DT Assy is replaced?

No

The R07 DT Assy is defective.  
Replace the R07 DT Assy.

Yes

Replace the MAIN Assy.

C

D

E

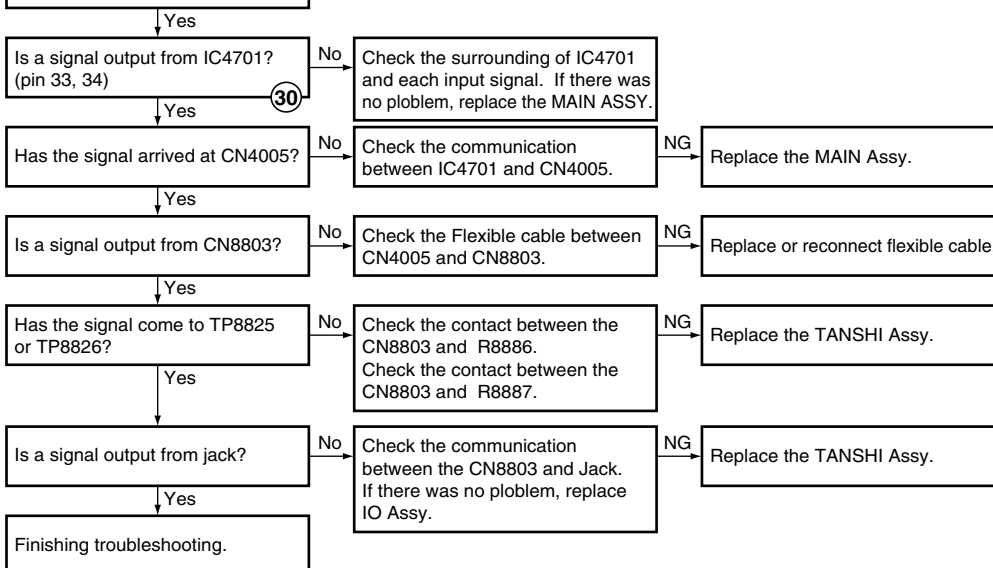

F

### Flowchart of Failure Analysis for The Audio System

#### No audio from monitor out

⇒ MONI\_A

The sound is not emitted audio out.

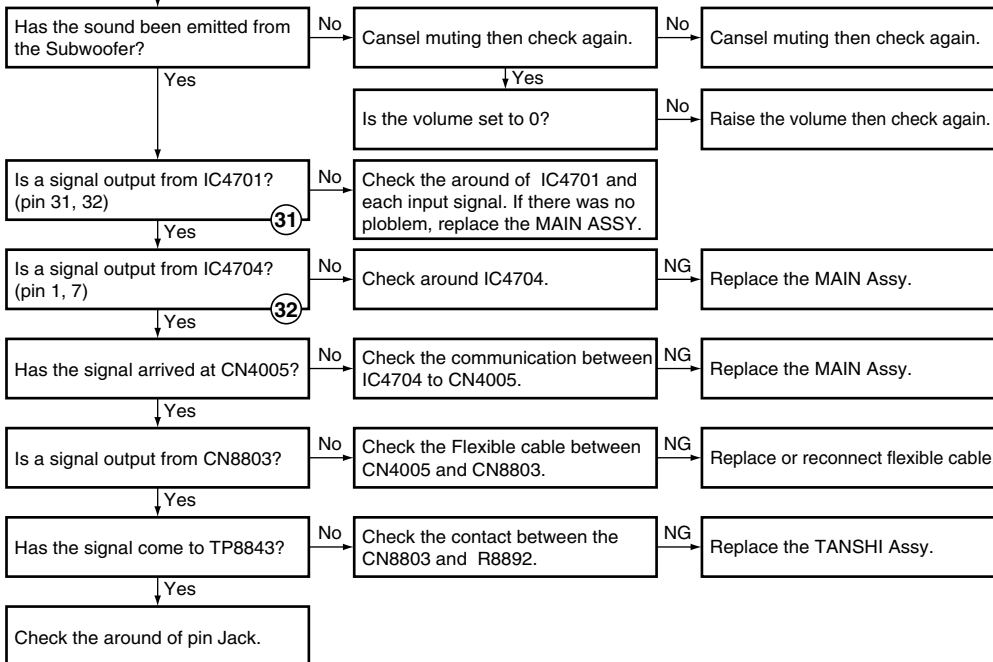

#### Waveforms

Input signal: 1kHz  
Sound volume is fixed to 25.

#### No audio output from subwoofer

⇒ SUB-W

#### Waveforms

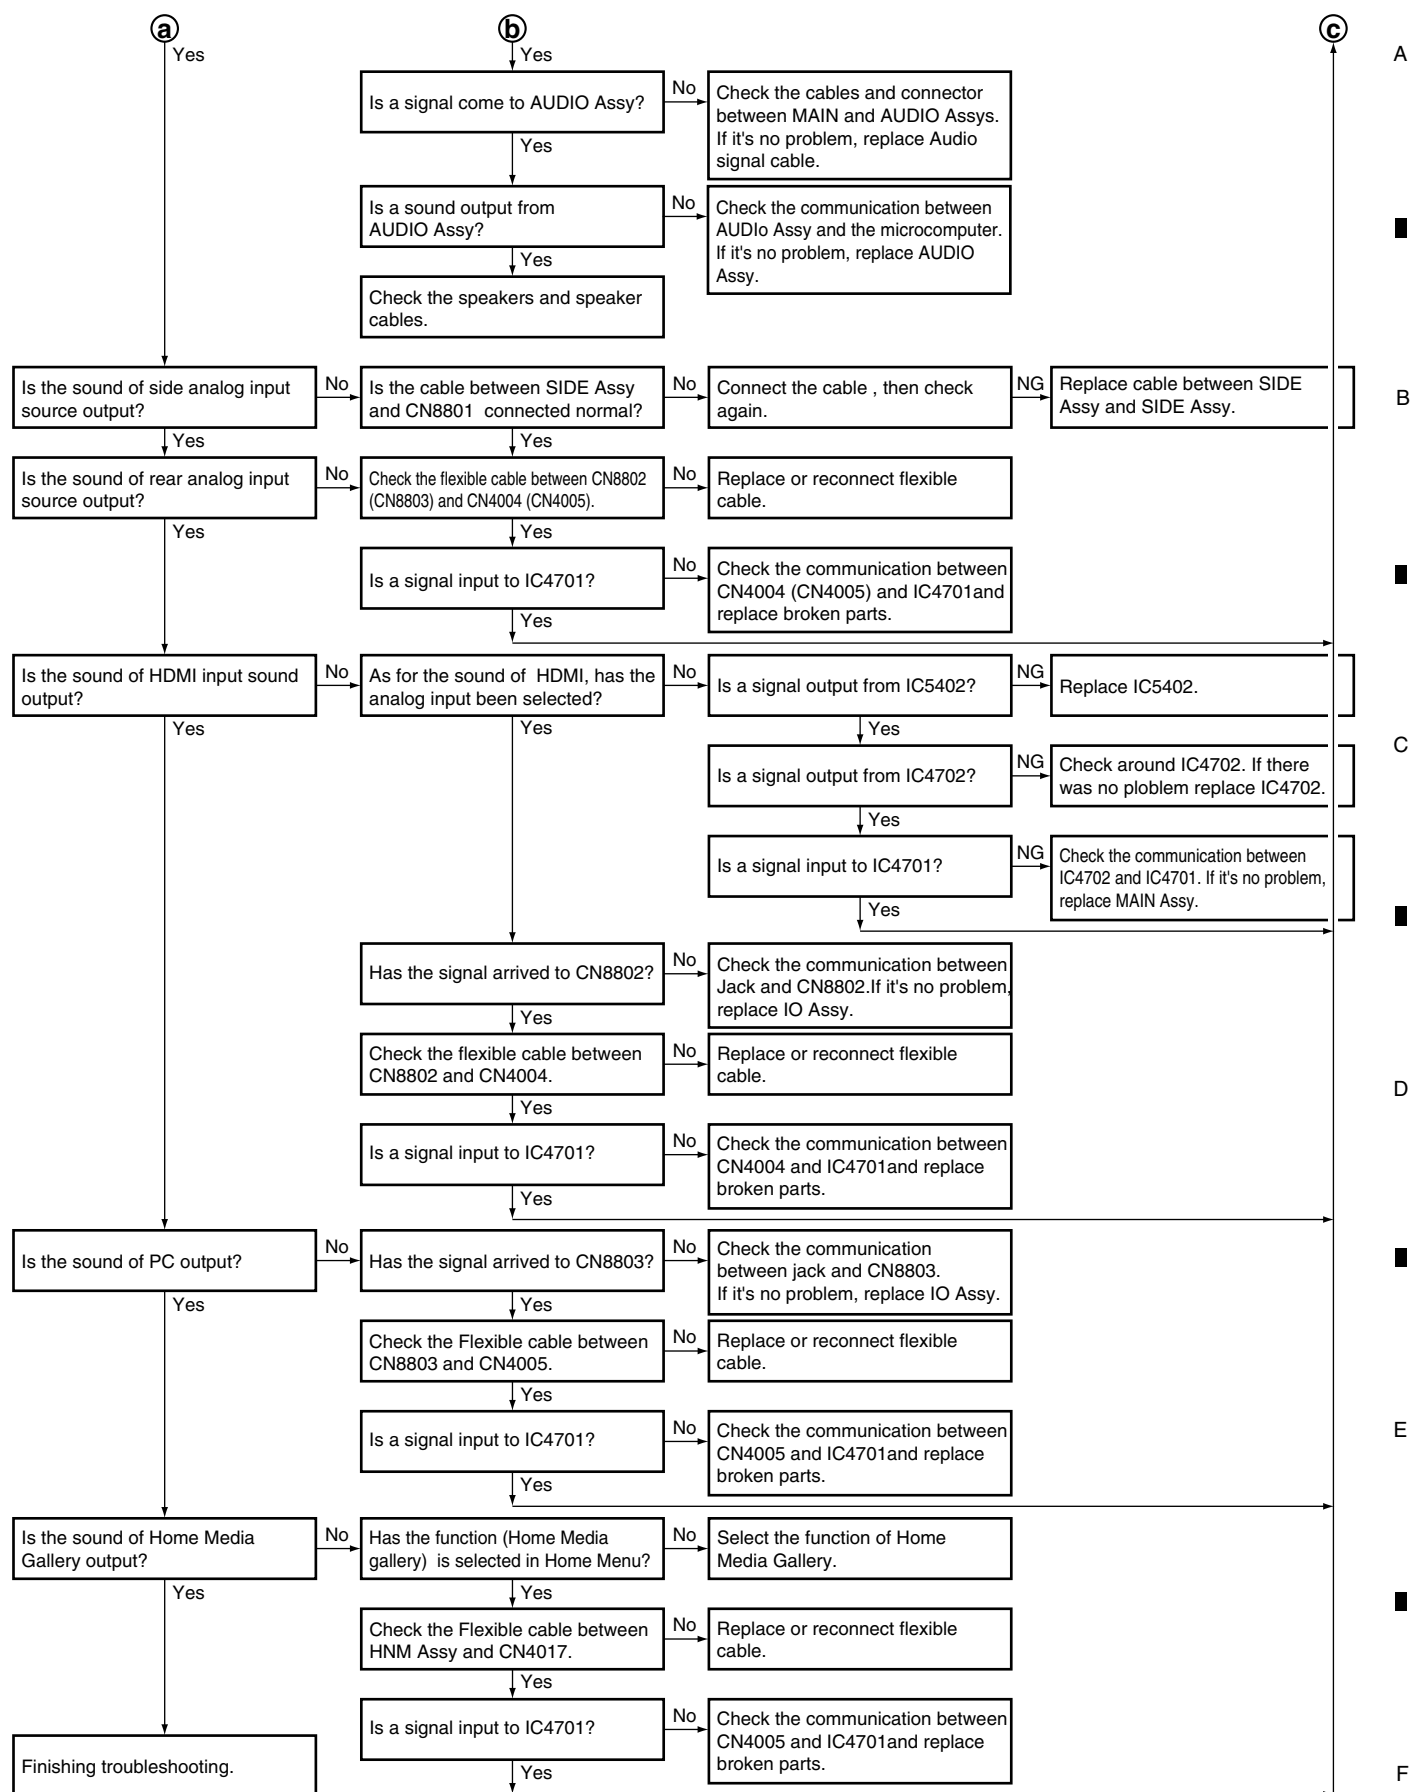

Input signal: 100 Hz  
Sound volume is fixed to 25.

## F

## ● Waveforms

Input signal: 1kHz  
Sound volume is fixed to 25.

## DTV doesn't work

⇒ DTV

DTV (Digital Terrestrial Video)  
doesn't operate.

Yes

Is the power-supply voltage of  
CN4002 normal?

No

Check between CN4002 and  
P8 (POWER SUPPLY Unit).

Yes

When power ON, is RESET\_DT  
(IC8401 - pin 159) Low after  
D+3.3V standing up?

No

Check around IC6902.

Yes

Do you communicate by TXD\_DT  
(IC8401: 103) and RXDDT  
(IC8401: 102)?

No

Check between IC8401 (pin 102,  
103) and IC6301 (pin 305, 406).  
Exchange IC6301.

NG

Replace the MAIN Assy.

Yes

Is the signal from IC6301 to  
IC7201?

No

Check between IC6301 and  
IC7201. Exchange IC6301 if there  
is no problem.

Yes

Is the signal input from IC7201 to  
IC8001?

No

Check between IC7201 and  
IC8001. Exchange IC6301 if there  
is no problem.

Yes

Has the symptom been settled  
when the MAIN Assy is replaced?

No

The panel is defective.

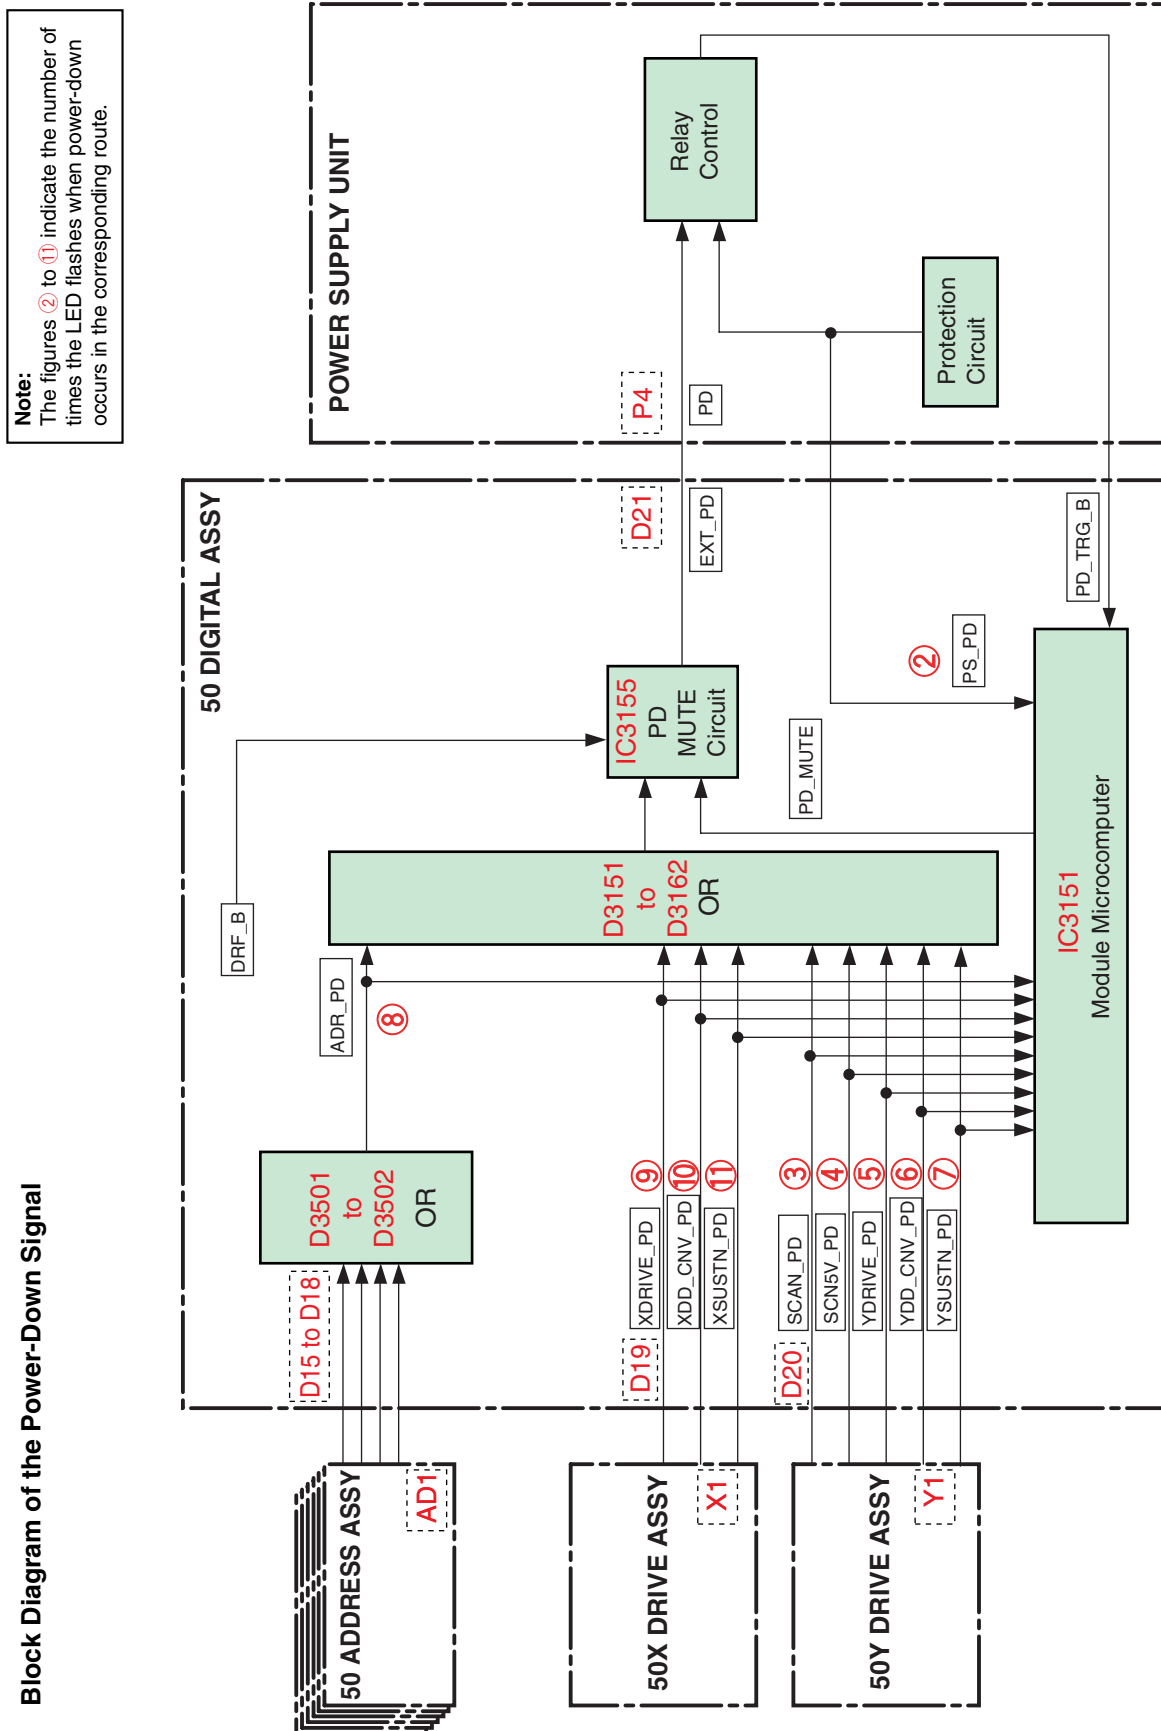

Yes

Finishing troubleshooting.

## 5.2 POWER DOWN

### 5.2.1 BLOCK DIAGRAM OF THE POWER-DOWN SIGNAL

#### ■ Block Diagram of the Power-Down Signal

## 5.2.2 POWER DOWN OF FAILURE ANALYSIS

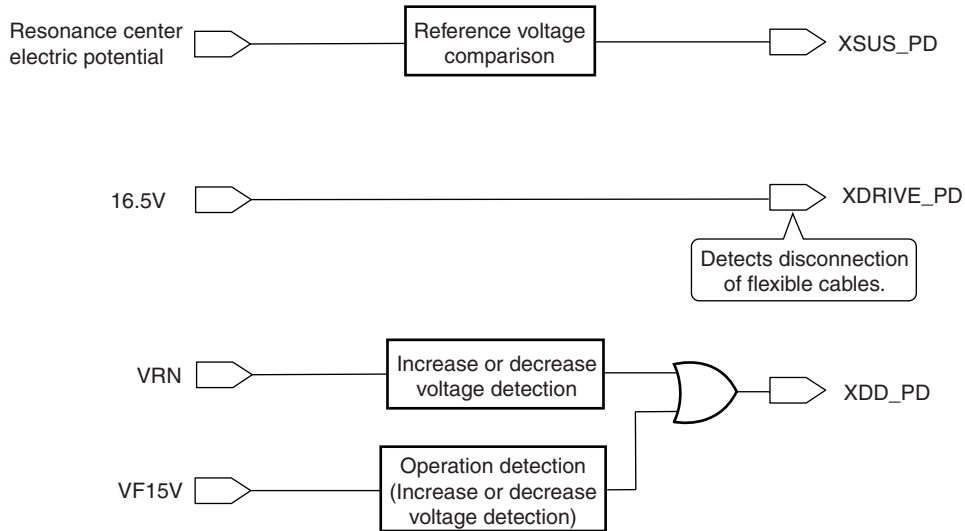

### Prediction of failure symptoms when a PD (power-down) is generated

LED Flashing Count	PD Circuit	Checkpoint	Main Cause
2	Power supply PD	POWER SUPPLY Unit	Failure in the POWER SUPPLY Unit
3	SCAN PD	50 SCAN A, B Assy	SCAN IC is damaged (short-circuiting between VH and GNDH)
		50Y DRIVE Assy	Connectors disconnected between the POWER SUPPLY Unit and the Y DRIVE Assy Connectors disconnected between the DIGITAL and the Y DRIVE Assys Failure in the VH power
4	IC5V PD	50SCAN A, B Assy	SCAN IC is damaged (short-circuiting between IC5V and GNDH) Disconnection of the scan-bridge (15-pin) connector
		50Y DRIVE Assy	Failure in the photo coupler Abnormality in the IC5V DC/DC converter
5	Y-DRIVE PD	50Y DRIVE Assy	Abnormality in the 16.5 V power
6	Y DCDC PD	50Y DRIVE Assy	Abnormality in the VOFS DC/DC converter
			Abnormality in the VPRST DC/DC converter
			Abnormality in VC_15V DC/DC converter
7	Y SUS PD	50Y DRIVE Assy	Abnormality in the DK module
			Abnormality in the control signal line
8	Address PD	50 ADDRESS Assy	Short-circuiting of Vadr TCP damaged
9	X-DRIVE PD	50X DRIVE Assy	Connectors disconnected between the DIGITAL and the X DRIVE Assys
			Abnormality in the 16.5 V power
10	X DCDC PD	50X DRIVE Assy	Abnormality in VC_15V power
			Abnormality in VXNRST power
11	X SUS PD	50X DRIVE Assy	Abnormality in the DK module
			Abnormality in the control signal line
			Connectors disconnected between the POWER SUPPLY Unit and the X DRIVE Assy

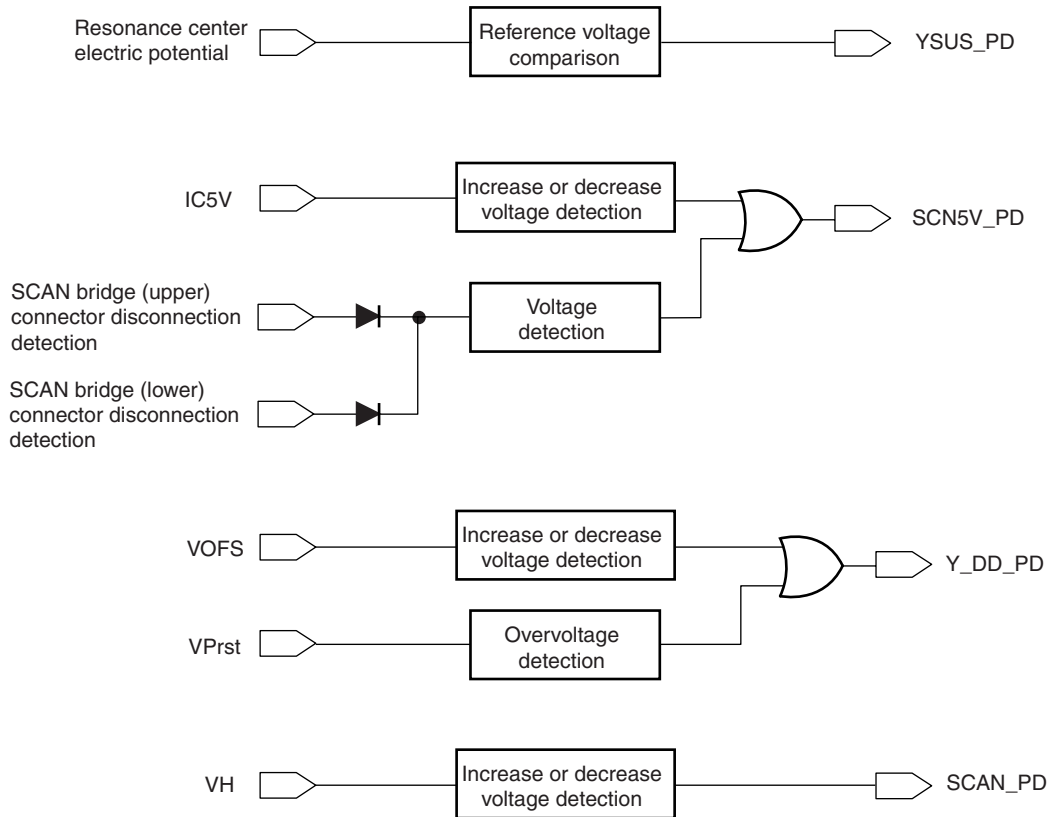

### How to distinguish which connector is disconnected

## 5.3 SHUT DOWN

### 5.3.1 BLOCK DIAGRAM OF THE SHUT-DOWN SIGNAL

#### Block Diagram of the Shutdown Signal

Block Diagram of the Shutdown Signal

Note : The figures ① to ⑬ indicate the number of times the LED flashes when shut-down occurs in the corresponding route.

## 5.3.2 SHUT DOWN OF FAILURE ANALYSIS

Frequency of LED Flashing	Major Type	Detailed Type	Log indication in Factory Mode		Checkpoint	Possible Defective Part	Remarks
			MAIN	SUB			
Blue 1	Abnormality in the Sequence Processor	Communication error		RTRY	CLK, SQ/TXD, SQ, etc.	IC3151, IC3401	SQ, IC communication not established
		Drive stop	SQ-IC	SQNO	Check if the video sync signal is input to IC3401.	CN9001, IC3401	If the signal detection by the module microcomputer is properly performed, the unit operates on an external sync.
		Busy		BUSY	BUSY_SQ	IC3401	If BUSY_SQ remains high, a shutdown is generated.
Blue 2	Failure in IIC communication with the module microcomputer	Incoherent version (hardware, software)		VER-HS	Check the model number of the DIGITAL Assy and the destination of the sequence processor.	IC3301, IC3401	The written SQ_PROG is incoherent with data on the DIGITAL Assy.
		DIGITAL Assy EEPROM		EEPROM	IIC communication line of IC3156	IC3151, IC3156	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
		SENSOR Assy EEPROM	MD-IIC	BACKUP	IIC communication line of IC3652	IC3151, IC3652	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
Blue 3	Abnormality in RST2 power decrease	DAC		DAC	IIC communication line of IC3157	IC3151, IC3157	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
			RST2	-	Is the output voltage of the DC-DC converter low?	AXY1135	If RST2 does not become high after the unit is turned on, a shutdown will be generated in several seconds.
				-	The 12 V power is not output.	POWER SUPPLY Unit	Check if V + 12 V is started.
Blue 4	High temperature of the panel		TMP_NG	TEMP1	Ambient temperature	-	If TEMP1 that is read by the module microcomputer is 75°C or higher, a shutdown will be generated.
				-	Abnormality in the panel temperature sensor	IC3851	Check the connection with the SENSOR Assy.

## 5.4 NON-FAILURE SYMPTOMS

### Information on symptoms that do not constitute failure

Symptom	Cause, item to check, information
<b>HDMI: Symptoms concerning the input format and settings</b>	
The picture color for an INPUT 3 or 4 signal is not correct.	The color setting for INPUT 3 or 4 is not compatible with that of the output equipment. Check whether the color setting is YPbPr or RGB.
The video signal to INPUT 3 or 4 is not displayed, and a message is displayed.	A unsupported video signal is input. Example: 1080p @ 60Hz
The audio signal input to the INPUT 3 or 4 pin jack is not output.	The audio setting for INPUT 3 or 4 is "AUTO," and a video signal is not input. If the audio setting is "AUTO," to output an analog audio signal, the DVI signal must be input via a DVI-HDMI conversion cable. When the DVI equipment is connected, the analog signals are selected with the setting "AUTO."
No sound of signals to INPUT 3 or 4 is output.	The setting on the side of the HDMI output equipment is wrong. Example: Dolby Digital
<b>MONITOR video output</b>	
The video output signal from the MONITOR connector is deteriorated. Or when the video output signal from the MONITOR connector is recorded, its playback picture is deteriorated.	The video signal output from the MONITOR connector is Macrovision protected.
The video signal is not output when the component signal is input to INPUT 2.	The video signal is not output from the MONITOR connector when the component signal is selected.
The video signal is not output when the video signal is input to INPUT 3 or 4.	The video signal is not output from the MONITOR connector when the HDMI signal is selected.
<b>MONITOR audio output</b>	
The image displayed on the PDP is not synchronized with the sound from the MONITOR audio output.	The audio signal from the MONITOR connector is synchronized with the video output signal from the MONITOR connector.
<b>DIGITAL audio output</b>	
Playback of the signal from the DIGITAL audio output connector is possible, but recording is not possible.	The video signal output from the DIGITAL connector is copy-protected.
The video output signal from the DIGITAL connector is not synchronized with that from the MONITOR video output.	The digital audio output signal from the DIGITAL connector is synchronized with the video signal that is currently displayed, and not with the MONITOR video output.
<b>Miscellaneous</b>	
The no-signal off function is not activated.	The no-signal off function is effective only while a video signal is being input.
The no-operation off function is not activated.	The no-operation off function is effective only while a video signal is being input.
Power management does not function.	Power management is effective only while a signal is being input from a PC.
The AUTO SETUP function is not activated.	The AUTO SETUP function is effective only while a signal is being input from a PC.
Control via the SR connector is not possible.	A failure in wrong connection of the cable to the SR audio connector is suspected.
The audio signal from the PC is not output.	A failure in wrong connection of the cable to the PC connector is suspected.
The picture-quality setting (AV Selection) is not stored.	The picture-quality setting is stored for each input. As the setting is changed when another input is selected, the user may have a false idea that the setting is not stored.
The picture size changes arbitrary.	The Auto Size setting is set to ON (default is OFF).
The display position of the screen slightly changes every time the unit is turned on.	The orbiter function for minimizing the effects of phosphor burn is activated. As ON/OFF of this function can only be changed on the Integrator menu, turning off of this function by a user is not possible.
The video signal to the S video connector is not displayed.	Although S video input is selected on the menu, the cable is connected via a component video input connector whose function type is the same as S video input.
The video signal to the composite video connector is not displayed.	Although the composite video input is selected on the menu, the cable is connected via a component video connector or S video connector whose function type is the same as the composite video input.

#### SUPPLEMENT: On the video setting for HDMI

There are three types of HDMI output formats: color difference 4:4:4, color difference 4:2:2, and RGB4:4:4.

(The proportions, such as 4:4:4 and 4:2:2, represent those of the amount of data for video signal components. For example, as for color difference 4:4:4, the proportion of the amount of data as for Y, Cb, and Cr is 4:4:4.)

It is required to make the settings of the PDP according to the settings of the output equipment. For usual operation, however, set them to AUTO. If the color is inappropriate, make the settings manually.

In the HDMI system, video signals are coded at 24 bits per pixel and transmitted as a series of 24-bit pixels. In a case of color difference 4:4:4, Y, Cb, and Cr use 8 bits each. In a case of color difference 4:2:2, Y, Cb, and Cr use 12 bits each, but Cb and Cr are transmitted at a half sampling rate of Y. This unit is capable of processing the upper 10 bits out of 12 bits of video data. Recent high-end DVD players, such as Pioneer DV-79AVi, are capable of outputting 10-bit color-difference signals. In general, it is said that picture quality for color difference 4:2:2 format is assumed to be higher, because human eyes are more sensitive to luminance than to colors. In the case of RGB4:4:4, R, G, and B use 8 bits each.

## 6. DISASSEMBLY

### 6.1 PCB LOCATION

## 4

A

## Disassembly

### 1 Rear Case (507)

#### ● Function button panel

- ① Remove the two screws.
- ② Remove the function button panel.

#### ● Side input cover

- ③ Remove the two screws.
- ④ Remove the side input cover.

#### ● Rear case (507)

- ① Remove the 17 screws. (AMZ30P060FTB)
- ② Remove the 12 screws. (TBZ40P080FTB)
- ③ Remove the two screws. (ABA1332)
- ④ Remove the one screw. (ABA1341)
- ⑤ Remove the rear case (507).

## 2 Access to PCB Assys

### ● SIDE Assy

- ① Remove the four screws.
- ② Remove the two screws.
- ③ Remove the three screws.
- ④ Remove the side input panel (E).

### ● 50 X MAIN DRIVE Assy

- ① Remove the two screws.
- ② Remove the side input shield with PCB.

### ● 50 Y MAIN DRIVE Assy

- ① Remove the two screws.
- ② Remove the function button shield with PCB.

### ● MAIN Assy

- ① Disconnect cables, connectors, as required.
- ② Remove the POD cover.
- ③ Remove the two screws.
- ④ Remove the two screws.
- ⑤ Remove the R07 DT Assy.

PDP-507XD  
only

### 3 Terminal Panel B (50E)

- ① Remove the 12 screws.
- ② Remove the 10 screws.
- ③ Remove the four screws.
- ④ Remove the terminal panel B (50E).

### 4 Front Case Assy (507PE)

- ① Remove the four rivets.
- ② Pull the lower part of the Front case Assy (507PE) toward you and out.
- ③ Remove the Front case Assy (507PE), by pulling it upward.

## 5 Exchange of SCAN IC

- ① Loosen the jumper wire.
- ② Remove the LED IR Assy by removing the one nylon rivet.
- ③ Remove the two screws.
- ④ Unhook the six hooks.
- ⑤ Remove the panel holders V1 (50) and V2 (50).

- ⑥ Remove the one screw.
- ⑦ Remove the three screws.
- ⑧ Remove the front chassis VL (50).

**Exchange**

## 7. ADJUSTMENT

### 7.1 PARTS CHANGE OF NOTES

1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
3. Use a stable AC power supply.

### 7.2 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

#### ■ When any of the following assemblies is replaced

POWER SUPPLY Unit	➡	Refer to "7.7 HOW TO CLEAR HISTORY DATA".
50 DIGITAL Assy	➡	Writing of backup data is required. Refer to the "7.4 BACKUP WHEN THE PANEL UNIT IS ADJUSTED. "
50X MAIN DRIVE Assy	➡	No adjustment required
50X SUB DRIVE Assy	➡	No adjustment required
50Y MAIN DRIVE Assy	➡	No adjustment required
50Y SUB DRIVE Assy	➡	No adjustment required
Service Panel Assy	➡	Refer to "7.5 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED" and "7.7 HOW TO CLEAR HISTORY DATA".
MAIN Assy	➡	Switching to SR+ from RS-232C
SENSOR Assy	➡	Writing of backup data is required. Refer to the "7.4 BACKUP WHEN THE PANEL UNIT IS ADJUSTED. "
TANSHI Assy	➡	No adjustment required
R07 DT Assy (PDP-507XD only)	➡	No adjustment required

## 7.3 ADJUSTMENT REQUIRED WHEN PART IS REPLACED

### Notes on replacing parts

For the parts described in the list below, replacement is required for the whole Assy, not only the defective part. If any part listed below is identified as defective and needs replacement, replace the whole Assy, and make necessary adjustments after replacement.

**Reason:** The whole Assy must be replaced, because adjustments and data rewriting for the Assy at the level of production line are required.

PCB Assy No.	Function Name	Parts that Require Whole-Assy Replacement		
		Ref No.	Function Name	Part No.
AWW1139	50 DIGITAL Assy	IC3151	Module microcomputer	AGC1011
		IC3401	Sequence IC	PEG239A
		IC3301	Flash memory	AGC1009
		IC3156	EEPROM	BR24L04FJ-W
AWW1140	SENSOR Assy	IC3652	EEPROM	BR24L02FJ-W
AWV2318	MAIN Assy	IC4603	Flash ROM	AGC1020
		IC4701	AV switch	R2S11002AFT
		IC4901	RGB switch	R2S11001FT
		IC5101	Main VDEC	UPD64015GM-UEU
		IC5103	Sub VDEC	TVP5150AM1PBS
		IC5301	A/D converter	AD9985KSTZ-110
		IC5403	EEPROM	BR24L02FJ-W
		IC5404	EEPROM	BR24L02FJ-W
		IC8202	Flash ROM	AGC1019
		IC8301	Flash UCOM	AGC1016
		IC8402	Flash ROM	AGC1018

POWER SUPPLY Unit

The assembly must be replaced as a unit, and no part replacement is allowed.

MAIN Assy

No adjustment is required after replacement of parts other than those mentioned above.

50 DIGITAL Assy

No adjustment is required after replacement of parts other than those mentioned above.

50X MAIN DRIVE Assy

No adjustment is required after replacement of parts other than those shown in "7.6 ADJUSTMENTS WHEN THE DRIVE ASSYS ARE REPLACED".

50X SUB DRIVE Assy

No adjustment required

50Y MAIN DRIVE Assy

No adjustment is required after replacement of parts other than those shown in "7.6 ADJUSTMENTS WHEN THE DRIVE ASSYS ARE REPLACED".

50Y SUB DRIVE Assy

No adjustment required

50 ADDRESS Assy

No adjustment required

SENSOR Assy

No adjustment is required after replacement of parts other than those mentioned above.

TANSHI Assy

No adjustment required

R07 DT Assy (PDP-507XD only)

This assembly must be replaced as a unit, and no part replacement is allowed.

### Outline

Adjustment data are stored in the EEPROM (IC3156/4K) on the DIGITAL Assy in the production process. Those adjustment data are also automatically stored in the EEPROM (for backup: IC3652) on the SENSOR Assy. If the DIGITAL Assy is replaced, those adjustment data for backup can be copied from the EEPROM on the SENSOR Assy to a new DIGITAL Assy.

### Backed up data

- Drive voltage adjustment value
- Hour-meter count
- Pulse-meter count
- Panel white balance adjustment value
- Serial No.
- Drive waveform adjustment value
- P-ON counter value
- PD/SD histories

### How to copy backup data

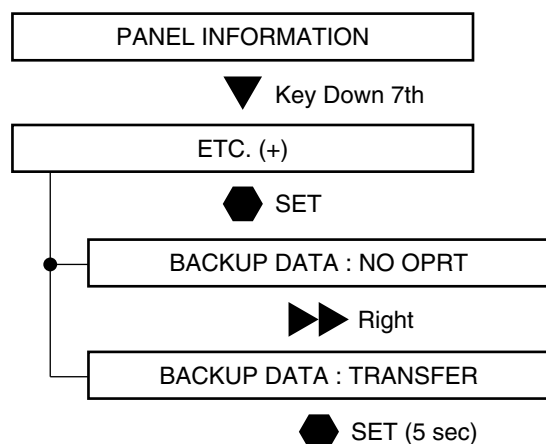

#### 1. When the DIGITAL Assy is replaced with one for service (usual service)

Adjustment data can be restored by copying the data backed up in the SENSOR Assy to the EEPROM on a new DIGITAL Assy.

The EEPROM on the new DIGITAL Assy has no adjustment data, and the EEPROM for backup in the SENSOR Assy has adjustment data. After replacing the DIGITAL Assy, enter PANEL FACT. mode, display the PANEL INFORMATION page, then check if "NO DATA!" is set for "DIG. EEP" and "ADJUSTED" is set for "BACKUP". Then, proceed in the following steps:

##### (1) Copying, using the Factory menu

- ① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- ② Turn on the power, using the remote control unit, then enter Panel Factory mode.  
Copy the backup data, as shown in the figure below.

- ③ Turn the power off.
- After the DIGITAL Assy is replaced with one for service, be sure to check if "NO DATA!" is set for "DIG. EEP" on the PANEL INFORMATION page of the PANEL FACT. mode.
- If copying of the backup data fails in the above procedure, the red LED lights, and the blue LED flashes, as a warning that no backup data were copied.
- If both the DIGITAL and SENSOR Assys are to be replaced, first replace the SENSOR Assy, turn the unit on and back off again, then replace the DIGITAL Assy.

##### (2) Copying, using the RS-232C commands

- ① Switch the RS-232C/SR+ setting to RS-232C so that RS-232C commands can be received.
- ② Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
- ③ Issue the BCP command to transfer the data stored in the EEPROM for backup.
- ④ Turn the power off.

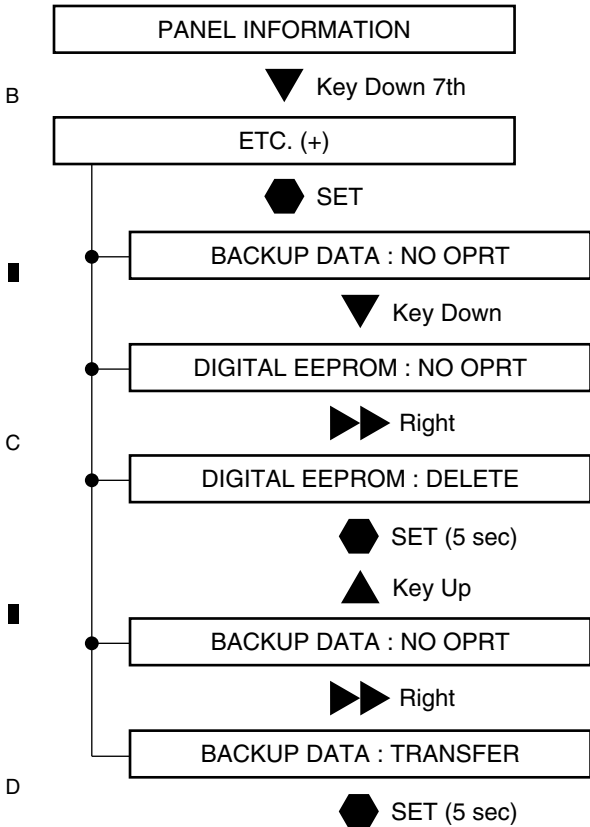

## 2. When a secondhand DIGITAL Assy that had been mounted in another product is to be reused

- A As adjustment data for another product are already stored in the secondhand DIGITAL Assy, first delete those data then copy the backup data stored in the EEPROM on the SENSOR Assy.

### (1) Copying, using the Factory menu

- ① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- ② Turn on the power, using the remote control unit, then enter Panel Factory mode.  
Copy the backup data, as shown in the figure below.

- ③ Turn the power off.

#### Note:

If the secondhand DIGITAL Assy is mounted in the product then the unit is turned on then back off again, the data in the EEPROM on the DIGITAL Assy are copied over the EEPROM in the SENSOR Assy. Thus the backup data can never be restored. During the first power-on after the DIGITAL Assy is replaced, be sure to enter Factory mode to copy the backup data. Or, before removing the secondhand DIGITAL Assy from the original product, delete the adjustment data on it, using the Factory mode (DIGITAL EEPROM: DELETE), mount it to the product to be repaired, then copy the data from the backup EEPROM.

### (2) Copying, using the RS-232C commands

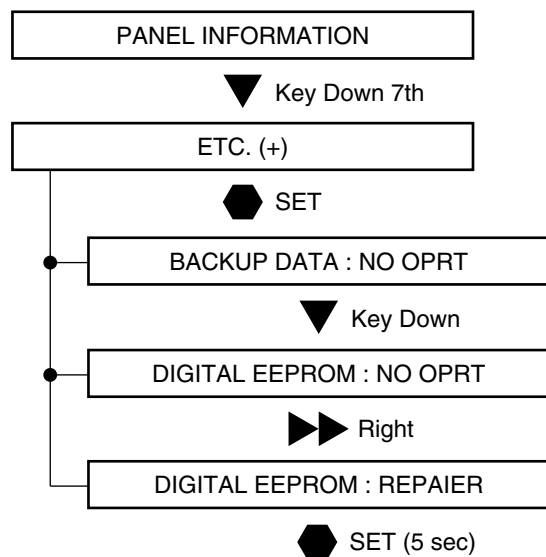

- ① Switch the RS-232C/SR+ setting to RS-232C so that RS-232C commands can be received.
- ② Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
- ③ Issue the UAJ command to delete data stored in the EEPROM on the DIGITAL Assy.
- ④ Issue the BCP command to transfer the data stored in the EEPROM for backup.
- ⑤ Turn the power off.

### 3. In a case where normal backup data are not stored in the backup EEPROM because the EEPROM on the DIGITAL Assy is defective, etc., and where manually adjusted values are to be applied to the product

**Note:** In this section, it is assumed that settings for various items have been completed, using Factory menu or RS-232C commands.

#### (1) Method using the Factory menu

- ① Set various setting/adjustment values.
- ② Proceed in the following steps.

- ③ Turn the power off.

#### **Note:**

When a DIGITAL Assy with an EEPROM in which adjustment data are stored is mounted, this step is not required after manual adjustment. ("DIGITAL EEPROM: REPAIR" is not indicated.)

#### (2) Method using the RS-232C commands

Issue the FAJ command.

1234

7.5 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED

A

Flowchart for panel replacement

After replacing the panel with one for service, readjustment of the Vofs voltage margin is required.

[Preparations]

- Basically, the Panel Factory menu is used for the voltage margin adjustment.
- The 60-Hz video sequence is used as the drive sequence.
- While adjusting the voltage margin using the Panel Factory menu, the current drive sequence is indicated on the screen, as shown below. Make sure that "60VS" is always indicated during adjustment.

[Supplement]

- When the raster mask for margin adjustment is displayed during Panel Factory mode, the Panel White Balance is set to default, and the Panel Gamma is set to Straight in the "PANEL-1 ADJ" layer. On the third line, the OSD reads "- - - /\*\*\*\*" (\*\*\*\* stands for the type of the drive sequence set).
- If you perform adjustment using RS-232C commands, use the commands shown below. These commands are different from those used during Factory Menu mode.

- PAV S00 : Used to set the Panel Drive mode to Factory.
- VFQ S03 : Used to set the Drive Sequence to Video 60 Hz.
- WBI S01 : Used to temporarily set the adjustment value of the Panel WB to default. (To return the value to its original value, use WBI S00.)
- PGM S00 : Used to set the gamma setting to Factory.

**Note:** If the power is shut off in the process of the adjustment procedures, send the above commands again.

## OUTLINE

### Mode switching

Switch modes to start the voltage adjustment, as follows:

Enter Factory mode.

Display RST MASK 01 (white).

FAY  
MKS S51

### Voltage setting

Set Vsus and Vyprst, and tentatively set Vofs:

VOL SUS : Set to 137 (205[V]).

VOL RST P : Set to the voltage indicated on the panel label.

VOL OFFSET : Tentatively set to the voltage indicated on the panel label.

VSU137  
VRP\*\*\*  
VOF\*\*\*

### Aging

Perform aging with the fully white screen for 30 minutes

To prevent an error caused by the temperature characteristics and to let the unit show its full properties after letting it sit, perform aging for 30 minutes to raise the panel temperature to a certain extent. This ensures the accuracy of inspection and adjustment.

### Actual Vofs adjustment (② to ④)

Measuring the upper limit of Vofs

Signals to be measured: red 760, red 1023+, green 1023, and blue 1023

Vofs setting

In a case where the upper limit of Vofs is less than 49:  
Vofs set voltage = Upper limit value of Vofs - 9 [V]

In a case where the upper limit of Vofs is 49 or more:  
Vofs set voltage = 40 [V]

### CA check with black

With the black mask displayed, check if there are stationary or horizontally moving lit cells.

### Confirmation of settings

Check that each voltage value is correctly set.

### Command transfer

After the voltage adjustment is finished, make the following settings:

Mask: OFF, Factory: OUT

### CA check

Check that the picture is properly displayed.

Use DVD, LD, and broadcast signals for checking.

### Ranges of the adjustable voltages

(Ranges of the adjustable voltage when the upper and lower limits of each voltage are to be checked in this flowchart)

Vsus = 205 [137] [V]

Vofs = 15 [005] to 60 [246] [V]

Vyprst = 250 [013] to 300 [128] [V]

Vxnrst = 180 [V]

Vh = 130 [V]

Vadr = 60 [V]

### Ranges of the voltage settings

(Ranges of voltage settings for this unit)

Vsus = 205 [137] [V]

Vofs = 28 [075] to 48 [182] [V]

Vyprst = 260 [036] to 300 [128] [V]

Vxnrst = 170 [V]

Vh = 130 [V]

Vadr = 60 [V]

When calculating the voltage, **round off the fractional part.**

(For circuit protection, it is desirable to set the voltage to a lower value.)

For margin measuring, be sure to read the value within the hysteresis (stricter value).

### The Definition of Abnormal Cells

Abnormal bright cells: Within five cells on screen.

(fewer than 2 cells within a radius of 1 cm)

Abnormal dark cells: Under fifteen cells on screen.

(fewer than 2 cells within a radius of 1 cm)

Count abnormal cells at a distance of 1 m from panel.

If abnormal cells won't occur longer than one second, do not count the abnormal cells.

Do not count still dark cells and bright cells.

### Standard settings of the unit at shipment:

Vsus setting = 205 [137] [V]

Vsus margin = 17 [V] or more

Vofs setting = 28 [075] to 48 [182] [V]

Vofs margin = 19 [V] or more

Vyprst setting = 260 [036] to 300 [128] [V]

**Note:** The voltages in the flowcharts are given in absolute values (without ±).

## ① Preparations

**Initial setting**

After turning the unit on, enter Factory mode.

FAY

with command  
PAV S00  
VFQ S03  
WBI S01  
PGM S00

Display RST MASK 01 (white).

MKS S51

**Voltage setting**Set VOL SUS to 137 ( $V_{sus} = 205 \text{ V}$ ).

VOL RST P: Set to the voltage indicated on the panel label.  
(See the conversion table for the electronic VR.)

VOL OFFSET: Tentatively set to the voltage indicated on the  
panel label. (See the conversion table for the electronic VR.)

**Aging**

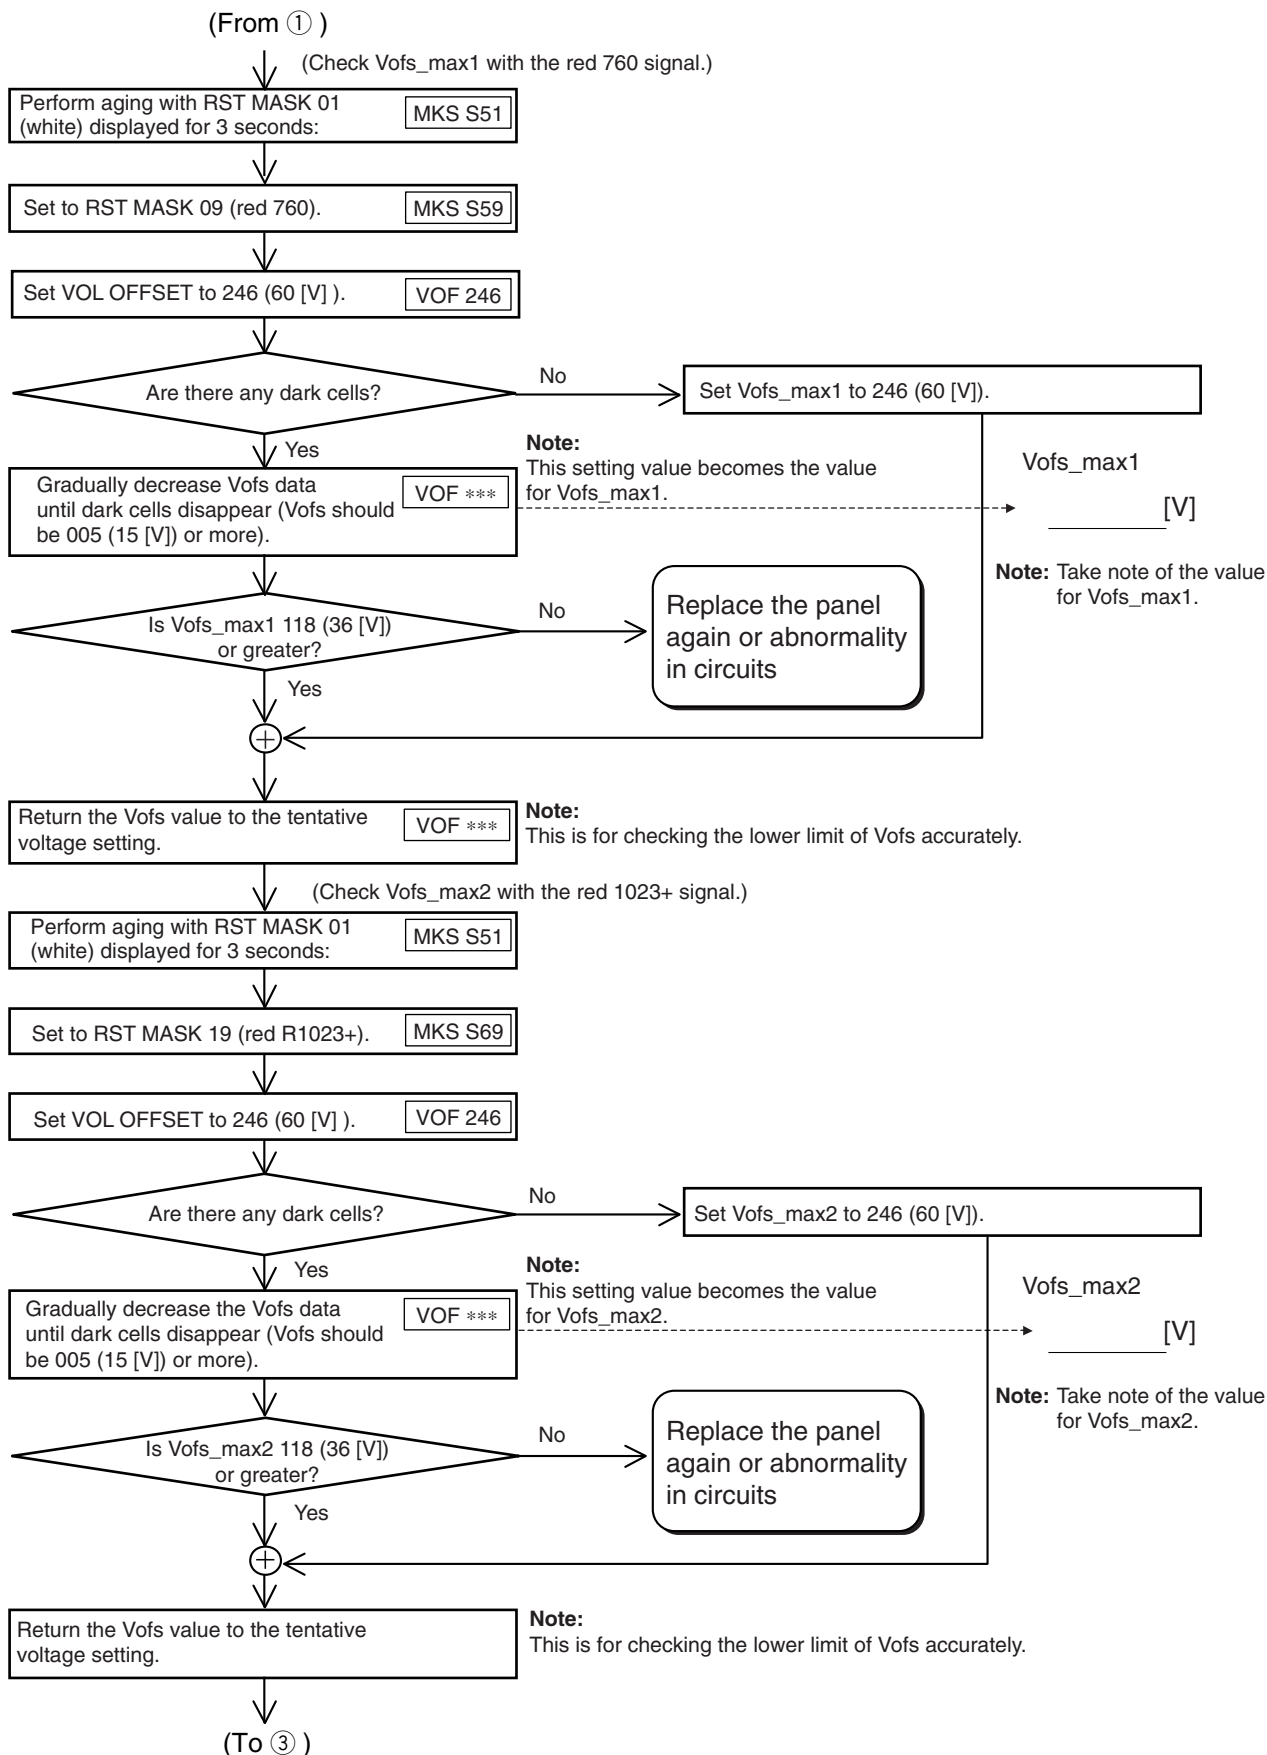

Perform aging with the fully white screen for 30 minutes

**Note:**

To prevent an error caused by the temperature characteristics and to let the unit show its full properties after letting it sit, perform aging for 30 minutes to raise the panel temperature to a certain extent. This ensures the accuracy of inspection and adjustment.

## 7.6 ADJUSTMENTS WHEN THE DRIVE ASSYS ARE REPLACED

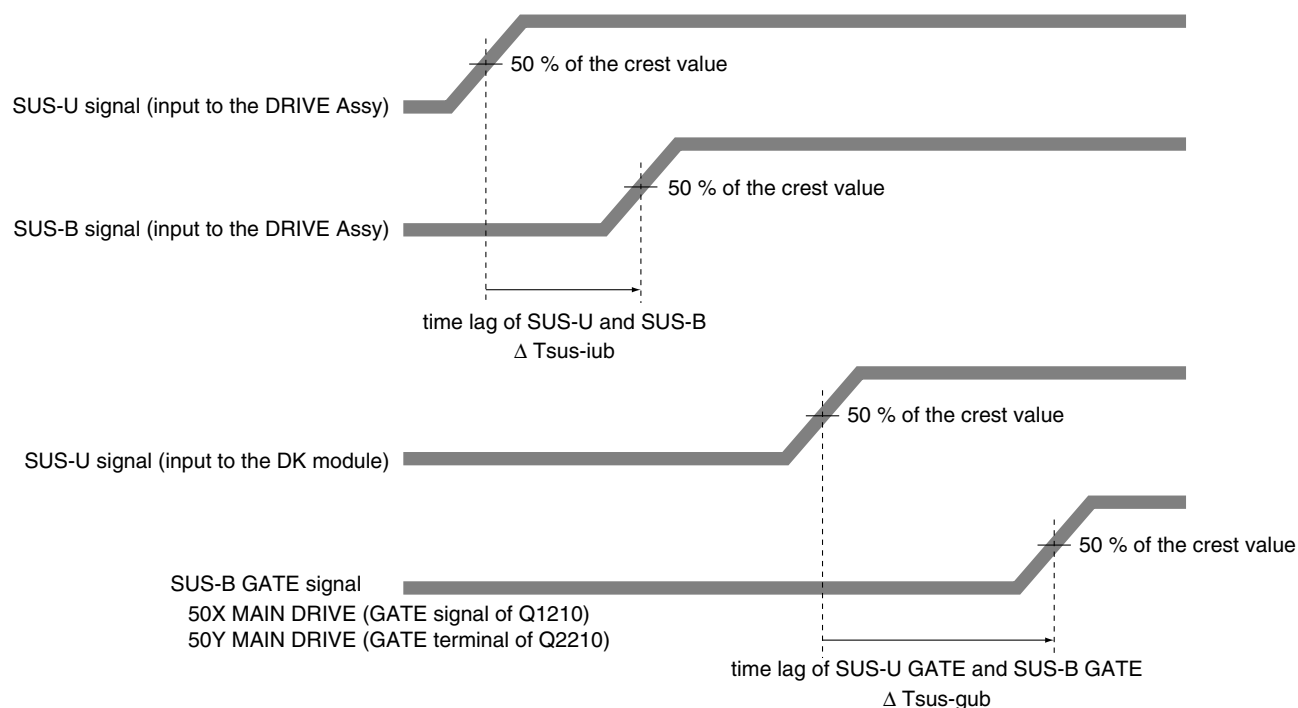

■ **Waveform adjustments required when replacing the following parts of the 50X MAIN DRIVE and 50Y MAIN DRIVE Assys.**

Assy Name	Ref No.	Part Name	Part Category	Remarks
50X MAIN DRIVE Assy	IC1205	PS9117P	Photo Coupler	
	IC1204	TND307TD	FET Driver	
50Y MAIN DRIVE Assy	IC2104	TND307TD	FET Driver	
	IC2209	PS9117P	Photo Coupler	
	IC2208	TND307TD	FET Driver	

### ■ TIME LAG ADJUSTMENT OF THE CONTROL SIGNAL (SUS-B)

- ① Measure the time lag for the SUS-U signal to the SUS-B signal.
- ② Check the time lag for the SUS-B GATE signal to the SUS-U GATE signal.  
Adjust the variable control so that the time lag of GATE becomes "time lag of input signal +  $\alpha \pm 5$  nsec."

**Note:** For details on measuring points of waveform, see the figure below.

#### time lag of SUS-U gate and SUS-B gate : $\Delta T_{sus-gub}$

Adjust so that " $\Delta T_{sus-gub} = \Delta T_{sus-iub} + \alpha \pm 5$  nsec," using the variable controls shown in the table below:

Assy	VR	Value of $\alpha$
50X MAIN DRIVE ASSY	VR1001	70 nsec
50Y MAIN DRIVE ASSY	VR2001	50 nsec

## ■ DELAY ADJUSTMENT OF THE CONTROL SIGNAL (SUS-D)

A

- ① Measure the pulse width of the SUS-D signal.
- ② Check the pulse width of the SUS-D input signal for the DK module.  
Adjust the variable control so that the pulse width of the SUS-D input signal for the DK module becomes the "pulse width of the SUS-D signal  $\pm 5$  nsec."

**Note:** For details on measuring points of waveform, see the figure below.

B

C

D

### SUS-D pulse width: Tsus-Dg

Adjust so that "Tsus-Dg = Tsus-D  $\pm 5$  nsec," using the variable control shown in the table below:

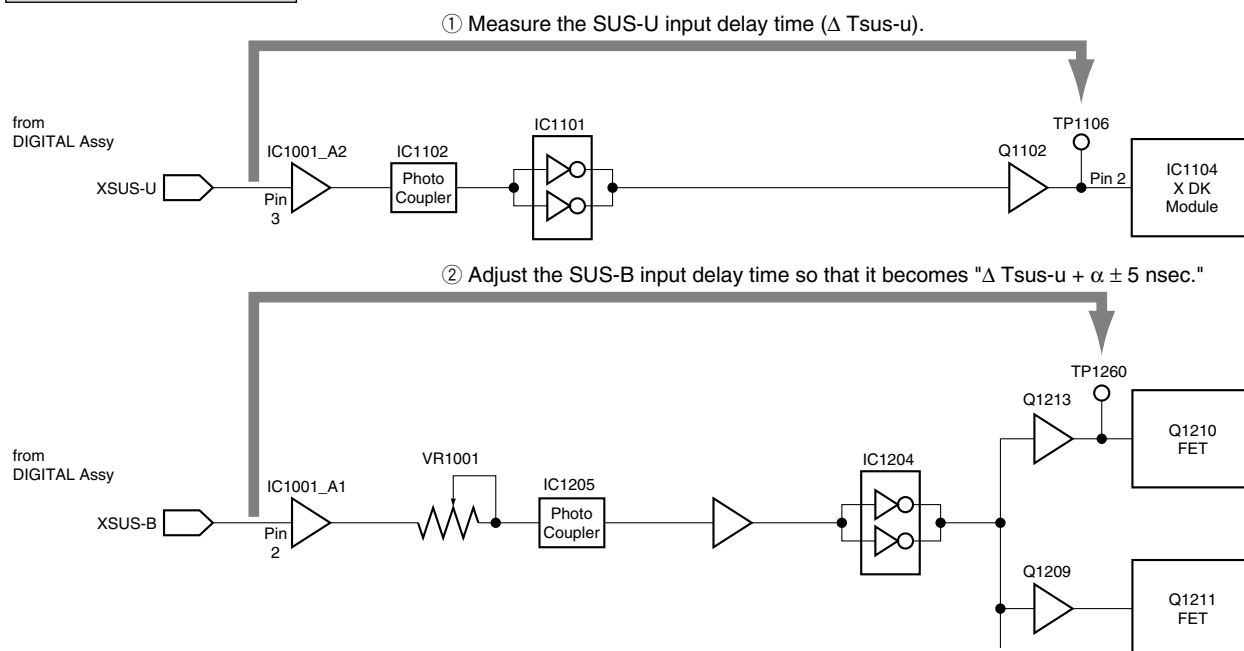

Assy	VR
Y MAIN DRIVE	VR2002

E

F

### 50X MAIN DRIVE Assy

### 50Y MAIN DRIVE Assy

## SUS-D ADJUSTMENT

### 50Y MAIN DRIVE Assy

## 7.7 HOW TO CLEAR HISTORY DATA

### ■ Clearance of various logs after the Assys are replaced

Besides adjustment data, data on accumulated power-on time and logs on defective parts of the product are backed up. Some of those data must be cleared after the Assys are replaced for service.

#### (1) Clearance of logs, using the RS-232C commands

Item	Content	When the Panel is replaced	When the POWER SUPPLY Unit is replaced	When the Other parts is replaced	RS-232C Commands
Hour-meter	Accumulated power-on time	Must be cleared	No need to be cleared	No need to be cleared	CHM
Pulse-meter	Accumulated number of pulses emitted	Must be cleared (mandatory)	No need to be cleared	No need to be cleared	CPM
Shutdown history	Cause of an SD and hour-meter count	Must be cleared	No need to be cleared	No need to be cleared	CSD
Power-down history	Cause of an PD and hour-meter count	Must be cleared	No need to be cleared	No need to be cleared	CPD
Power-on counter	Relay-on count	No need to be cleared	Must be cleared (mandatory)	No need to be cleared	CPC
MAX TEMP	Historical max. temperature	Must be cleared	Must be cleared	Must be cleared	CMT

**Notes:**

- As the pulse-meter count is used for each correction function, it must be cleared when an Assy relevant to correction functions is replaced.
- When clearing logs, using the RS-232C commands, first enter Factory mode (by issuing FAY or PFY), then issue the corresponding command.

#### (2) Clearance of logs, using the Factory menu

- Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- Turn on the power, using the remote control unit, then enter Panel Factory mode.  
Delete various logs, as shown in the figure below.

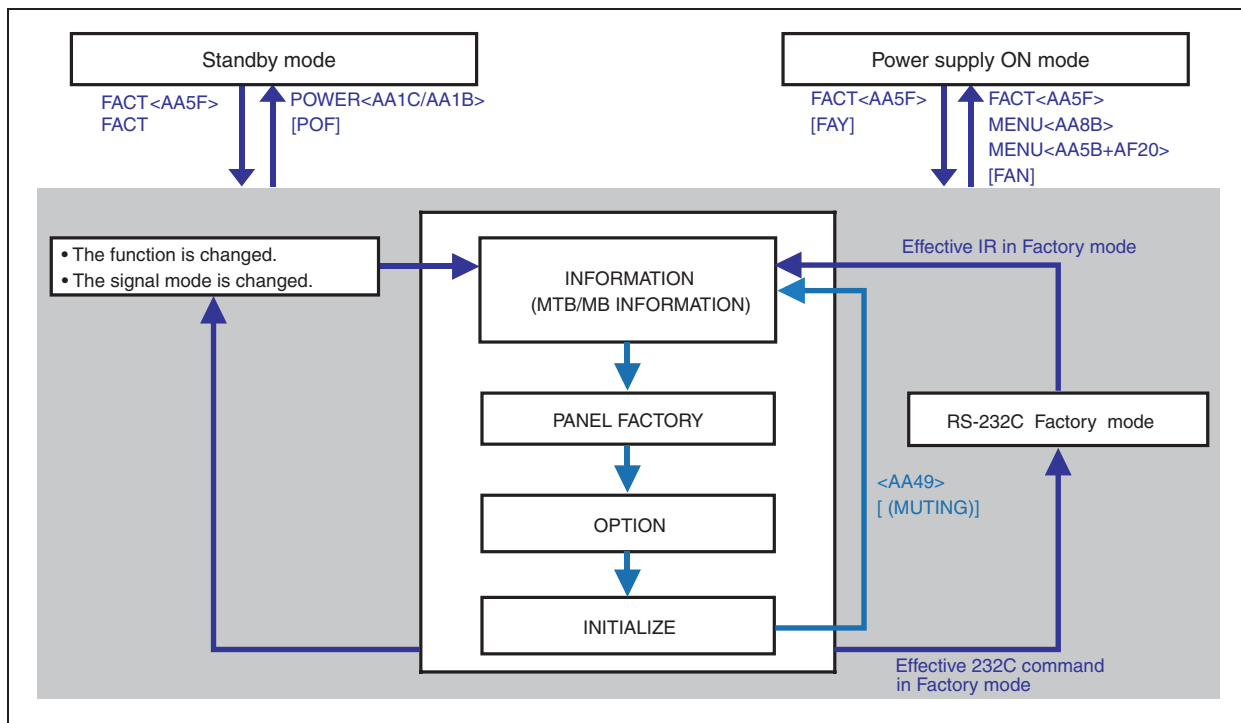

- Turn the power off.

## 8. SERVICE FACTORY MODE

### 8.1 OUTLINE OF THE SERVICE FACTORY

#### 8.1.1 SERVICE FACTORY MODE TRANSITION CHART

#### 8.1.2 HOW TO ENTER/EXIT SERVICE FACTORY MODE

##### ■ How to enter Service Factory Mode and do it go out.

###### ■ How to enter Service Factory Mode.

###### By using a control unit for servicing)

- Service remote control : press[FACTORY1]key.

###### By using RS-232C commands)

- Standby mode : Send [PON]+[FAY] .
- Power supply ON mode : Send[FAY] .

###### ■ How to come off Service Factory Mode.

###### By using a control unit for servicing)

- Service remote control : press [ FACTORY1 ] key.
- Remote control : press [ HOME MENU ] key.

###### By using RS-232C commands)

- Send [FAN] .

8.1.3 OPERATION OF SERVICE FACTORY MODE

■ Fuctions whose setting are set to OFF

A

No.	Function	Remarks
1	2-Screen Operation	Input function set on the main side is selected
2	FREEZE	
3	Mask Control	MTB/MB is none. It becomes processing on the PANEL side.
4	ORBITER	Central value operation

■ User data

User data will be treated as follows :

- User data on picture-quality and audio-quality adjustments are not reflected, and factory-preset data are output (user data will be retained in memory). When the unit enters Service Factory mode, the current audio-quality adjustment data will be still be retained in memory.
- As to data on various settings, user data will be applied to the items that are associated with signal format change (screenize switching, etc).
- Data on screen (i.e., screen position; meaning clock dividers, and not including data on screen size). Are reset to the default values (data stored in memory will be retained).  
Screen size will be retained.

B

C

D

E

F

## 8.1.4 REMOTE CONTROL CODE

SR/R Keys	Basic Functions	Remarks
MUTING	Switching the main items.	Shifting to the next main item (top).
↓ (DOWN) (Note1)	Switching the subtitled items.	Shifting downward to the next subtitled item.
↑ (UP) (Note1)	Switching the subtitled items.	Shifting upward to the next upper layer.
← (LEFT) (Note1)	Decreasing the adjustment value.	Decreasing the adjustment value.
→ (RIGHT) (Note1)	Increasing the adjustment value.	Increasing the adjustment value.
ENTER/SET (Note1)	Switching the layers.	Shifting downward or upward to the next lower or upper layer.
INPUT	Selecting INPUT.	Shifting the INPUT to the next function.
INPUTxx (Note1)	Selecting INPUT.	Switching the INPUT to xx. (xx=1 to 6 etc)
CH+/P+	Increasing the channel number.	Advancing
CH-/P-	Decreasing the channel number.	
Numeric Keys	Function: TV	Function: TV (previously selected channel number is selected)
POWER	Power OFF.	Turning the power off.
FACTORY	Factory OFF (Factory mode)	In Factory mode, turning Factory mode off.
	Factory ON (Non-Factory mode).	In Non-Factory mode, turn Factory mode on.
HOME MENU (Note1)	Menu ON.	In Factory mode, turn Factory mode off.
VOLUME+	Volume UP.	Increasing 10 the adjustment value. (PANEL FACTORY)
VOLUME-	Volume DOWN.	Decreasing 10 the adjustment value. (PANEL FACTORY)
DRIVE ON/OFF (Note2)	Drive Mode OFF.	Turning Drive mode off.
INTEGRATOR (Note1)	INTEGRATOR MENU ON.	Enter INTEGRATOR MODE.

(Note 1) A pertinent key that exists in the service remote control becomes effective only in the factory mode and the integrator mode. Please use the remote control of the attachment when you normally operate it in the mode (home menu operation etc.).

(Note 2) When ten seconds have passed since the [DRIVE ON/OFF] key was pressed at the standby, it becomes invalid. Please press [POWER] key from the [DRIVE ON/OFF] key pressing within ten seconds when you do power supply ON while driven OFF.

### Step-up A

Flash Device	Item Name	Display Example
TeleTEXT	TEXT	SUB V3.01
User Password	PASSWORD	1234

### 8.2.1.4 TEMPERATURE

A present temperature and the FAN rotation are displayed.  
If either [←] key or [→] key is pressed, the display data is refreshed.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

#### • Display/Meaning

TEMP1 : The temperature of the sensor on the panel side is displayed by the centigrade.

TEMP2 : The temperature conversion display is done with 10bit the A/D input value of Main uCON 76 pin (AN0). It is displayed by both the centigrade (C) and 8bit A/D value.  
(Remark:When temperature (C) of the sensor becomes more than a specified temperature, the shutdown start of processing.)

FAN : The value of the Fan rotating state is displayed.

STOP : stopped, LOW: slow speed, HIGH: high speed.

### 8.2.1.5 HOUR METER

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

#### • Display/Meaning

Meaning	Item Name	Display Example	Corresponding RS-232C Command
HOUR METER (PANEL)	PANEL	00151H 21M	QIP
POWER ON COUNTER	P-COUNT	00000095 TIMES	QIP
SYSTEM SERIAL	SERIAL		QIP

**Note 1:** The SYSTEM SERIAL displays only FHD. It corresponds by sticking the seal in G7 model.

**Note 2:** The PANEL-side's HOUR METER/P-COUNT acquires information from the PANEL-side.

### 8.2.1.7 HDMI SIGNAL INFO (2)

[illegible]

**Displays input signal status of MVDEC terminal**

Display Item	Meaning
H RES	Number of horizontal pixels (decimal)
V RES	Number of vertical lines (decimal)
H DE	Number of effectively horizontal pixels (decimal)
V DE	Number of effectively vertical lines (decimal)
INTRL	Intetlace (=INT) or progressive (=PRG)
V POL	VSYNC polarity
H POL	HSYNC polarity
AUDIO (first line)	Sampling frequency. (ex. DVD: 48kHz, CD: 44.1kHz) *1
AUDIO (second line)	PCM (PCM) or No PCM (=no PCM)
AUDIO (third line)	Quantization bit
COL SP	Color space (AVI Info) (422 or 444 or RGB) *2
COLMET	Colormetry (AVI Info) (SD: 601, HD:709) *2
ASPECT	Aspect (AVI Info)
ACTIVE	Video active format (AVI Info)
V FMT	Video identification code (AVI Info)
PIX RP	Pixel repeat value for 2880 dot
SOURCE (first line)	Vendor name of the emission device
SOURCE (second line)	Model name of the emission device

\*1: Please confirm whether to be displayed here when the sound is not emitted.

\*2: There is a possibility of not suitable for the state of the source equipment when the color is amusing.

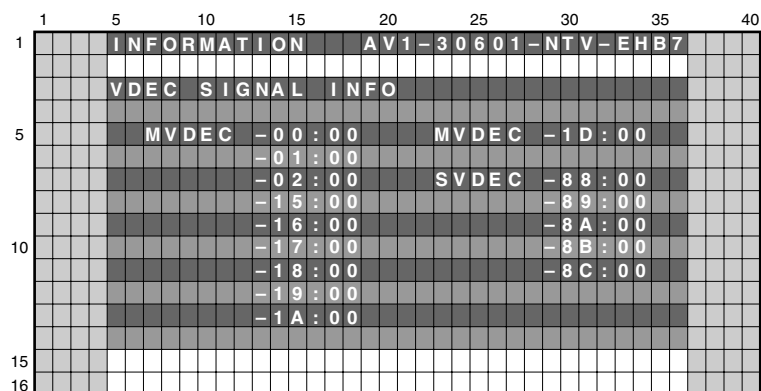

### Display of HDMI FACTORY and correspondence of resolution

Please confirm the following 5 items when the picture doesn't come out.

Input Signal	FACTORY Display				
	H RES	V RES	H DE	V DE	V FMT
480i (525i)	858	262 or 263	720	240	720x480i @ 60
480p (525p)	858	525	720	480	720x480p @ 60
1080i (1125i)	2200	562 or 563	1920	540	1920x1080i @ 60
720p (750p)	1650	750	1280	720	1280x720p @ 60

### 8.2.1.8 VDEC SIGNAL INFO

A

**B**

C

**Displays input signal status of VDEC terminal.**

Device	SA	Context
MVDEC	00h	Signal distinction result 1
	01h	Signal distinction result 2
	02h	Flag detection output
	15h	Noise level distinction 1
	16h	Noise level distinction 2
	17h	Non-standard signal detection
	18h	Subcarrier signal detection
	19h	ACC data output
	1Ah	ACC information output
SVDEC	1Dh	Input signal mode
	88h	Status register 1 (TV/VCR status)
	89h	Status register 2 (Macrovision detection, etc.)
	8Ah	Status register 3 (Front-end AGC gain value)
	8Bh	Status register 4 (Subcarrier to horizontal (SCH) phase)
	8Ch	Status register 5 (Signal distinction)

### ■ Operation Items

This is the menu screen for the adjustment of the panel. Data acquisition and value adjustment can be performed for the following items:

No.	Indication	Description of functions
8.2.2.1	PANEL INFORMATION	Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed.
8.2.2.2	PANEL WORKS	Operation data, such as accumulated pulse-meter count, accumulated hour-meter count, accumulated power-on count, and the temperature detected by the sensor, are displayed.
8.2.2.3	POWER DOWN	The power-down history is displayed, with the hour-meter values that indicate the hour values when power-downs occurred.
8.2.2.4	SHUT DOWN	The shutdown history is displayed, with the hour-meter values that indicate the hour values when shutdowns occurred.
8.2.2.5	PANEL-1 ADJ (+)	Settings of the driving pulse timing and driving voltage can be performed.
8.2.2.6	PANEL-2 ADJ (+)	White balance and ABL (power consumption) for the panel can be set.
8.2.2.7	PANEL REVISE (+)	The level for correction of panel degradation can be set.
8.2.2.8	ETC. (+)	Copying of backup data and clearance of various data can be performed.
8.2.2.9	RASTER MASK SETUP (+)	The mask indication (RASTER) can be set and indicated.
8.2.2.10	PATTEN MASK SETUP (+)	The mask indication (PATTERN) can be set and indicated.
8.2.2.11	COMBI MASK SETUP (+)	The mask indication (COMBI) can be set and indicated.

## ■ Details of indications in each layer

- In the following examples, GUI images for a 50-inch model are indicated. Although the display areas for the menu for 42-inch and 50-inch models are different, the items to be displayed are the same.

### 8.2.2.1 PANEL INFORMATION

- Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed. No other layers are nested below this layer, and there are no adjustment items.

#### ■ Key operation

- <DOWN> : Shifting to PANEL WORKS
- <UP> : Shifting to COMBI MASK SETUP (+)
- <L/R> : Updating displayed information

#### ■ Display items:

- MODULE : The version of data written in the Module microcomputer (IC3151) is indicated.
- SEQ-PRG : The version of data written in the Sequence Program Storage Memory (IC3301) is indicated.
- VD-SEQ : The Drive Sequence version for Video mode is indicated.
- PC-SEQ : The Drive Sequence version for PC mode is indicated.
- SERIAL : The serial number of the module is indicated.
- DIG.EEP : The adjusted status of the EEPROM that is mounted on the DIGITAL Assy is indicated.
- BACKUP : The adjusted status of the EEPROM for backup that is mounted on the SENSOR Assy is indicated.

### 8.2.2.2 PANEL WORKS

- Data on operations, such as the accumulated pulse-meter counts, hour-meter count, power-on count, and temperature detected by the sensor, are sent back. No other layers are nested below this layer, and there are no adjustment items.

#### ■ Key operation

- <DOWN> : Shifting to POWER DOWN
- <UP> : Shifting to PANEL INFORMATION
- <L/R> : Updating displayed information

Temperature unit is " °C (Centigrade) ".

#### ■ Contents of the Display item

- PM-B1 to B5: The accumulated pulse-meter counts for the 5 blocks on the screen are indicated. (the lowest-order digit represents millions of pulses.)
- HR-MTR: The hour-meter value (accumulated power-on hours) is indicated.
- P-COUNT: The accumulated power-on count is indicated.
- TEMP1: The current panel temperature and the historical maximum temperature recorded in memory are indicated. The range of temperature indication is from -50.0 to +99.9. (The temperature unit is " °C (Centigrade) ".)

### 8.2.2.3 POWER DOWN

- The power-down history is displayed. The last most 8 power-down histories are displayed with the hour-meter values that indicate the hours when power-downs occurred. No other layers are nested below this layer, and there are no adjustment items.

		1	5	10	15	20	25	30	32

9	RASTER2	Raster (75% Yellow)	19	10STEP4	10STEP (75% Red)
10	RASTER3	Raster (75% Cyanide)	20	10STEP5	10STEP (75% Blue)

#### Notes when using SG MODE/SG PATTERN

- During factory mode, choose the correct route when changing.
- Basically, during VDEC SG output, make sure to connect SG output's Y or G to the AVI input terminal of VDEC.
- During SG MODE, turn off the blanking 50IRE setup function.
- During VDEC SG output, set the YC separation setting to NTSC.
- It is possible to use ANALOG OUT MODE together during DIGITAL OUT MODE.  
The Main VDEC can output digital color difference, in which colors will appear.  
But the route to VDEC input cannot be analysed therefore care should be taken when using.  
Depending on the situation, please use the proper analog/digital output.
- The SG MODE outputs color difference and RGB only. Therefore, in the case of CVBS, only the Y input is used resulting in no color.  
This is not a damage result nor error.
- The SG MODE's ANA AD RGB (route to input 525i to AD by RGB) as a set's route, the setting does not exist. For this account the latter part from MVDEC does not have set values, resulting in having funny colors in colorbar, the brightness changes after switching, etc.  
This is not a damage result nor error.
- Depending on MVDEC's part version, ANA\_MVDEC\_YCBCR may not display colors.

#### 8.2.4.4 SIDE MASK LEVEL

To configure sidemask's R, G, B level (To adjust the values, input signal is required).

No.	Display	Content	RS-232C
1	R MASK LEVEL ⇄	Adjust Side Mask R (Adjustable range: 000 to 255)	RSL
2	G MASK LEVEL ⇄	Adjust Side Mask G (Adjustable range: 000 to 255)	GSL
3	B MASK LEVEL ⇄	Adjust Side Mask B (Adjustable range: 000 to 255)	BSL

#### 8.2.4.5 FINAL SETUP

- To reset each memory value st0 factory default values. Factory command is "FST".
- When the configuration is set to <NO> and the [SET] key is pressed, no action is taken and the menu returns to previous screen.
- When the configuration is set to <YES> and the [SET] key is pressed for 5 seconds, the reset action executes.

#### 8.2.4.6 CVT AUTO

Exclusively used for technical analysis (details omitted).

#### 8.2.4.7 HDMI INTR POSITION (+)

Exclusively used for technical analysis (details omitted).

## 9. LIST OF RS-232C COMMANDS

### 9.1 OUTLINE OF RS-232C COMMANDS

#### 9.1.1 PREPARED TOOLS

It is necessary to prepare the following one to use 232C command.

- PC
- Application for control
- 232C cable (straight)
- \* It is likely not to move correctly in Win 98 faction/Me and Win for foreign countries.
- \* The setting of the Com port cannot be communicated if it doesn't do correctly.  
(Please follow a set explanation of PC in the Com port)

#### 9.1.2 USING RS-232C COMMANDS

For the PDP-507XD and PDP-507XA series Plasma Displays, the circuitry is structured as shown in the diagram below to support the SR+ system. Controlling with either the SR+ system or RS-232C commands can be selected.

As the SR+ system is selected at shipment, to control with RS-232C commands in servicing it is necessary to switch the paths. After servicing, be sure to return the setting to the SR+ system.

#### ■ Rough diagram of switching between SR+ and RS-232C

#### ■ How to switch SR+/RS-232C ?

There are "How to switch SR+/RS-232C by remote control in the Standby Mode" and "How to switch SR+/RS-232C by remote control in the INTEGRATOR MENU" as a Method

##### ① To select SR+/RS-232C by remote control in Standby Mode.

- During Standby mode, hold the keys other than the [POWER] key on the remote control, the following operation is done within 10 seconds.

To select from SR+ to RS-232C/To select from RS-232C to SR+.

- During standby mode, hold the [VOLUME+ (or -)] key on the remote control unit pressed for 3 to 10 seconds.  
→Then within 3 seconds after the key is released, hold the [2-screen] key released, use the [SET (ENTER)] key on the remote control unit to set to RS-232C (the baud rate last selected is chosen) or the [HOME MENU] key to set to SR+.
- During IF Standby mode (once 10 seconds or more has passed after the LED goes dark during communication), the first keypress may not be accepted. In such a case, for a key operation, first press any key other than the [POWER] key and [CH] keys, then the desired key.
- At the switch SR+/RS-232C, the LED will be blinked on the fixed time.

##### ② To select SR+/RS-232C in the INTEGRATOR MENU.

- How to enter INTEGRATOR MENU.  
During standby mode, press the [Home Menu] key, and then press the [POWER] key within 3 seconds. During factory mode, hold the [INTEGRATOR] key.
- In INTEGRATOR MENU, there is a OSD where SR+ (or RS-232C) is turned on/off, and it switches on the screen.

### 9.1.3 COMMAND PROTOCOL

#### ■ Communication protocol : Asynchronous serial communication by RS-232C

Start bit length : 1 bit  
 Data width : 8 bit (ASCII codes/There is no distinction between the capital letter and the small letter)  
 Parity : None  
 Stop bit length : 1 bit  
 Baud rate : 9600 bps (Fixed)

#### ■ Regulating function

Direct numerical value effective: The adjustment value can be set directly by transmitting the figure to the mark of the command.

#### ■ Data format

The control signal format sent from the user side controller is as follows. When the transmission data is completed STX (02 (Hex)), the command of ETX (03 (Hex)) is arranged when beginning to communicate. And, ID, the command, and the parameter are arranged between those. Data is assumed to be ASCII form alphanumeric character. Neither the capital letter nor the small letter are distinguished.

• Only for the command

STX	ID	Command	ETX
0x02	**	□□□	0x03

• When you accompany setting/adjustment data

STX	ID	Command	Parameter	ETX
0x02	**	□□□	△△△	0x03

#### ■ Command processing

When the command is input, the command processing begins processing.  
 ID is assumed to be 2 asterisk "\*\*".

#### ■ Reception confirmation

The module microcomputer judges right or wrong for the command received from the main side.  
 If it is an effective command, processing is executed. And, the reply of the received command is done when entering the following state of the command standby after processing is completed.  
 The replying data replies data that deletes the ID code from the reception command by the capital letter.

• When you accompany setting/adjustment data

Send data to PC

STX	ID	Command	Parameter	ETX
0x02	**	□□□	△△△	0x03

Receive data

STX	Command	Parameter	ETX
0x02	□□□	△△△	0x03

• Only for the command

Send data to PC

STX	ID	Command	ETX
0x02	**	□□□	0x03

Receive data

STX	Command	ETX
0x02	□□□	0x03

In this case, "ERR" replies if it is a command of the uncorrespondence.

The command replies "XXX" when processing on status cannot be executed even if it is effective.

• For an Invalid command

Send data to PDP system

STX	ID	Command	ETX
0x02	**	□□□	0x03

Receive data

STX	Command	ETX
0x02	ERR	0x03

• For the command that cannot be executed on status

Send data to PDP system

STX	ID	Command	ETX
0x02	**	□□□	0x03

Receive data

STX	Command	ETX
0x02	XXX	0x03

#### ■ Processing in the case of an error

When the communication error occurs from STX between ETX, the processing of a pertinent command is discontinued, and the reception buffer is cleared. When STX is received, the command reception processing keeps storing the transmitted character string in the register.

And, the character string placed by the ETX reception between STX-ETX is interpreted as a command.

## 9.1.4 DEFINITION OF COMMAND

### Single functional command

The command to which operation is concluded only by command. The command parts are 3 characters.

### Adjustment command and adjustment value

- The command to which value of parameter is changed attended with adjustment value.  
The command parts are 3 characters.
- The adjustment value is the numeric character data of the decimal number 3 characters.  
It is made the range of 000-999. The range that can be adjusted is different according to the function to adjust (It is noted that then, it is not uniformly to 999).

- \* When the received command exceeds the range where the adjustment value can be adjusted, "XXX" is transmitted.
- \* When the same adjustment value is continuously transmitted two times or more, "XXX" doesn't reply, though it is an invalid command. It's overwritten, and ACK that deletes ID replies.

### Set command and Set value

- The command to which set value of parameter is changed attended with set value.  
The command parts are 3 characters.
- Set values are three characters. The first character is fixed to "S".  
2 remainder characters are assumed to be assumption S00-S99 as the decimal number.

- \* When the received command doesn't exist as a set value, "XXX" is transmitted.
- \* When the same set value is continuously transmitted two times or more, "XXX" doesn't reply, though it is an invalid command. It's overwritten, and ACK that deletes ID replies.

### State acquisition command

- The command that reports on state of operation and set value, etc. to system side.
- The content that corresponds by the kind of the command is read from the memory, when the command is received from the system side and it replies.
- The command parts are three characters. The first character is fixed to "Q". It sets since the second character according to the content of information.
- The reply data is transmitted adding various data that converts the received command and ASCII code and the checksum of the data. Because the content of the reply changes according to the kind of the "QUEST command", the data length follows an individual, individual specification.

### ■ Adjustment assistance command

The Adjustment Assistance Command is combined and used with the Adjustment Command.

- The Adjustment Command + Adjustment Assistance Command ⇒ It addition/subtracts it from a present adjustment value.

**Note:** When the received command exceeds the range of the adjustment value, it changes to MAX/MIN.

- The adjustment command immediately before is made efficacy when only the adjustment command (addition/subtraction command) is received alone after the adjustment command receptions completed, and it makes it to the value addition/subtracted from a present adjustment value. However, it applies to the command when other commands are received.

- Kind of Adjustment Assistance Command (addition/subtraction command)

UP1 to UP9, UP0, UPF: 1 to 10 is added to a setting value.

UPF: It makes it to the maximum value ("VOL" command).

DW1 to DW9, DW0, DWF: 1 to 10 is subtracted a setting value.

DWF: It makes it to the minimum value ("VOL" command).

FWD: One Preset CH is previously advanced ("CHN" command).

REV: One Preset CH is returned in the front ("CHN" Command).

Send data to PDP system

STX	ID	Command	Subcommand	ETX
0x02	**	VOL	UP1	0x03

Receive data

STX	Command	Subcommand	ETX
0x02	VOL	UP1	0x03

## 9.2 LIST OF RS-232C COMMANDS

RS-232C commands can be used in Service Factory mode. Before using RS-232C commands, it is necessary to change the factory presetting.

See "9.1 OUTLINE OF RS-232C COMMANDS".

[Note ; If you want to see version information (ex. QS1, QS6, Factory, Menu), Please see 10 seconds after starting.]

### RS-232C command list

Command Name		Function	Active U-com		Last Memory	Effective only in Factory mode	Remarks
			MDU	MTB			
A							
ABL	***	Adjusting the upper limit of the power	●		Mod	●

9.3 OUTLINE OF COMMANDS

9.3.1 QS1

A Model information and version information are returned.

Command Format	Effective Operation Modes	Function	Remarks
[QS1]	Every Time	Output of status	Return data: 105 Byte

B

C

D

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS1 (Fixed)
1	Display information 1 (Resolution/inch size)	1 byte	F
2	Display information 2 (Panel Generation)	1 byte	7: G7
3	Display information 3 (Destination)	1 byte	A: USA
4	Display information 4 (System Type)	1 byte	*
5	Display information 5 (Panel Product Form)	1 byte	B
6	MDUcom-Boot	3 byte	01A
7	MDUcom-Prg	8 byte	
8	Seq Prs-Boot	3 byte	01A
9	Seq Prs-Prg	8 byte	
10	SQ-VIDEO	4 byte	
11	SQ-PC	4 byte	
12	Panel Type	1 byte	P/F
13	Reserved (*)	7 byte	*****
14	, (comma)	1 byte	
15	MTB information 1 (Generation)	1 byte	7: G7
16	MTB information 2 (Regional model)	1 byte	A: USA
17	MTB information 3 (Grade)	1 byte	H: Elite
18	MTB information 4 (System Type)	1 byte	B
19	Common version for IF microcomputer	4 byte	
20	Common version for Main microcomputer	8 byte	
21	Boot version of Main microcomputer	4 byte	
22	Common version for Multi-processor	8 byte	
23	Boot version of Multi-processor	4 byte	
24	Reserved (*)	24 byte	
25	Check Sum	2 byte	FF

1: Resolution/Inch size	
3	1024*768/42
4	1024*768/43
5	1280*768/50
6	1365*768/50
7	1365*768/60
F	1920*1080/50

2: Panel Generation	
6	G6
7	G7
8	G8
9	G9
0	G10

3: Destination	
*	Commonness
A	US (Reserved)
E	EU (Reserved)
J	Japan (Reserved)

4: System Type	
*	Commonness
Z	Evaluation

5: Panel Product Form	
S	System model
B	All-in-one design TV
M	Monitor
D	Standard module
E	Simple module

E

12: Panel Type	
P	The past
F	High-effective

15: MTB/MB Generation	
6	G6
7	G7
8	G8
9	G9
0	G10

16: Regional Model	
J	JP
A	US
E	EU
G	GE
C	CH
U	AU

17: MTB/MB Grade	
H	Elite/DXA/Step-upD
T	Step-upA/XG/TXC/Regular (US)
B	Not used (For Future)
S	RegularD
R	RegularA

18: MTB/MB Product Form	
S	System model
B	One body model (SX)
M	Monitor (FHD)

19 to 23: MTB/MB-side's information	
IF uCON	Common version of IF microcomputer
Main uCON	Common version of Main microcomputer
Main uCON-Boot	Boot version of Main microcomputer
Multi-prs	Common version of Multi-processor program
Multi Prs-Boot	Boot version of Multi-processor program

F

## 9.3.2 QS2

The command QS2 is for acquiring data on the panel's operational information.

Command Format	Effective Operation Modes	Function	Remarks
[QS2]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+23(DATA)+2(CS)= 28 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS2
1	Notification of mode shifting to STB	1 byte	1
2	Flag for adjustment of the main unit	1 byte	0
3	Flag for adjustment-data backup	1 byte	0
4	"1st PD" data	1 byte	0
5	"2nd PD" data	1 byte	0
6	Still picture detection	1 byte	0
7	Reserved	2 byte	**
8	Temperature data (TEMP 1)	3 byte	128 (*1)
9	SD main data	1 byte	0
10	SD sub data	1 byte	0
11	Operation status induced by SD	1 byte	0
12	Data from the hour meter	8 byte	00000259 (*2)
13	MASK indication	1 byte	0
CS		2 byte	4A

**Note :** (\*1) The unit scale is centigrade. The data is A/D value from the thermal sensor.

(\*2) "00000259" of "Data from the hour meter" means 2 hours 59 minutes.

1: Notification of mode shifting to Standby	
0	Entering Standby mode failed
1	Entering Standby mode succeeded

2: Adjustment of the main unit	
0	Adjustment completed
1	Adjustment not completed

3: Adjustment-data backup	
0	With backup data
1	No data (default)

4, 5: PD data	
0	No PD data
1	Not used
2	POWER
3	SCAN
4	SCN-5V
5	Y-DRV
6	Y-DCDC
7	Y-SUS
8	ADRS
9	X-DRV
A	X-DCDC
B	X-SUS
C	Not used
D	Not used
E	Not used
F	UNKNOWN

6: Still picture detection	
0	Normal screen
1	Still picture

9: SD main data	
0	No SD
1	SQ-IC
2	MDU-IIC
3	RST2
4	TEMP

10-1: SD-Sub (SQ-IC)	
0	No SD-Sub data
1	Communication error
2	Drive stop
3	BUSY
6	Version mismatching

10-2: SD-Sub (IIC)	
0	No SD-Sub data
1	EEPROM
2	BACKUP
3	DAC

10-3: SD-Sub (TEMP)	
0	No SD-Sub data
1	TEMP1
2	Reserved

11: Operation status induced by SD	
0	Normal
1	Relay-off completed
2	During warning indication

13: MASK indication	
0	MASK-OFF
1	MASK-ON

### 9.3.3 QIP

The command QIP is for acquiring data on operational information of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QIP]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+58(DATA)+2(CS)= 63 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QIP
1	SERIAL	15 byte	-----
2	HOUR METER	8 byte	00000000
3	TOTAL HOUR METER	8 byte	00000000
4	PON COUNTER	8 byte	00000000
5	TEMP1 acquisition (Temperature value)	5 byte	+23.5 (*1)
6	TEMP0 acquisition (Temperature value)	5 byte	+28.7 (*1)
7	MAX-TEMP1 acquisition (Temperature value)	5 byte	+78.3 (*1)
8	Reserved	4 byte	****
CS		2 byte	94

Note  
(\*1) : Centigrade scale

### 9.3.4 QAJ

The command QAJ is for acquiring the panel's factory-preset data.

Command Format	Effective Operation Modes	Function	Remarks
[QAJ]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+41(DATA)+2(CS)= 46 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QAJ
1	V-SUS adjustment value	3 byte	128
2	V-OFT adjustment value	3 byte	128
3	V-RST-P adjustment value	3 byte	128
4	Reserved	3 byte	***
5	XSB adjustment value	3 byte	128
6	YSB adjustment value	3 byte	128
7	YTG adjustment value	3 byte	128
8	YTW adjustment value	3 byte	128
9	RSW adjustment value	3 byte	128
10	YTB adjustment value	3 byte	128
11	RYW adjustment value	3 byte	128
12	R-REVICE setting value	1 byte	0
13	G-REVICE setting value	1 byte	0
14	B-REVICE setting value	1 byte	0
CS		2 byte	B7

• For each REVISE setting value, the level set for RRL, RGL, or RBL is transmitted as one character.

### 9.3.5 QPW

The command QPW is for acquiring the factory-preset data about the video of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPW]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+35(DATA)+2(CS)= 40 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPW
1	Drive sequence	3 byte	60V
2	Standard/nonstandard	1 byte	S
3	Type of ABL/WB tables	2 byte	T2
4	ABL adjustment value	3 byte	128
5	R-HIGH adjustment value	3 byte	256
6	G-HIGH adjustment value	3 byte	256
7	B-HIGH adjustment value	3 byte	256
8	R-LOW adjustment value	3 byte	512
9	G-LOW adjustment value	3 byte	512
10	B-LOW adjustment value	3 byte	512
11	Gamma setting	1 byte	A
12	Streaking correction	1 byte	1
13	Peripheral luminance correction	1 byte	0
14	Reserved	1 byte	*
15	WB interlocked with APL	1 byte	0
16	Transition of protective operations	1 byte	0
17	Reserved	2 byte	**
CS		2 byte	37

1: Drive sequence	
48V	Video 48 Hz
50V	Video 50 Hz
60V	Video 60 Hz
72V	Video 72 Hz
75V	Video 75 Hz
60P	PC 60 Hz
70P	PC 70 Hz

2: Standard/ nonstandard	
S	Standard
N	Nonstandard

3: Type of ABL/WB tables	
Tn	n: 1 to 4

11: Gamma setting	
n	0 to F

12, 15: Setting for Items 12 and 15	
0	OFF
1	ON

13: Peripheral luminance correction	
0	OFF
2	ON (interlocked with APL)

16: Transition of brightness by protective operations	
0	Upper limit state for brightness
1	Brightness being reduced
2	Lower limit state for brightness
3	Brightness being increased

### 9.3.6 QPM

The command QPM is for acquiring the accumulated number of pulses of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPM]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+40(DATA)+2(CS)= 45 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPM
1	Pulse meter B 1	8 byte	00000000
2	Pulse meter B 2	8 byte	00000000
3	Pulse meter B 3	8 byte	00000000
4	Pulse meter B 4	8 byte	00000000
5	Pulse meter B 5	8 byte	00000000
CS		2 byte	E7

## 9.3.7 QPD

The command QPD is for acquiring data from the 8 latest power-down (PD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QPD]	All operations	To acquire data on the power-down logs	Return data: 3 (ECO)+80(DATA)+2(CS)= 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPD
1	Latest "1st PD" data	1 byte	A
2	Latest "2nd PD" data	1 byte	2
3	Data from the hour meter for the latest PD	8 byte	00010020
4	Second latest "1st PD" data	1 byte	E
5	Second latest "2nd PD" data	1 byte	9
6	Data from the hour meter for the second latest PD	8 byte	00008523
7	Third latest "1st PD" data	1 byte	4
8	Third latest "2nd PD" data	1 byte	3
9	Data from the hour meter for the third latest PD	8 byte	00004335
10	Fourth latest "1st PD" data	1 byte	2
11	Fourth latest "2nd PD" data	1 byte	0
12	Data from the hour meter for the fourth latest PD	8 byte	00000945
13	Fifth latest "1st PD" data	1 byte	4
14	Fifth latest "2nd PD" data	1 byte	0
15	Data from the hour meter for the fifth latest PD	8 byte	00000715
16	Sixth latest "1st PD" data	1 byte	A
17	Sixth latest "2nd PD" data	1 byte	2
18	Data from the hour meter for the sixth latest PD	8 byte	00000552
19	Seventh latest "1st PD" data	1 byte	A
20	Seventh latest "2nd PD" data	1 byte	0
21	Data from the hour meter for the seventh latest PD	8 byte	00000213
22	Eighth latest "1st PD" data	1 byte	D
23	Eighth latest "2nd PD" data	1 byte	0
24	Data from the hour meter for the eighth latest PD	8 byte	000001A7
CS		2 byte	27

1, 2, 4, 5: PD data	
0	No PD
1	Not used
2	P-POWER
3	SCAN
4	SCN-5V
5	Y-DRIVE
6	Y-DCDC
7	Y-SUS
8	Address
9	X-DRIVE
A	X-DCDC
B	X-SUS
C	Not used
D	Not used
E	Not used
F	UNKNOWN

### 9.3.8 QSD

The command QSD is for acquiring the data from the 8 latest shutdown (SD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QSD]	All operations	To acquire data on the shutdown logs	Return data: 3 (ECO)+80(DATA)+2(CS)= 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QSD
1	Latest SD data	1 byte	1
2	Latest SD subcategory data	1 byte	0
3	Data from the hour meter for the latest SD	8 byte	00752013
4	Second latest SD data	1 byte	5
5	Second latest SD subcategory data	1 byte	0
6	Data from the hour meter for the second latest SD	8 byte	00495204
7	Third latest SD data	1 byte	2
8	Third latest SD subcategory data	1 byte	3
9	Data from the hour meter for the third latest SD	8 byte	00100355
10	Fourth latest SD data	1 byte	2
11	Fourth latest SD subcategory data	1 byte	5
12	Data from the hour meter for the fourth latest SD	8 byte	00075620
13	Fifth latest SD data	1 byte	1
14	Fifth latest SD subcategory data	1 byte	0
15	Data from the hour meter for the fifth latest SD	8 byte	00000852
16	Sixth latest SD data	1 byte	2
17	Sixth latest SD subcategory data	1 byte	5
18	Data from the hour meter for the sixth latest SD	8 byte	000000451
19	Seventh latest SD data	1 byte	0
20	Seventh latest SD subcategory data	1 byte	0
21	Data from the hour meter for the seventh latest SD	8 byte	00000000
22	Eighth latest SD data	1 byte	0
23	Eighth latest SD subcategory data	1 byte	0
24	Data from the hour meter for the eighth latest SD	8 byte	00000000
CS		2 Byte	7D

● SD data	
0	No SD
1	SQ-IC
2	MDU-IIC
3	RST2
4	TEMP

● SD subcategory (SQ-IC)	
0	No SD-Sub data
1	Communication error
2	Drive stop
3	BUSY
6	Version mismatching

● SD subcategory (MDU-IIC)	
0	No SD-Sub data
1	EEPROM
2	BACKUP
3	DAC

● SD subcategory (TEMP)	
0	No SD-Sub data
1	TEMP1
2	Reserved

### 9.3.9 QS6

Induce it peculiar, individual information is acquired.

A

Command Format	Effective Operation Modes	Function	Remarks
[QS6]	Every time	Output of status	

Order	Part	Data Arrangement	Data Length	Remarks
00	—	Received Command name	3 byte	QS6
01		DTB version	4 byte	
02		Reserved	8 byte	
03		TELE-TEXT version	60 byte	
04		USER PASSWORD	4 byte	
05	—	Check Sum	2 byte	

B

### 9.3.10 QMT

Temperature information (TEMP2) / FAN rotation state information on the MTB side is returned.

C

Command Format	Effective Operation Modes	Function	Remarks
[QMT]	Every time	Output of status	MTB-side's temperature/FAN rotating status

Order	Part	Data Arrangement	Data Length	Remarks
0	—	Received Command name	3 byte	QMT
01	MTB	MTB-side Temperature (TEMP2)	3 byte	
02		MTB-side FAN rotating speed	1 byte	0: STOP 1: LOW, 5: HIGH, 3: MIDDLE (FHD only)

D

E

F

## 9.3.11 QNG

MTB/MB side's shutdown information is acquired.

Command Format	Effective Operation Modes	Function	Remarks
[QNG]	Every time	Output of status	

Order	Part	Data Arrangement	Data Length	Remarks
00	—	Received Command name	3 byte	QNG
01	MTB	1st latest NG No.	1 byte	
02		Subcategory No. for the 1st latest NG.	1 byte	
03		MTB hour meter for the 1st latest NG.	7 byte	
04		Temperature for the 1st latest NG.	3 byte	
05		2nd latest NG No.	1 byte	
06		Subcategory No. for the 2nd latest NG.	1 byte	
07		MTB hour meter for the 2nd latest NG.	7 byte	
08		Temperature for the 2nd latest NG.	3 byte	
09		3rd latest NG No.	1 byte	
10		Subcategory No. for the 3rd latest NG.	1 byte	
11		MTB hour meter for the 3rd latest NG.	7 byte	
12		Temperature for the 3rd latest NG.	3 byte	
:		:	:	
29		8th latest NG No.	1 byte	
30		Subcategory No. for the 8th latest NG.	1 byte	
31		MTB hour meter for the 8th latest NG.	7 byte	
32		Temperature for the 8th latest NG.	3 byte	
33	—	Check Sum	2 byte	

### < SD Information No. >

Value	Shutdown Factor	Remarks (Operation)
0	Normal	
1	Failure of communication to Module microcomputer	MODULE (immediately Shutdown)
2	3-wire serial communication of Main microcomputer	Go to No. 1 Subcategory Information
3	IIC communication failure of Main microcomputer and Unknown error	Go to No. 2 Subcategory Information
4	Communication failure of Main microcomputer	MAIN (immediately Power Supply OFF)
5	FAN stopped	FAN (immediately Power Supply OFF)
6	Abnormally high temperature at MTB	TEMP2 (After 30 seconds warning, turn the power supply off)
7	Failure of Digital Tuner	Go to No. 3 Subcategory Information
8	Failure of Power Supply	Go to No. 4 Subcategory Information
B	Speaker short-circuit	

### < No. 1 Subcategory Information on "Failure in 3-wire serial communication of Main microcomputer" >

Value	Shutdown Factor	Remarks (Operation)
0	Non subcategory	
1	IF microcomputer communication failure	IF (immediately Power Supply OFF)
2	MANTA communication failure (MULTI)	MULTI1 (immediately Power Supply OFF)
4	MANTA communication	I/P
5	MANTA communication	D-SEL

## &lt; No. 2 Subcategory Information on "Failure in IIC communication of Main microcomputer" &gt;

Value	Shutdown Factor	Remarks (Operation)
0	Non subcategory	
1	Analog tuner1 (Front end 1)	FE1 (immediately Power Supply OFF)
3	MPX	MPX (After 3 times reset action, turn Power Supply off (except for us))
4	AV switch	AV-SW (immediately Power Supply OFF)
5	RGB switch	RGB-SW (immediately Power Supply OFF)
8	Main VDEC	M-VDEC (immediately Power Supply OFF)
9	Sub VDEC	S-VDEC (immediately Power Supply OFF)
A	AD/PLL	ADC (immediately Power Supply OFF)
B	HDMI	HDMI (immediately Power Supply OFF)
E	M2 communication	TX-COM (After 3 times reset action, turn Power Supply off)
F	M2 busy	TX-BSY (After 3 times reset action, turn Power Supply off)
G	64k EEPROM	MA-EEP (immediately Power Supply OFF)
H	AUDIO IC	

## &lt; No. 3 Subcategory Information on "Digital tuner" &gt;

Value	Shutdown Factor	Remarks (Operation)
0	Non subcategory	
1	DTV starting failure	PS/RST (The history is left, and intercepts it the communication)
2	DTV communication failure	RETRY (The history is left, and intercepts it the communication)

## &lt; No. 4 Subcategory Information on "POWER" &gt;

Value	Shutdown Factor	Remarks (Operation)
1	DCDC Converter heden	M-DCDC (immediately Power Supply OFF)
2	Relay Power supply heden	RELAY (immediately Power Supply OFF)

## 9.3.12 DRV

Drive ON/OFF: ON/OFF control for only the large-power system

Command Format	Effective Operation Modes	Function	Remarks
[DRV+S00]	Every time	DRIVE OFF	At standby mode, when 10 seconds passed after issuing [DRV+S00], command becomes invalid.
[DRV+S01]	Every time	DRIVE ON	

### ■ Setting for Factory mode permission/prohibition ••• [FAY/FAN]

The commands FAY/FAN are for prohibiting/permitting panel-adjustment commands.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAY]	Normal operation mode while the power is on	Adjust command is valid.	Mask indications will be forcibly turned off.
[FAN]	During FAY	Adjust command is invalid.	

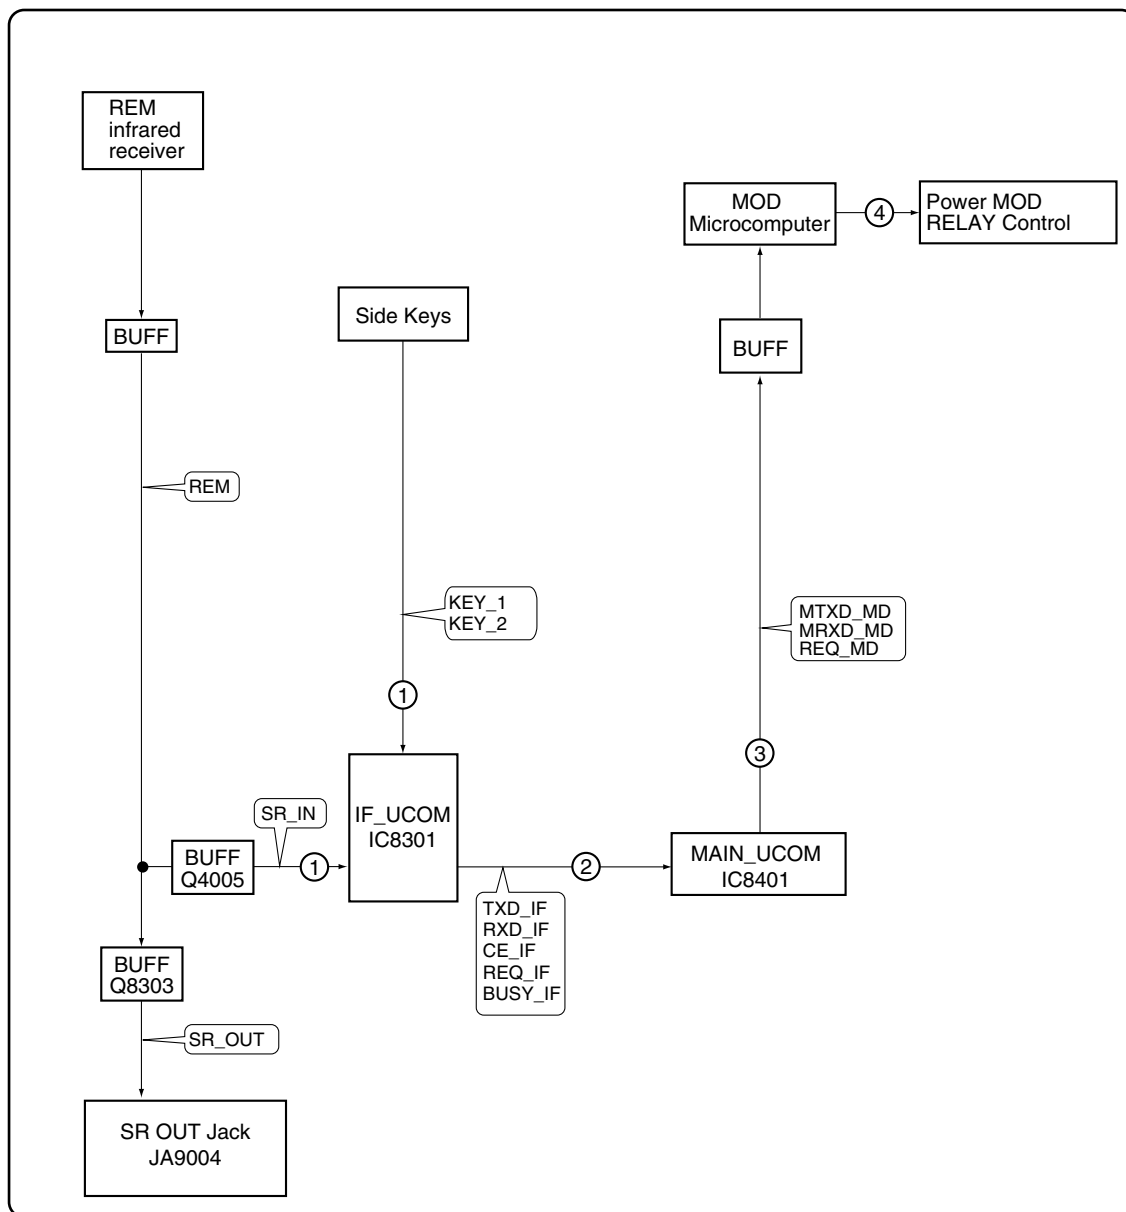

### ■ Backup function for adjustment values for the main unit ••• [FAJ/UAJ/CBU/BCP]

When the DIGITAL Assy is to be replaced, adjustment values can be copied from the backup EEPROM to the EEPROM of the Assy for service.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAJ]	During FAY	To make the flag setting that indicating that adjustment of the panel unit has been completed	Writing 00 to the 4 k byte ROM and copying to the 2 k byte ROM
[UAJ]		To make the flag setting that indicating that adjustment of the main unit has not been completed	Writing F0 to the 4 k byte ROM
[CBU]		To make the flag setting that indicating that backup data have not been copied	Writing F0 to the 2 k byte ROM
[BCP]		To copy Digital backup data to EEPROM	Copying backup data

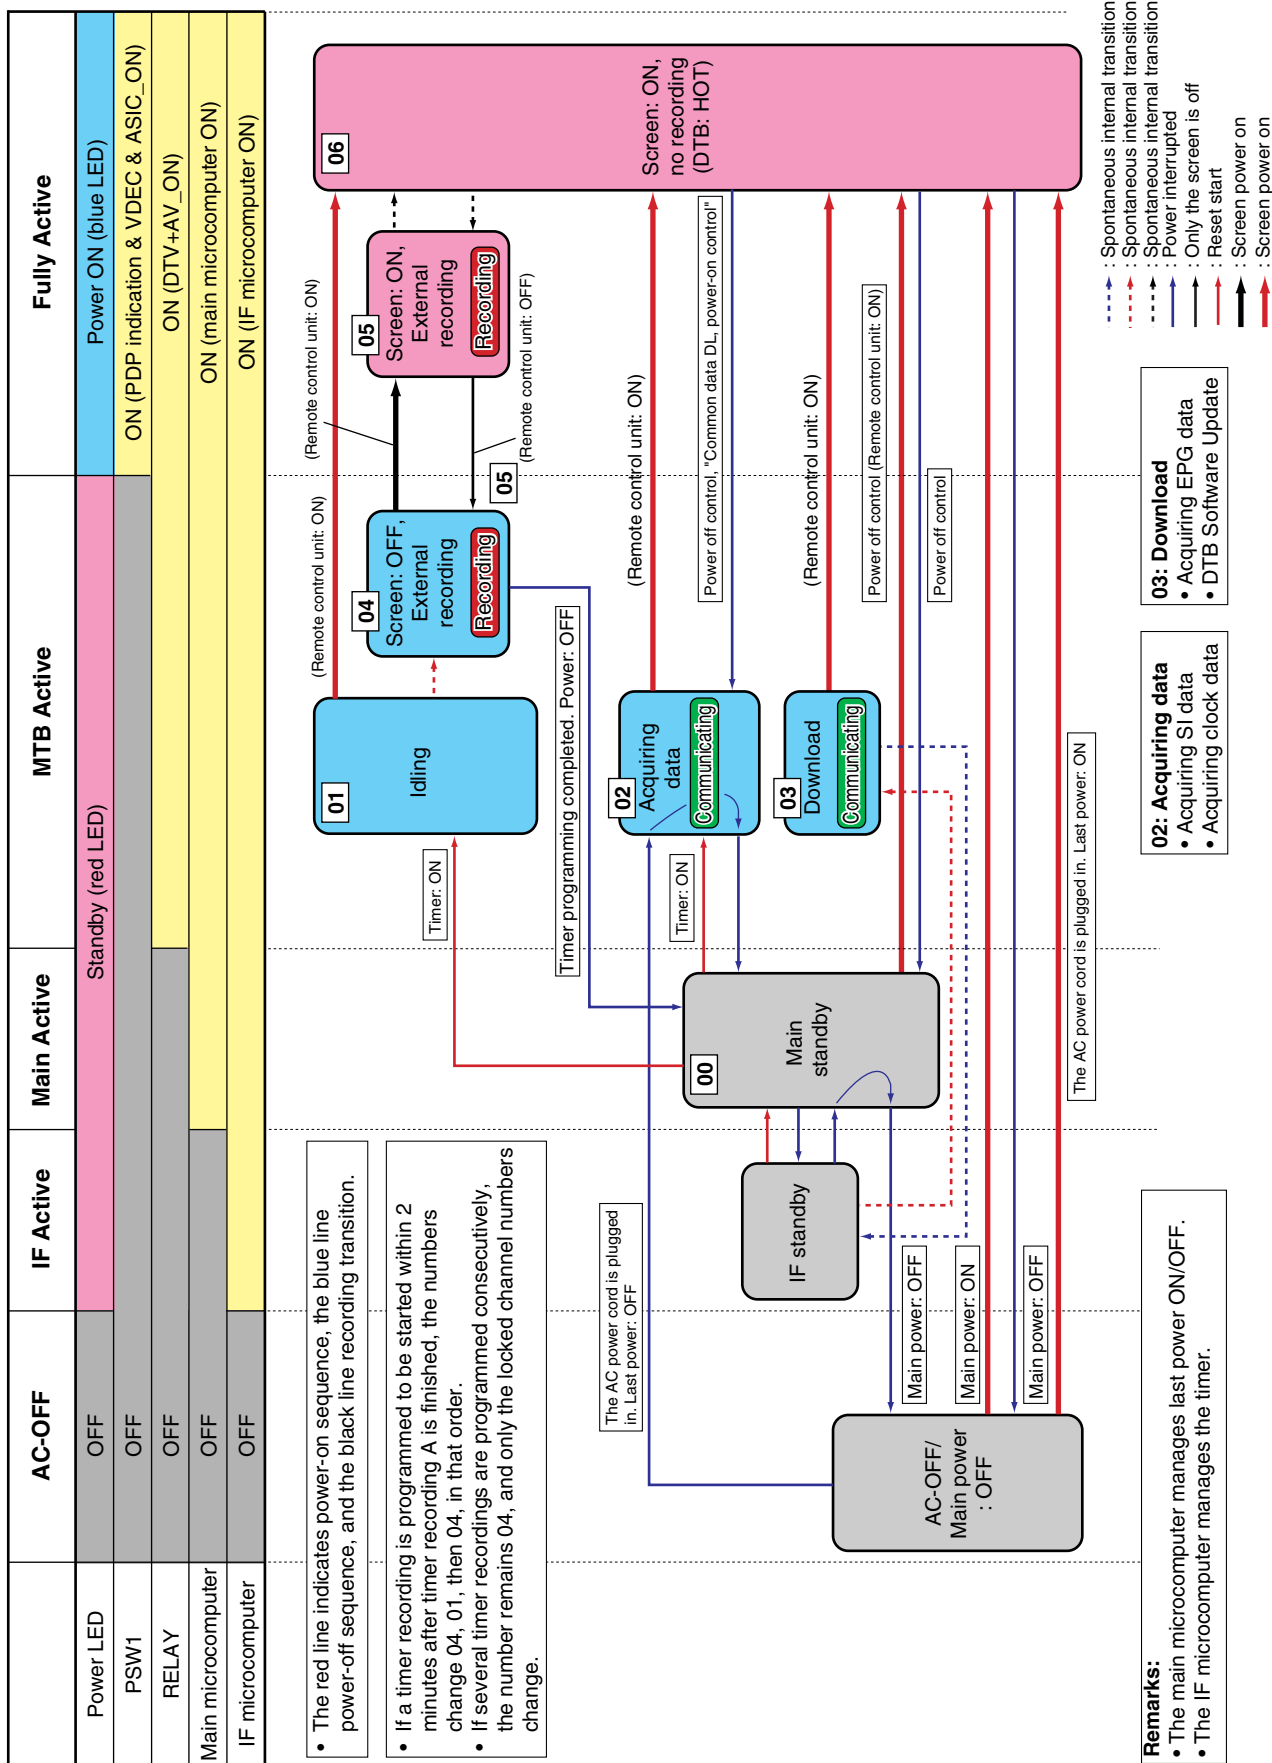

# 10. GENERAL INFORMATION

## 10.1 POWER ON SEQUENCE

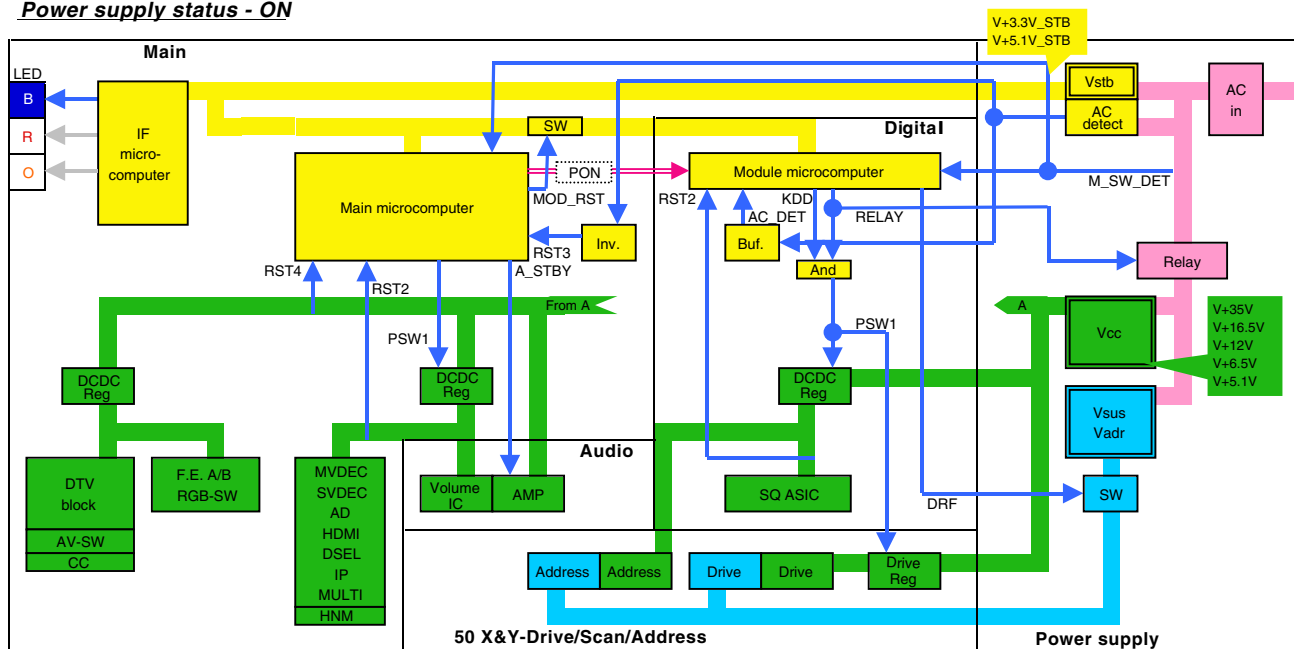

- ① : The remote control (or KEY) signal is input to the IF microcomputer.
- ② : The IF microcomputer sends the operation data to the main microcomputer.
- ③ : The main microcomputer issues a startup command to the MOD microcomputer.
- ④ : The MOD microcomputer controls the relay of the power MOD of the PDP to startup the power of the PDP.

## 10.2 POWER SUPPLY TRANSITION STATUS

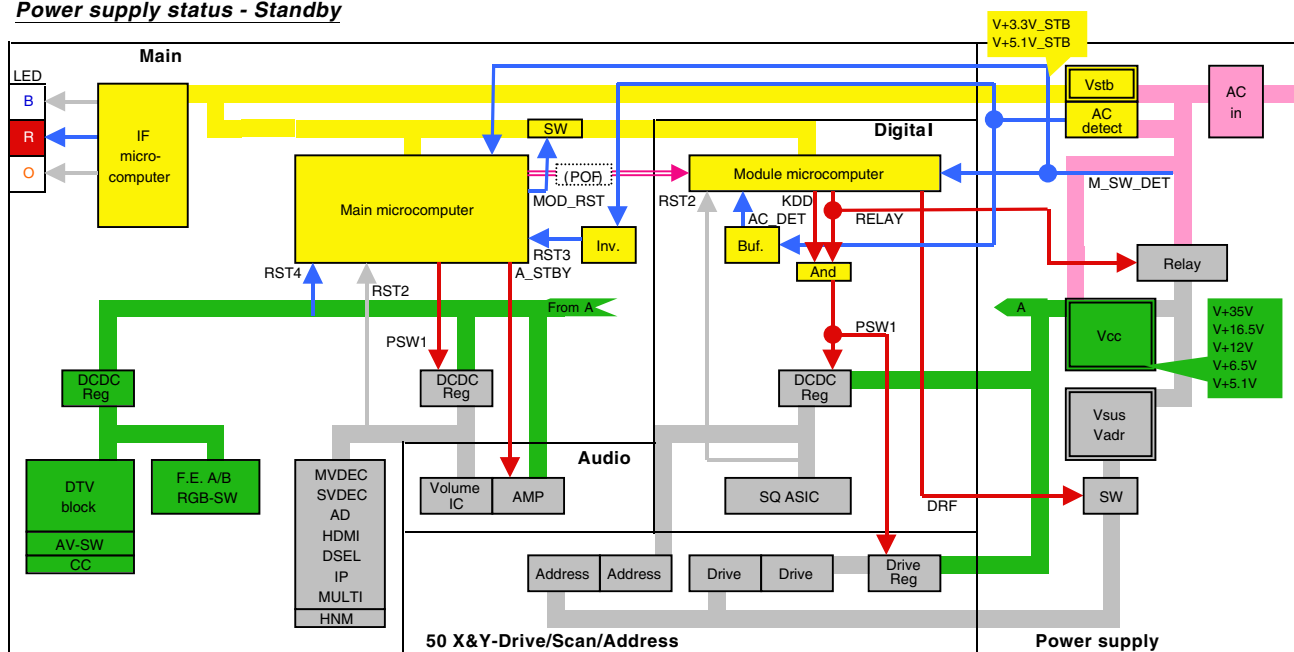

A

**Power supply status - ON**

B

C

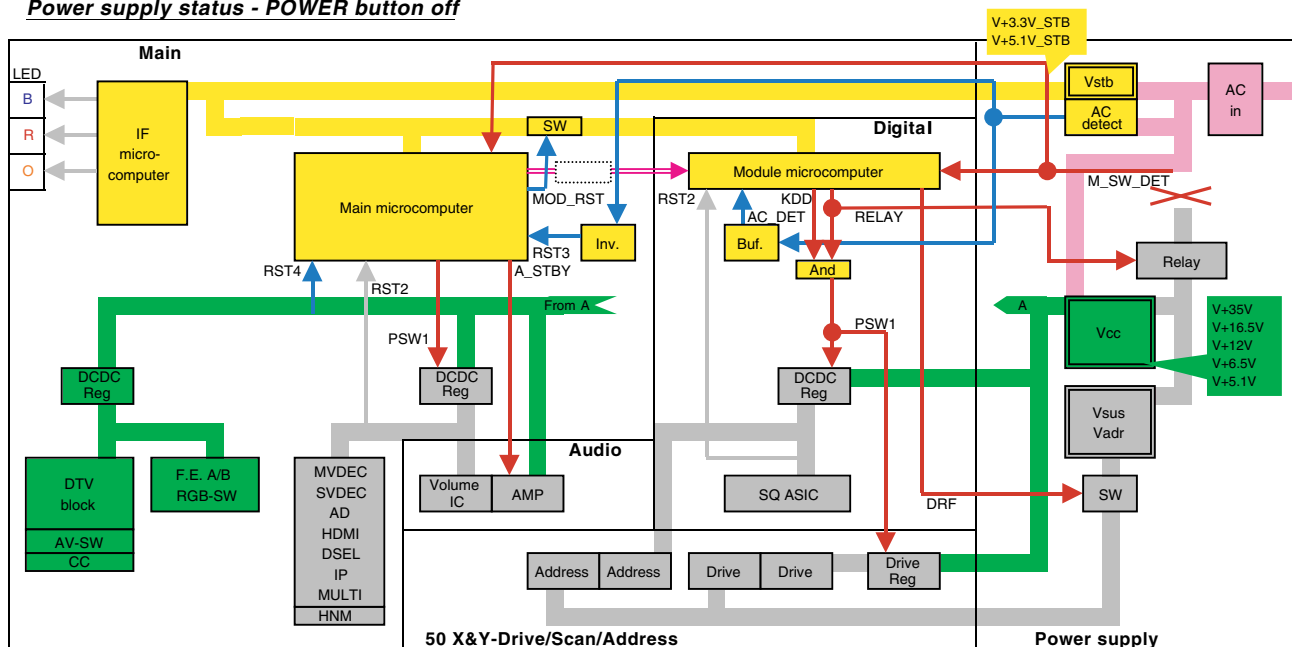

**Power supply status - Standby**

D

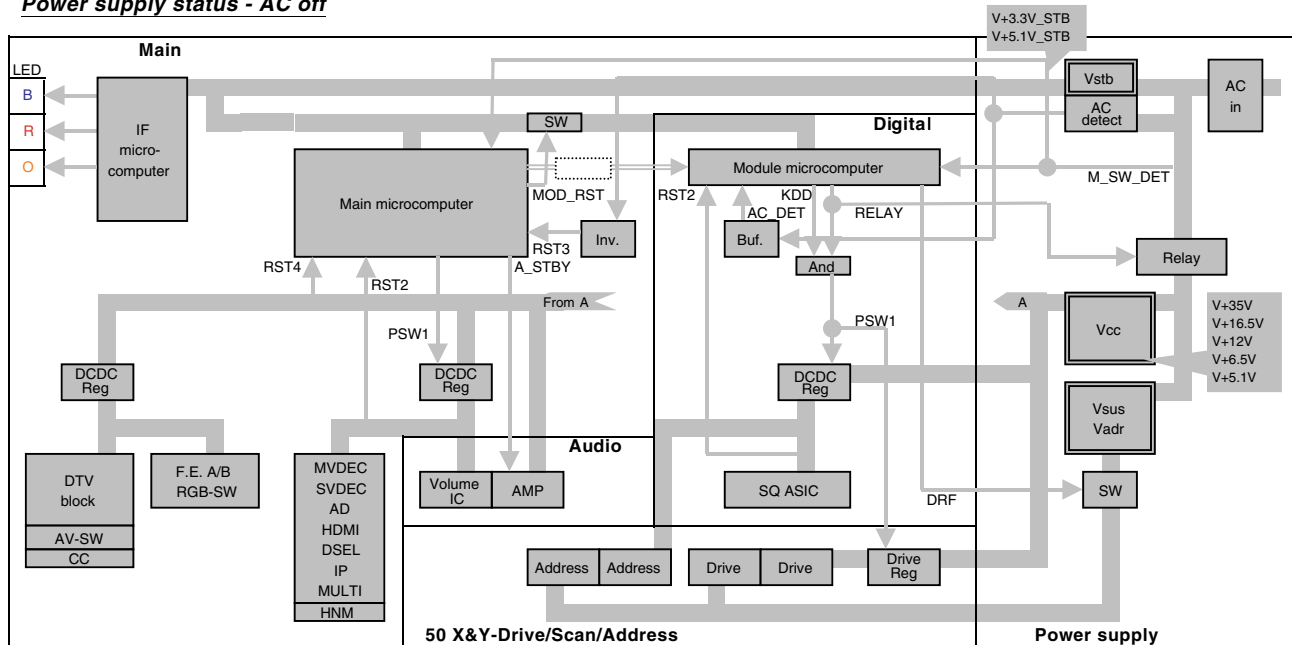

E

F

### Power supply status - POWER button off

### Power supply status - AC off

## 10.3 POWER ON/OFF FUNCTION FOR THE LARGE-SIGNAL SYSTEM

**Function:** It is an operational mode where the digital signal processing performs circuit operation but the power is not supplied to the panel driving system (large signal system) in order to avoid a power down.

**Application:**

1. When it is necessary to check whether the signal output is correctly reaching the drive system in a repairing activity etc.
2. In the case of a PD, to determine whether the problem is with the large signal system power supply or with the small signal system power supply.

**Method:**

1. Make shorting between the specified location (refer to the illustration below) of the PCB surface of the 50 DIGITAL ASSY and the nearby pattern.
2. Execute [DRV S00] by RS232C command. ([DRV S01] for release)

**Supplemental explanation:**

- When the large signal system power supply is in OFF state, there will be no PD, except PS\_PD, as the PD signal has been muted.
- If the clip is removed in the OFF state of the large signal system power supply, PD will take place at the instance of clip removal. Therefore, be sure to remove the clip after turning the power OFF.
- Under RS232C command control, [DRVS01] (release) is possible during power ON. However, there is a possibility of damaging the set. Therefore, make this operation only after turning the power OFF.
- Command [DRVS00/S01] is effective even during standby. When the main power is turned OFF, however, [DRVS01] (release) will be effective.

# 10.4 LED INFORMATION

## LED Pattern

State	LED Pattern			
AC OFF or Main power switch OFF	Blue Red Orange			
Standby power management	Blue Red Orange			
Power ON	Blue Red Orange			
Power-down	Blue Red Orange	Once 500 msec Twice n times 2.5 sec Once		
Shutdown	Blue Red Orange	Once 500 msec Twice n times 2.5 sec Once		
No digital adjustment data copied for backup	Blue Red Orange	200 msec		
In the process of rewriting the program of the microcomputer	Blue Red Orange	100 msec 100 msec		
During reservation video recordings (Unit: Standby)	Blue Red Orange		PDP- 507XD only	
During factory operation During reservation video recordings (Unit: ON) *1 During sleep timer operation (*2)	Blue Red Orange			
RS-232C <=> SR+ switch	Blue Red Orange	200 msec		

\*1: PDP-507XD types

\*2: PDP-507XA types

10.5 SPECIFICATION ABOUT THE THERMAL PROTECTION

\* The change of HI / LO have hysteresis curve below.

■ Reading Value of the Sensor and FAN Drive

Assign			AD Value 10 bit	Aims (Sensor Position)	Aims (Outside Air)
Pin 76	TEMP2	T4 setting	440	55 °C	55 °C
		T3 setting	568	40 °C	40 °C
		T2 setting	592	37 °C	37 °C
		T1 setting	627	33 °C	33 °C
		T0 setting	653	30 °C	30 °C

Assign	FAN: HIGH	FAN: LO	STOP
Pin 149 (FAN_CONT)	H	H	L
Pin 17 (FAN_CONT_POW)	H	L	–

■ Unit State and Fan Drive

POWER	PSW1	State	Control	FAN Operation
ON	ON	ON	According to the reading value of above table sensor.	HIGH or LO
ON	ON	DT_REC	According to the reading value of above table sensor.	HIGH or LO
OFF	–	STB	FAN_CONT: "L"	OFF

[System block diagram]

■ Operation when executing FAN control command

When executing [FCNS00], [FCNS01], [FCNS02] command, detect the FAN\_NG signal. When NG is detected, it becomes shutdown.  
When [FCNS03] command is executed, FAN\_NG detection is not operated.

### Speaker short-circuit

### ● Specifications for port monitoring

Port Name	SD/PD Indication	Assigned Pin	Active
A_NG_B	AUDIO		Shutdown with L

## Power supply and DC-DC converter

- **Circuit diagram**

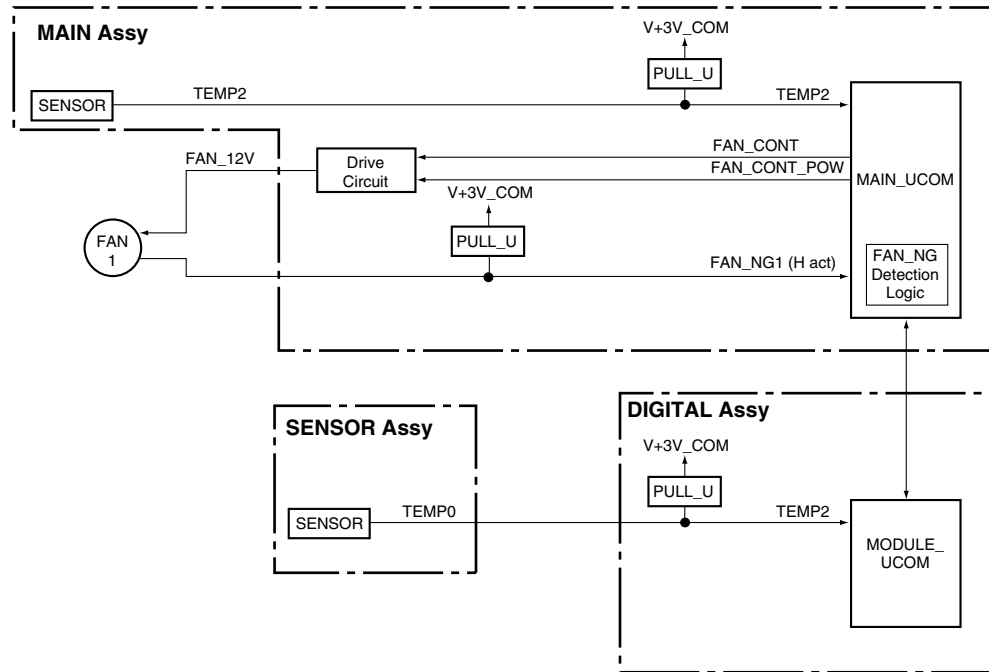

### ● Specifications for port monitoring

Port Name	SD/PD Indication	Assigned Pin	Active
RST2	ASIC power		Shutdown with L
RST3	AC power		AC_OFF with H
RST4	MAIN power		Shutdown with L

## Fan and temperature sensor

### ● Circuit diagram

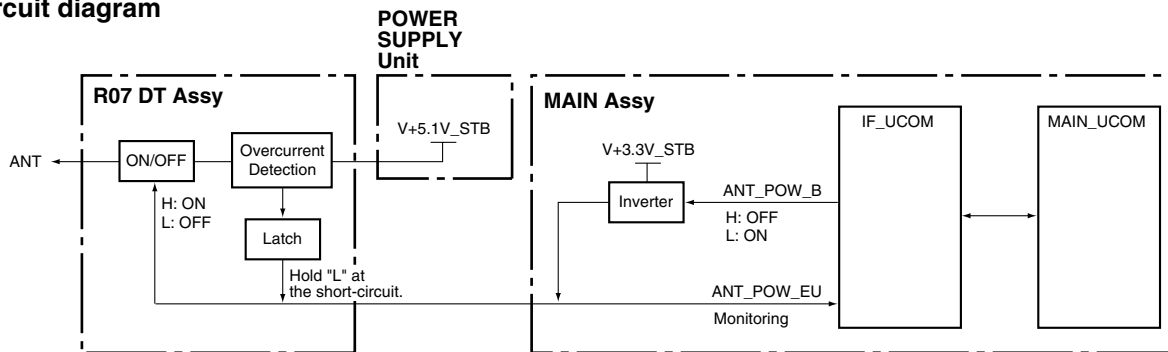

### ● Specifications for port monitoring

Port Name	SD/PD Indication	Assigned Pin	Active
FAN_NG 1	FAN		Shutdown with H
TEMP2	Abnormally high temperature in the MR		Shutdown when the value exceeds the predetermined value
TEMP0	Abnormally high temperature in the Drive circuit		Shutdown when the value exceeds the predetermined value

## DTB antenna power supply

### ● Circuit diagram

### ● Specifications for port monitoring

Port Name	SD/PD Indication	Assigned Pin	Active
ANT_POW_EU	DTB antenna short	IF_37	Warning with L

# 11. SPECIFICATIONS

## 11.1 MAIN SPECIFICATIONS

Item			50" Plasma Television, Model: PDP-507XD		Model: PDP-507XA	
Number of Pixels			1365 x 768 pixels		1365 x 768 pixels	
Audio Amplifier			13 W + 13 W (1 kHz, 10 %, 8 )		13 W + 13 W (1 kHz, 10 %, 8 )	
Speakers			—		—	
Surround System			SRS/FOCUS/TruBass		SRS/FOCUS/TruBass	
Power Requirement			220 V to 240 V AC, 50 Hz/60 Hz, 348 W (0.7 W Standby)		220 V to 240 V AC, 50 Hz/60 Hz, 341 W (0.3 W Standby)	
Dimensions			1224 mm (W) x 717 mm (H) x 115 mm (D)		1224 mm (W) x 717 mm (H) x 115 mm (D)	
Weight			34.7 kg (76.5 lbs.)		34.1 kg (75.2 lbs.)	
Colour System		Analogue	PAL/SECAM/NTSC 3.58/NTSC 4.43/PAL 60			
		Digital	PAL/SECAM			
TV Function (Analogue)	Receiving System		B/G, D/K, I, L/Lí			
	Tuner	VHF/UHF	E2–E69ch, F2–F10ch, I21–I69ch, IR A–IR Jch			
		CATV	Hyper-band, S1ñS41ch			
	Auto Channel Preset		99 ch, Auto Preset, Auto Label, Auto Sort			
	STEREO		NICAM/A2			
TV Function (Digital) (*)	Receiving System		DVB-T (2K/8K COFDM)			
	Tuner	VHF/UHF	VHF Band III (170 MHz to 230 MHz) and UHF Band IV, V (470 MHz to 862 MHz)			
	Auto Channel Preset		999 ch, Auto Preset, Auto Label, Auto Sort			
	STEREO		MPEG layer I/II, Dolby Digital			
Terminals	Rear	INPUT 1	SCART (AV in, RGB in, TV out)			
		INPUT 2	SCART (AV in/out, S-VIDEO in, AV link *1) Component Video			
		INPUT 3	SCART (AV in/out, S-VIDEO in, RGB in, AV link *1), HDMI in*2			
		INPUT 4	HDMI in*2			
		CONTROL OUT	1			
		SPEAKER	8 to 16			
		Antenna	75 Din Type for VHF/UHF in (Analogue)			
			75 Din Type for VHF/UHF in (Digital) (*)			
			75 Din Type for VHF/UHF out (Digital) (*)			
	PC	Analogue RGB in PC INPUT (AUDIO)				
	Side	INPUT 5	S-VIDEO, AV in			
	AUDIO OUTPUT Terminal		(Rear)	AUDIO out (Fixed)		
SUB WOOFER OUTPUT Terminal		(Rear)	Variable			
PHONES OUTPUT Terminal		(Side)	16 to 32 recommended			
DIGITAL OUT Terminal (*)		(Rear)	Digital audio output (Optical)			
COMMON INTERFACE (*)		(Rear)	CA Module			

\*1 Selectable from the menu (\*) : PDP-507XD Only

\*2 This conforms to HDMI1.1 and HDCP1.1.  
HDMI (High Definition Multimedia Interface) is a digital interface that handles both video and audio using a single cable.  
HDCP (High-bandwidth Digital Content Protection) is a technology used to protect copyrighted digital contents that use the Digital Visual Interface (DVI).  
Design and specifications are subject to change without notice.

| 7 INPUT 3/INPUT 4 terminals (HDMI)            | 18 SPEAKER (right/left) terminals                |
| 8 RS-232C terminal (used for factory setup)   |  |
| 9 ANT (Antenna) input terminal                |  |

## A Remote control unit

This section describes the functions of the buttons available when the TV mode has been selected using the **SELECT** button. For the buttons for controlling other equipment, see "Controlling other equipment using the supplied remote control unit".

(\*) : PDP-507XD  
Only

### 8 TV/DTV

Switches between the TV and DTV input modes.

### 9 SELECT

Switches the selection among TV, STB, DVD/DVR, and VCR, so that you can control other equipment in connection, using the supplied remote control unit.

### 10 TV, STB, DVD/DVR, VCR

These indicators show the current selection and status when you control other equipment in connection using the supplied remote control unit.

### 11 RETURN

Restores the previous menu screen.

### 12 ↑/↓/←/→

Selects a desired item on the setting screen.

### ENTER

Executes a command.

### 13 EXIT

Returns to the normal screen in one step.

### 14 Colour (RED/GREEN/YELLOW/BLUE)

TELETEXT mode: Selects a page.

### 15 ...

TV/External input mode: Jumps to the Teletext subtitle page.

DTV input mode: Turns subtitle on and off.

### 16 [E]

TELETEXT mode: Displays hidden characters.

### 17 I-II

Sets the sound multiplex mode.

### 18 [i+] INFO

TV/External input mode: Displays the channel information.

DTV input mode: Displays the banner information.

### 19 [P]

Moves the location of the small screen when in the picture-in-picture mode.

### 20 [↔]

Switches between the two screens when in the 2-screen or picture-in-picture mode.

### 21 [+/−]

Sets the volume.

### 22 [M]

Mutes the sound.

### 23 HOME MENU

TV/External Input mode: Displays the Menu screen.

### 24 EPG

Display the Electronic Programme Guide. (\*)

### 25 [≡]

Selects the TELETEXT mode.

(all TV image, all TEXT image, TV/TEXT image)

### 26 [E]

TELETEXT mode: Displays an Index page for the CEEFAX/FLOF format. Displays a TOP Over View page for the TOP format.

### 27 [H]

TV/External input mode: Selects the screen size.

### [E]

TELETEXT mode: Switches Teletext images. (full/upper half/lower half)

### 28 [H]

TV/External input mode: Free zes a frame from a moving image. Press again to cancel the function.

### [E]

TELETEXT mode: Stops updating Teletext pages. Press again to release the hold mode.

## NOTE

When using the remote control unit, point it at the Plasma Television.

# 12. IC INFORMATION

• The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

## ● List of IC

SN755870KPZT, R2S11002AFT, R2S11001FT, UPD64015AGM-UEU, AD9985KSTZ-110, SII9023CTU, LTC3414EFE, LTC3412EFE, S1170B25UC-OTA, S1170B15UC-OTA, NJU26901E2

## ● PIN LAYOUT (Top View)

## ● BLOCK DIAGRAM

## A ● PIN FUNNCTION

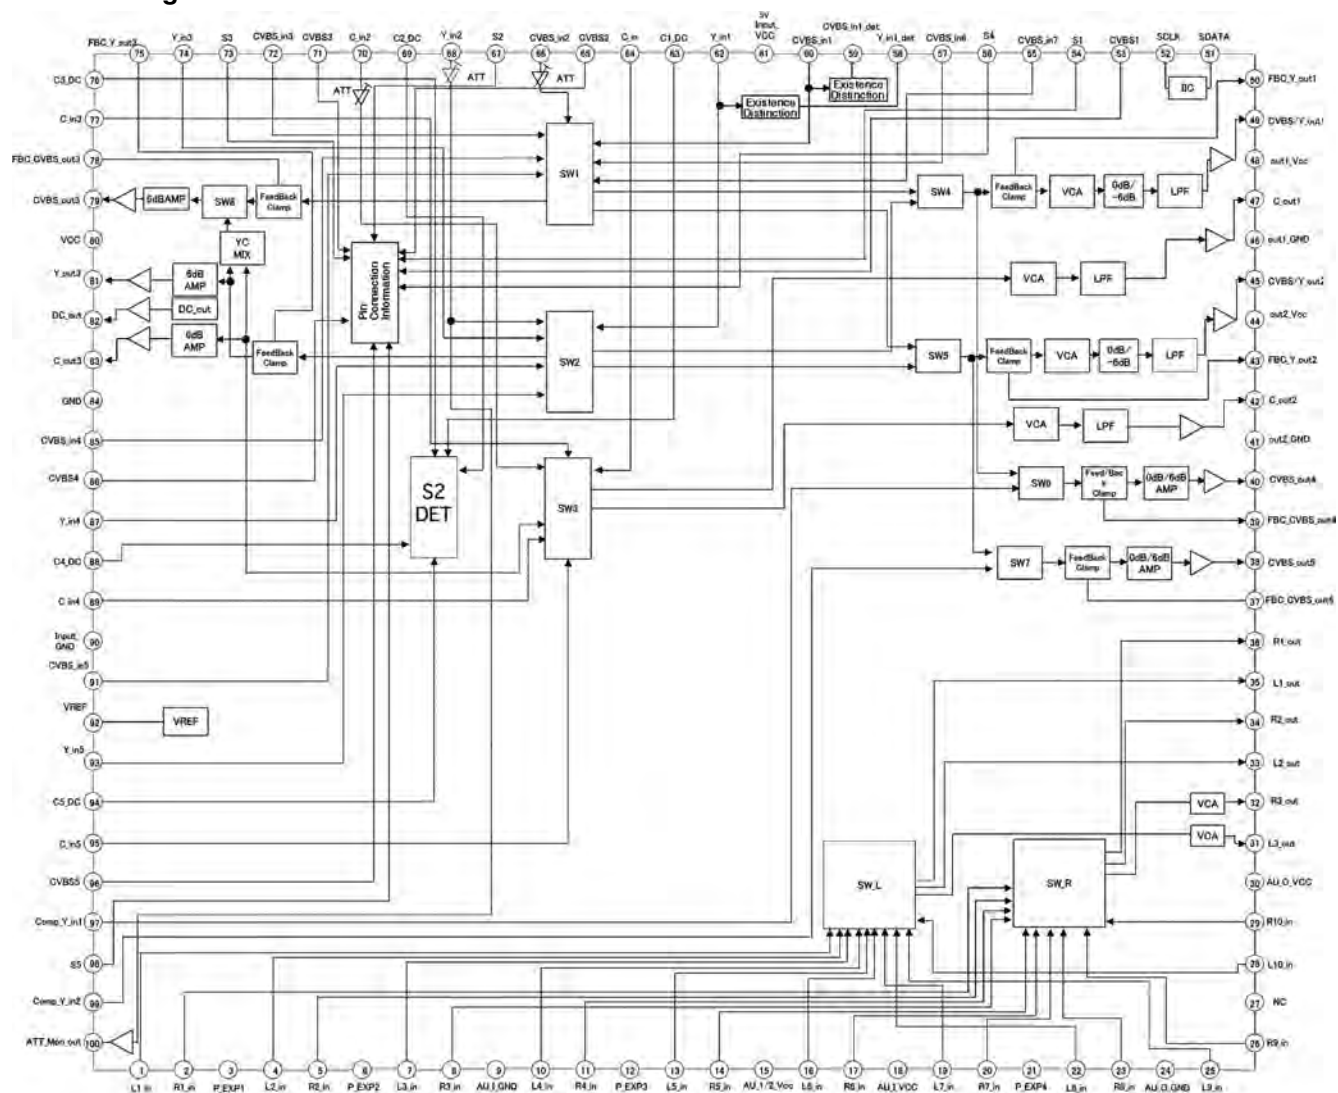

No.	Pin Name	I/O	Pin Function
1 - 30	OUT3 - OUT32	O	High-voltage push-pull output
31	N.C.	–	Not used
32 - 33	VDDH	–	Power for High-voltage circuit
34	N.C.	–	Not used
35 - 37	GND1	–	GND
38	N.C.	–	Not used
39	GND2	–	GND
40 - 41	GND1	–	GND
42	N.C.	–	Not used
43 - 44	VDDH	–	Power for High-voltage circuit
45	N.C.	–	Not used
46 - 77	OUT33 - OUT64	O	High-voltage push-pull output
78	N.C.	–	Not used
79 - 80	VDDH	–	Power for High-voltage circuit
81	N.C.	–	Not used
82 - 83	GND1	–	GND
84	DIR	I	Setting the shift direction of shift-register L : reverse side shift (SO→SI), H : forward side shift (SI→SO)
85	SO	I/O	Serial data In/Out
86	CLK	I	Serial clock Input    Down-side edge trigger
87	LAT	I	LAT data Input L : The data of shiftregister is transferred to ouput latch. H : The ouput data of latch is holded.
88	VDD	–	Power for Logic circuit
89	OC1	I	Output control Output is controlled by truth table right side.
90	OC2	I	
91	SI	I/O	Serial data In/Out
92	CLR	I	All output reset   CLR terminal : L → normal operation, CLR terminal : H→ All output "H"
93 - 94	GND1	–	GND
95	N.C.	–	Not used
96 - 97	VDDH	–	Power for High-voltage circuit
98	N.C.	–	Not used
99 - 100	OUT1 - OUT2	O	High-voltage push-pull output

OC1	OC2	OUT
L	L	ALL Hi-Z
L	H	DATA
H	L	ALL L
H	H	ALL H

## ● Pin Function

### 2.1 Power supply/ground terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
AVDD1	138	—	—	—	Analog 1.5V power supply Connect to the 1.5V power supply. Separate it from the other terminals via a filter.
AVDD3	141	—	—	—	Analog 3.3V power supply Connect to the 3.3V power supply. Separate it from the other terminals via a filter.
	155,156,167,168	—	—	—	Analog 3.3V power supply for ADC. Connect to the 3.3V power supply. Separate it from the other power lines via a filter.
AVDDA	61,64,67	—	—	—	Analog 3.3V power supply for DAC. Connect to the 3.3V power supply. Separate it from the other power lines via a filter.
AGND	143,144,145,175,176	—	—	—	Analog ground
AGNDA	58,63,66,69	—	—	—	Analog ground (for DAC)
DVDD1	16,23,27,32,39,48, 57,70,76,81,92,103, 115,125,133	—	—	—	Digital 1.5V power supply Connect to the 1.5V power supply.
DVDD3	1,11,26,44,53,88,98, 109,120,132	—	—	—	Digital 3.3V power supply Connect to the 3.3V power supply.
DGND	17,24,33,38,45,56, 80,89,93,104,114, 126	—	—	—	Digital ground

### 2.2 System reset terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
RSTB	74	I	Schmitt	—	System reset input (Active-Low)

## ● Pin Function

### 2.3 I2C bus interface terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
RGRED	75	O	LVTTL N-ch open drain	6 mA	I <sup>2</sup> C register lead flag output (Active-Low)
SCL	71	I	LVTTL	Fail-safe	I <sup>2</sup> C bus clock input Connect to the SCL line of the system.
SDA	72	I/O	LVTTL N-ch open drain	Fail-safe 6 mA	I <sup>2</sup> C bus data input/output Connect to the SDA line of the system.
SLA0	73	I	LVTTL	—	I <sup>2</sup> C bus slave address selection input (L : B8h/B9h, H : BAh/BBh ) Connect to GND when set to low level and to DVDD3 (3.3V) when set to high level.

### 2.4 Terminal for test

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
SCKSET	2	I	LVTTL	—	Test mode selection (L: normal, H: test mode)
TEST	3	I	LVTTL	—	Test setting (L: normal, H: test mode)
FCKM	77	I	LVTTL	—	FCLK8 test mode selection (L: normal, H: test mode)
BCKM	111	I	LVTTL	—	Test mode selection of BCLK8 terminal. (L: normal, H: test mode)
ATS1	139	I	Analog	—	Analog test input Connect to GND normally.
ATS2	140	I	Analog	—	Analog test input Connect to GND normally.
ATS3	142	I	Analog	—	Analog test input Connect to GND normally.
VLPF1	149	O	Analog	—	Analog test output Connect to GND via a 0.1μF capacitor.
VLPF2	171	O	Analog	—	Analog test output Connect to GND via a 0.1μF capacitor.

**Caution: Connect these terminals for test to GND unless otherwise instructed.**

## ● Pin Function

### 2.5 Clock generator terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
XI	55	I	Analog	—	Reference clock input Connect 24.576MHz crystal oscillator.
XO	54	O	Analog	—	Reference clock output Connect 24.576MHz crystal oscillator.
BCLK8	102	I/O	LVTTL 3-state	6 mA	Subsequent stage line lock clock monitor input/output It will become Hi-Z when BCK8OUT (SA1Fh, D5)=0. Normally, set to BCK8OUT=0 and leave it open.

### 2.6 Terminal for $\mu$ PD64031A and $\mu$ PD64032 digital connection

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
FCLK8	78	I/O	LVTTL 3-state	6 mA	Front stage burst lock clock input/output It will become Hi-Z when FCK8S[2:0] (SA21h, D6-D4)=000b. Normally, set to FCK8S[2:0]=0 and leave it open.
FCKQ	127	I/O	LVTTL 3-state	3 mA	Sampling clock output for $\mu$ PD64031A and $\mu$ PD64032 digital connection. It will become Hi-Z when FCKQS[2:0] (SA21h, D2-D0)=000b. Normally, set to FCKQS[2:0]=0 and leave it open.
FOCP	128	I/O	LVTTL 3-state	3 mA	Clamp pulse output for $\mu$ PD64031A and $\mu$ PD64032 digital connection/timing output (VD) for digital RGB input. It will become Hi-Z when FOCPS[2:0] (SA23h, D2-D0)=000b. Normally, set to FOCPS[2:0]=0 and leave it open.

### 2.7 Terminal for RGB input

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
DFBI	130	I	LVTTL	—	Fast Blanking signal input for analog RGB input.
DYSI	131	I	LVTTL	—	YS signal input for digital RGB input.
DYMI	134	I	LVTTL	—	YM signal input for digital RGB input.
DCGI	135	I	LVTTL	—	Digital RGB/G signal input
DCBI	136	I	LVTTL	—	Digital RGB/B signal input
DCRI	137	I	LVTTL	—	Digital RGB/R signal input
FCSI	129	I/O	LVTTL 3-state	3 mA	Sync separation signal input/timing output (HD) for RGB input. It will become Hi-Z when FCSIS[2:0] (SA22h, D2-D0)=000b. Normally, set to FCSIS[2:0]=0 and leave it open.

## ● Pin Function

### 2.8 ADC1 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
AVI	148	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
ASYI	150	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
ACYI	152	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
ACSI	154	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
VCLY	146	O	Analog	—	ADC1 clamp electric potential Connect to GND via 0.1μF and 10μF capacitors.
VCOM1	147	I	Analog	—	ADC1 in-phase reference voltage Connect to GND via a 0.1μF capacitor.
VRB1	151	I	Analog	—	ADC1 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VRT1	153	I	Analog	—	ADC1 top reference voltage Connect to GND via a 0.1μF capacitor.

### 2.9 ADC2 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
ASCI	158	I	Analog	—	ADC2 separate C signal input Input the image signal by cutting the capacity.
AGI	160	I	Analog	—	ADC2 RGB component G signal input Input the image signal by cutting the capacity.
VRT2	157	I	Analog	—	ADC2 top reference voltage Connect to GND via a 0.1μF capacitor.
VRB2	159	I	Analog	—	ADC2 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VCOM2	161	I	Analog	—	ADC2 in-phase reference voltage Connect to GND via a 0.1μF capacitor.

## ● Pin Function

### 2.10 ACD3 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
ACBI	162	I	Analog	—	ADC3 color difference component Cb signal input Input the image signal by cutting the capacity.
ABI	164	I	Analog	—	ADC3 RGB component B signal input Input the image signal by cutting the capacity.
VRT3	163	I	Analog	—	ADC3 top reference voltage Connect to GND via a 0.1μF capacitor.
VRB3	165	I	Analog	—	ADC3 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VCOM3	166	I	Analog	—	ADC3 in-phase reference voltage Connect to GND via a 0.1μF capacitor.

### 2.11 ACD4 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
ACRI	170	I	Analog	—	ADC4 color difference component Cr signal input Input the image signal by cutting the capacity.
ARI	172	I	Analog	—	ADC3 RGB component R signal input Input the image signal by cutting the capacity.
VCOM4	169	I	Analog	—	ADC4 in-phase reference voltage Connect to GND via a 0.1μF capacitor.
VRB4	173	I	Analog	—	ADC4 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VRT4	174	I	Analog	—	ADC4 top reference voltage Connect to GND via a 0.1μF capacitor.

### 2.12 DAC section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
IO-YG	62	O	Analog	—	Color difference component Y/RGB component G output signal. Connect to AGNDA via a 200Ω load resistance.
IO-CR	68	O	Analog	—	Color difference component Cr/RGB component R output signal. Connect to AGNDA via a 200Ω load resistance.
IO-CB	65	O	Analog	—	Color difference component Cb/RGB component B output signal. Connect to AGNDA via a 200Ω load resistance.
REF	59	I	Analog	—	External reference input pin. Supply 1.0V. And, connect to AGNDA via a 0.1μF capacitor.
RSET	60	O	Analog	—	Connect to AGNDA via a 620Ω resistor for external adjustment.

## ● Pin Function

### 2.13 Digital image input/output terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
FDIO0-FDIO9	112,113,116, 117,118,119, 121,122,123, 124	I/O	LVTTL 3-state	6 mA	Digital 8/10 bit Cb, Cr output/input at the time of μPD64031A digital connection. It will become Hi-Z when FDIOS[2:0] (SA22h, D6-D4)=000b. Leave it open when not in use.
ROCK	101	O	LVTTL 3-state	6 mA	Clock for digital ITU-R BT.656/component output.
ROY0-ROY13	100,99,97,96, 95,94,91,90, 87,86,85,84, 83,82	O	LVTTL 3-state	6 mA	Digital ITU-R BT.656/component output. Digital RGB component (8 bit) output
ROFDIE	79	I	LVTTL	—	Image input/output terminal output enable. The state of ROY[13:0], ROCK, HD, VD, VBLK, FILD and RDEO terminals is controlled. L: Output terminal Hi-Z, H: Output enable Normally, pull up to 3.3V.

### 2.14 timing output terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
HD	105	O	LVTTL 3-state	3 mA	Horizontal sync signal output
VD	106	O	LVTTL 3-state	3 mA	Vertical sync signal output
VBLK	107	O	LVTTL 3-state	3 mA	V blanking output
FILD	108	O	LVTTL 3-state	3 mA	Field output
RDEO	110	O	LVTTL 3-state	3 mA	Effective pixel range output

## ● Pin Function

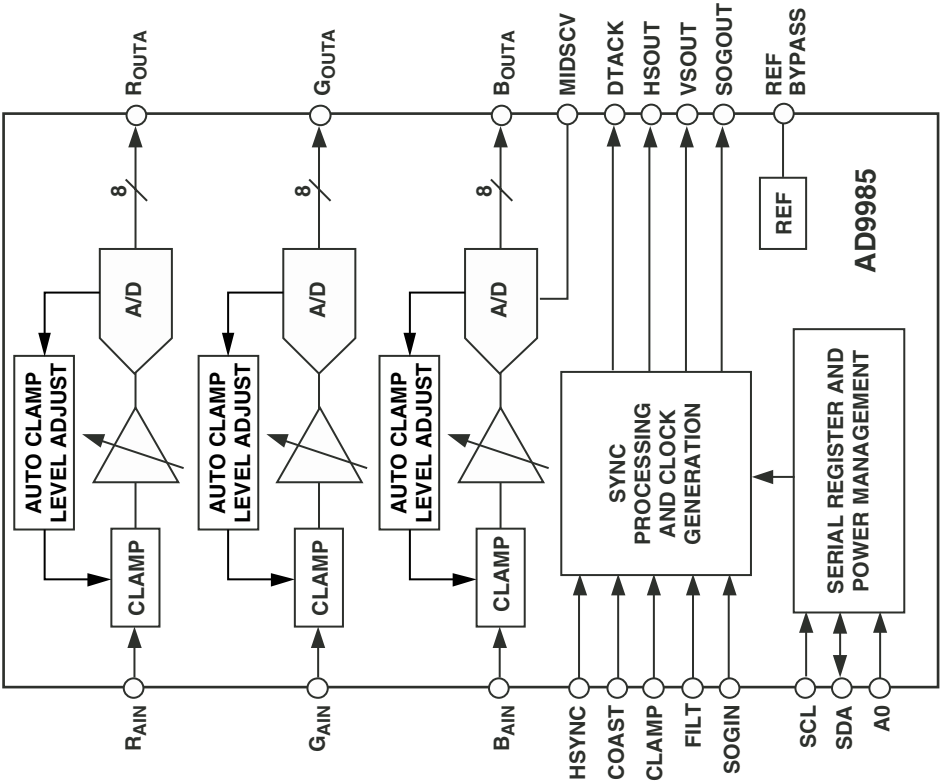

### 2.15 Memory interface terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
SDRABP	4	O	LVTTL 3-state	3 mA	All bank pre-charge output for external memory (Active-High)
SDRCLK	25	O	LVTTL 3-state	9 mA	Clock output for external memory
SDRCKE	21	O	LVTTL 3-state	3 mA	Clock enable output for external memory (Active-High)
SDRCS	20	O	LVTTL 3-state	3 mA	Chip select output for external memory (Active-Low)
SDRCAS	28	O	LVTTL 3-state	3 mA	Column address strobe output for external memory (Active-Low)
SDRRAS	22	O	LVTTL 3-state	3 mA	Low address strobe output for external memory (Active-Low)
SDRWE	29	O	LVTTL 3-state	3 mA	Write enable output for external memory (Active-Low)
SDRA0 -SDRA11	19,18,15,14, 13,12,10,9,8, 7,6,5	O	LVTTL 3-state	3 mA	Address output for external memory Insert a damping resistor of approximately 100Ω, and connect to the SDRAM address terminal.
SDRDQ0 -SDRDQ15	51,49,46,42, 40,36,34,30, 31,35,37,41, 43,47,50,52	I/O	LVTTL 3-state	6 mA	Data input/output for external memory.

AD9985KSTZ-110 (MAIN ASSY : IC5301)

• ADC

## ● Pin Function

Pin Name	Function
<b>OUTPUTS</b>	
HSOUT	Horizontal Sync Output A reconstructed and phase-aligned version of the Hsync input. Both the polarity and duration of this output can be programmed via serial bus registers. By maintaining alignment with DATAACK and Data, data timing with respect to horizontal sync can always be determined.
VSOUT	Vertical Sync Output A reconstructed and phase-aligned version of the video Vsync. The polarity of this output can be controlled via a serial bus bit. The placement and duration in all modes is set by the graphics transmitter.
SOGOUT	Sync-On-Green Slicer Output This pin outputs either the signal from the Sync-on-Green slicer comparator or an unprocessed but delayed version of the Hsync input. See the Sync Processing Block Diagram to view how this pin is connected. (Note: Besides slicing off SOG, the output from this pin gets no other additional processing on the AD9985. Vsync separation is performed via the sync separator.)
<b>SERIAL PORT (2-Wire)</b>	
SDA	Serial Port Data I/O
SCL	Serial Port Data Clock
A0	Serial Port Address Input 1 For a full description of the 2-wire serial register and how it works, refer to the 2-wire serial control port section.
<b>DATA OUTPUTS</b>	
RED	Data Output, Red Channel
GREEN	Data Output, Green Channel
BLUE	Data Output, Blue Channel The main data outputs. Bit 7 is the MSB. The delay from pixel sampling time to output is fixed. When the sampling time is changed by adjusting the PHASE register, the output timing is shifted as well. The DATAACK and HSOUT outputs are also moved, so the timing relationship among the signals is maintained. For exact timing information.
<b>DATA CLOCK OUTPUT</b>	
DATAACK	Data Output Clock The main clock output signal used to strobe the output data and HSOUT into external logic. It is produced by the internal clock generator and is synchronous with the internal pixel sampling clock. When the sampling time is changed by adjusting the PHASE register, the output timing is shifted as well. The Data, DATAACK, and HSOUT outputs are all moved, so the timing relationship among the signals is maintained.
<b>INPUTS</b>	
R <sub>AIN</sub>	Analog Input for Red Channel
G <sub>AIN</sub>	Analog Input for Green Channel
B <sub>AIN</sub>	Analog Input for Blue Channel High impedance inputs that accept the Red, Green, and Blue channel graphics signals, respectively. (The three channels are identical, and can be used for any colors, but colors are assigned for convenient reference.) They accommodate input signals ranging from 0.5 V to 1.0 V full scale. Signals should be ac-coupled to these pins to support clamp operation.
HSYNC	Horizontal Sync Input This input receives a logic signal that establishes the horizontal timing reference and provides the frequency reference for pixel clock generation. The logic sense of this pin is controlled by serial Register 0EH Bit 6 (Hsync Polarity). Only the leading edge of Hsync is active; the trailing edge is ignored. When Hsync Polarity = 0, the falling edge of Hsync is used. When Hsync Polarity = 1, the rising edge is active. The input includes a Schmitt trigger for noise immunity, with a nominal input threshold of 1.5 V.
VSINC	Vertical Sync Input The input for vertical sync.

## ● Pin Function

Pin Name	Function
SOGIN	<p>Sync-on-Green Input</p> <p>This input is provided to assist with processing signals with embedded sync, typically on the Green channel. The pin is connected to a high speed comparator with an internally generated threshold. The threshold level can be programmed in 10 mV steps to any voltage between 10 mV and 330 mV above the negative peak of the input signal. The default voltage threshold is 150 mV. When connected to an ac-coupled graphics signal with embedded sync, it will produce a noninverting digital output on SOGOUT. (This is usually a composite sync signal, containing both vertical and horizontal sync information that must be separated before passing the horizontal sync signal to Hsync.) When not used, this input should be left unconnected. For more details on this function and how it should be configured, refer to the Sync-on-Green section.</p>
CLAMP	<p>External Clamp Input</p> <p>This logic input may be used to define the time during which the input signal is clamped to ground. It should be exercised when the reference dc level is known to be present on the analog input channels, typically during the back porch of the graphics signal. The CLAMP pin is enabled by setting control bit Clamp Function to 1 (Register 0FH, Bit 7, default is 0). When disabled, this pin is ignored and the clamp timing is determined internally by counting a delay and duration from the trailing edge of the Hsync input. The logic sense of this pin is controlled by Clamp Polarity Register 0FH, Bit 6. When not used, this pin must be grounded and Clamp Function programmed to 0.</p>
COAST	<p>Clock Generator Coast Input (Optional)</p> <p>This input may be used to cause the pixel clock generator to stop synchronizing with Hsync and continue producing a clock at its current frequency and phase. This is useful when processing signals from sources that fail to produce horizontal sync pulses during the vertical interval. The COAST signal is generally not required for PC-generated signals. The logic sense of this pin is controlled by Coast Polarity (Register 0FH, Bit 3). When not used, this pin may be grounded and Coast Polarity programmed to 1, or tied HIGH (to V<sub>D</sub> through a 10 k resistor) and Coast Polarity programmed to 0. Coast Polarity defaults to 1 at power-up.</p>
REF BYPASS	<p>Internal Reference BYPASS</p> <p>Bypass for the internal 1.25 V band gap reference. It should be connected to ground through a 0.1 μF capacitor. The absolute accuracy of this reference is ±4%, and the temperature coefficient is ±50 ppm, which is adequate for most AD9985 applications. If higher accuracy is required, an external reference may be employed instead.</p>
MIDSCV	<p>Midscale Voltage Reference BYPASS</p> <p>Bypass for the internal midscale voltage reference. It should be connected to ground through a 0.1 μF capacitor. The exact voltage varies with the gain setting of the Blue channel.</p>
FILT	<p>External Filter Connection</p> <p>For proper operation, the pixel clock generator PLL requires an external filter. Connect the filter shown in Figure to this pin. For optimal performance, minimize noise and parasitics on this node.</p>
<b>POWER SUPPLY</b>	
V <sub>D</sub>	<p>Main Power Supply</p> <p>These pins supply power to the main elements of the circuit. They should be filtered and as quiet as possible.</p>
V <sub>DD</sub>	<p>Digital Output Power Supply</p> <p>A large number of output pins (up to 25) switching at high speed (up to 110 MHz) generates a lot of power supply transients (noise). These supply pins are identified separately from the V<sub>D</sub> pins so special care can be taken to minimize output noise transferred into the sensitive analog circuitry. If the AD9985 is interfacing with lower voltage logic, V<sub>DD</sub> may be connected to a lower supply voltage (as low as 2.5 V) for compatibility.</p>
PV <sub>D</sub>	<p>Clock Generator Power Supply</p> <p>The most sensitive portion of the AD9985 is the clock generation circuitry. These pins provide power to the clock PLL and help the user design for optimal performance. The designer should provide quiet, noise-free power to these pins.</p>
GND	<p>Ground</p> <p>The ground return for all circuitry on-chip. It is recommended that the AD9985 be assembled on a single solid ground plane, with careful attention given to ground current paths.</p>
